To test the physical fitness of the students they are medically examined at the time of registration. In addition to these medical examinations they are further examined in the presence of parents in the third and in the sixth grades as required by the California State Law. They are also examined by physicians often recommended by the class-room teachers and nurses. The nurse also makes physical examinations of the pupils when they return to schools after suffering from illness.

Thus the elementary school children at Berkeley receive both mental and physical education and the training of the mind as well as of the body is well-balanced. Through this training of the mind and the body the teachers attempt to make them good citizens of the State.

In the State of California the compulsory school law is extended to eighteen years of age. If a student can graduate from high schools at the age of sixteen he is exempted from further attendance in the school. Children who are not mentally fitted to proceed for the high school education are shifted into the continuation school after exploring their abilities in the junior high school. In the continuation school these children receive trade and industrial training for a period of four hours a week for one hundred and forty-four hours a year. The California State law passed in 1929 regarding the continuation school requires the unemployed children of school age to attend the continuation classes for three hours five days a week, The school attendance officer enforces the school law and students failing to attend the school are demanded satisfactory explanations. The law provides for both penalty and imprisonment of parents or guardians of children for final violation of the law.

Teachers in the State of California as in other States of the Union do not hold a permanent tenure of service. Generally they are appointed by school Board on the recommendation of the City School Superintendent. For one year the new teacher remains as a probationer and if she shows a satisfactory result then she is 'hired' for another period of time. The reader may question why the writer here used "she" instead of "he" for the teacher. The real explanation is that about ninetyfive per cent of the elementary and about ninety per cent of the secondary school teachers are recruited from the fair sex. The teachers of the elementary schools must be University graduates and must hold a teachers, diploma issued by the State of California. These teachers, though "hired and fired"* by the local school Board, may appeal to the State Board of Education for justice. The teachers though appointed and discharged by the local school Board are State officials in that they hold State teachers' diploma and the local school boards are the creations of the State to carry its educational programme. Even the private schools maintained by the Catholic orders are under the control of the local school Boards. The teachers though fresh from University do not find any difficulty in securing positions. Besides these teachers do not have to show their eminence before their appointment. Experience also counts little with the school Boards, because it has been found by experiment in U. S. A. that teachers after about eight years' service lose their teaching efficiency unless they take sabbatical leave of study to acquire fresh knowledge. The same is true of

THE RESPONSIBILITY OF WOMEN AS CITIZENS IN THE INDIA OF TODAY

By Rajkumari AMRIT KAUR

In dictionaries "citizen" is defined as a dweller in a city—especially one who enjoys certain rights and privileges. But the meaning of words often changes with the progress of time and the term "citizenship" today should convey to us all something very much more comprehensive than a mere dweller in a town enjoying its freedom and privileges.

For the conception of the word "citizen" we have to go back to Greek and Roman times where "city" involved the ancient idea of the State or City-State and did not apply to the place but to the whole body politic. Aristotle defines a "citizen" to be one to whom belongs the right of taking part both in the deliberative, or legislative, and in the judical proceedings of the community of which he is a member. A citizen, therefore, can only exist in a free State and Aristotle felt that the State, as a body of citizens, was sufficient for the purposes of life. A citizen is, in short, one who rules and is ruled in turn and one whose aim is the salvation and safety of the community, its being and well-being. At first, the rights of citizenship in Athens and other Greek communities were readily attained by those who were not born to them, but at a later period when the organization of Greek civic life had reached a high degree of perfection, admission to the roll of citizens was procured with difficulty. The public ceremony, however, of the dedication of Greek youth to the service of the State was a most inspiring one and I often wish we, in our country, had something of the same nature for the guidance and inspiration of our youth. In any case the rights of citizenship in Greek and Roman times were a coveted possession and this association of rights with citizenship has lasted down to the present day. It is interesting here to note that when self-government developed in ancient Greece and Rome, women had no share in it. Citizenship rested with men solely and it was not until the 19th century that it was realized that it is a mistake to treat sex as a factor that should militate against one half of God's creation.

Civics, or the philosophy of citizenship, is today recognized Social science. By some it has been described as a science of civilization for the three words, citizenship, civics and civilization are all derived from the Latin word for citizen which is "civis." It is also interesting to note the close connection between politics and civis. Aristotle's definition of a "citizen," which I have already quoted is mainly political and relative to a State. The Greeks developed a vigorous social and political life in their city-states —the Greek word for City being Polis. The Romans developed the same type of government in their "Civitas" or City. Therefore, just as Politics referred to affairs of the City in ancient Greece, so Civics referred to affairs of the City in ancient Italy. But, though etymologically Politics and Civics mean the same thing the former, politics, has come, in our time, to treat specially of national and international affairs; it traces the evolution of political forms and institutions and lays stress primarily on rights and the ways of securing them—while the latter, civics, lays stress primarily on *duties* and on the education and character requisite for their performance. Civilization has progressed to such an extent that no side of life, whether economic, religious, social, literary or humanitarian can now be divorced from civics. European civics has been based on Greek and Roman traditions and has evolved in different countries according to varying national temperaments, characteristics and needs. In our own country Hindu ideology also laid down that one should give up oneself for the sake of one's family, one's family for the sake of one's village, one's village for the sake of one's country and the world for the sake of one's soul. The Hindu conception of citizenship has probably been more social, humanitarian and spiritual than political in that spiritual salvation of the soul has always been given the highest preference. Generally speaking, however, the modern idea of a good citizen is not merely that of one who is a member of a State or obeys its laws, but one who has an active sense of being an integral part of the State. He is not a part of it because he lives within its boundaries or has accepted its ideas or become naturalized in it *but* he is a part of it only in so far as he helps to make it and maintain it as a great civilized and civilizing group.

Citizenship, therefore, is the right ordering of our several loyalties and the proper performance of our functions and duties in life and the correct balance and adjustment thereof.

Civics, as a social science, may then be stated to be:—(1) a study of what is really good life for oneself, one's society, one's country and the world in general and (2) the practice of the knowledge gained in the best ways of life which are consonant with one's past culture and present needs and environment. As a science it extends from local interests to national, international and human relations. It has to consider all aspects of life, individual and social, physical and moral and adjust activities in the light of past experience and future aims. It touches human interests so intimately that it calls upon its students to cultivate in themselves that understanding sympathy with the lives and general conditions of others without which no well-being or progress is possible. Aristotle laid down that man is a social animal—he is born in society and lives in society. From earliest ages he has built up for himself institutions such as family, clan, tribe, caste, community, village, town, province, country, empire, world, and has taken intense pride in the ever-growing and expanding nature of such progress. Today we are so linked with each other by scientific discoveries that it is not possible for any nation to live in isolation.

Being, therefore, members of society it is our duty to see how best we can contribute to the well-being of that society. The aim of society is the good life of the individual and certain rights which give free scope to the individual for progress are fundamental to our idea of a good society. The basic conception of such must, therefore, be one which sets out clearly as its end the realization of the good life for all its members through the maintenance of this fundamental rights. It is in the daily exercise of these rights and duties and in the opportunities which the State affords to the individual of developing his or her faculties that constructive citizenship is built up.

India today is standing on the threshold of a new life which is pulsating within her veins. We are struggling to find ourselves and evolve for ourselves what we consider to be our rightful place in the sun. In this transition period, as is only natural, there is in our country a conflict of opinion, an internal turmoil, which may, at times, obscure the goal we all have in view. The womanhood of India has awakened from an age-long slumber and the responsibility of seeing and feeling aright our duties at this critical period of our history is very great. The women's organizations of the country are today pressing for the recognition in the New Constitution of our inherent right to citizenship—citizenship which will give us the same political rights as are enjoyed by men. But I hope and believe that our conception of citizenship will teach us to reckon our citizenship as something very much higher and bigger than mere political freedom or privileges. Civic rights will mean nothing to us unless we realize to the full the *duties* that these rights imply. Rights and duties are surely interdependent—for what is a right in regard to oneself is a duty in regard to others. Mazzini said to the workmen of Italy—"Every right you have can only spring from a duty fulfilled." I would ask every Indian woman to remember his dictum.

The crying need of our country today is social and educational reform and the burden of social service lies heavily, at the moment, on the shoulders of a few selfless workers. If India is to progress along right lines it is incumbent on us women to seek to play our rightful part in the building up of a structure of society which shall have solid foundations.

1. In a land, such as ours, of universal marriage, motherhood as well as household work is in itself a vocation. The proper ethical training of children is the sacred task entrusted to women. To instil into their young hearts love of country, love of humanity, hatred of wrong, to train them to follow the paths of virtue and to live and sacrifice for truth is to make them worthy citizens of the India of tomorrow.

2. It is the bounden duty of women to see to it that our daughters as well as our sons are given opportunities for education and we must continue to press that such education shall be of the right type.

3. I feel very strongly that it *is* possible for a wife and mother to command sufficient leisure for an active interest in the wider life around her and contribute to the well-being and advancement of those less fortunate than herself in every way. There is room for endless voluntary workers in our schools, our hospitals, among our own servants, in our maternity and child-welfare centres, in our large industrial centres amongst our women labourers, amongst our fallen sisters—and, above all, in our villages where the large majority of our population lives and where ignorance breeds disease and increases poverty. I am sure that we who have had the privileges of education and live for the greater part in towns have been negligent of the needs of our sisters in the villages. Believe me when

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I say that there *is* an awakening amongst women in the villages; they are anxious to have schools for their daughters, they welcome with open arms those of us who can even ocasionally find time to go and talk to them and take an interest in their conditions of living. We owe an enormous duty to them and we should consider it a privilege to stretch out the right hand of fellowship and help to them.

4. We who are convinced of the terrible results of early marriage should band ourselves into groups pledged to banish this evil from our midst not only by non-co-operating with all such of our own class of society who still persist in following this custom, not only by doing our best to bring to book those who violate the Sarda Act, but also by doing endless propaganda among those who are victims of an age-long habit from sheer force of tradition and ignorance.

5. It should be our aim to create a healthy public opinion against such harmful customs as "pardah," polygamy, the dowry system, immoral traffic in women and children and others that still exist in our country. Social legislation, however necessary, can never wholly eradicate evils—but as soon as society realizes that an evil exists its day is, *ipso facto*, over.

6. We must believe in and value the dignity of human labour so that the sin of untouchability may be cast out from our midst.

7. One of the greatest contributions we women can make to India today is the creation within us and around us of that spirit of unity without which our true welfare is wholly impossible. If we ourselves realize that we are members one of another and that the gain or loss of one is equally the gain or loss of the other and if we inculcate this ideal in the minds of our children we shall indeed be laying the corner-stone of a national structure which shall endure. The value of co-operation cannot, in my opinion, be too highly estimated.

I have touched very briefly on the practical side of such work as I believe lies within the power of all of us to do. In particular I should like to appeal to the younger generation to come forward in their hundreds for the field of work is immense and the labourers few. It is not so much in the actual attainment of the goal as in the earnest endeavour to accomplish what we believe to be a noble purpose that the measure of success lies. It was so with Browning's Grammarian. Men laughed at him while he lived, but what did that matter? In the end they paid their homage to him and when he died they laid him to rest in the highest place they knew.

Aristotle's dictum that "The State comes into existence to make life possible, it continues to exist to make life good" is true for all time.

Lastly, therefore, and above all else the women of India must see to it that our State is a great moral agency. We must, at all costs, stand by principles for principles alone are constructive and ideals are never translated into facts without faith. Great things are never achieved except by "the rejection of individualism and a constant sacrifice of self to the common progress." Women as the embodiment of devotion and self-sacrifice have got to realize that the things most worth having cannot be had without much toil —and self-denial is a lesson that began to be inculcated while man was still a savage and has never ceased to be reiterated generation after generation. If, therefore, we want to become citizens in the fullest sense of the term we have got to give the highest place to the moral and spiritual values of life without which all material gain or political freedom is mere dross. "Religious thought is the breath of life of Humanity; at once its life and soul, its spirit and its outward sign." *But* it must not be the religion of dogma and ritual which breed superstition and intolerance; it must be the religion of love which "creates for us that theory of duty which is the mother of self-sacrifice which ever was and ever will be the inspirer of great and noble things." If this spirit of love dominates our lives, of it will be born the spirit of service—service in the sense of sharing our gifts with others—and that faith which can move mountains. It is through the religion of love that I would fain hope and believe that India's women will rise to their full stature and become worthy citizens not only of our own loved country but of the world. For it is the gospel of the brotherhood of all men that must inspire and guide us so that, rising above the man-made barriers of caste, creed, community and race, we may make our humble but lasting contribution towards the ushering in of a new era of peace and happiness into a stricken and a suffering world.

May each one of us strive to be as Browning so admirably put it:

"One who never turned his back but marched breast forward,
Never doubted clouds would break,
Never dreamed, though right were worsted, wrong would triumph,
Held we fall to rise, are baffled to fight better,
Sleep to wake."

SOVIET'S RELATIONS WITH THE LEAGUE OF NATIONS.

By BIMAL BEHARI BASU

REUTER has flashed across the wires the news of Soviet Russia's entry into the League. For months past rumours have been afloat and a flutter in the political dovecotes was visible. But all rumours have at last been set at rest and Russia's entry into the League has become a *fait accompli*. It is one of the most unexpected and paradoxical events of recent times. The post-War world is no doubt rich in paradoxes, but this beats them all. The only proletarian State in the world has thought fit to enter a League which she not long ago characterized as "wasp nest of international intrigue," "League of Capitalists against Nations," "an alliance of world-bandits against proletarians" and what not! It is also surprising to find France engaged in flirting with her former ally and later enemy. Not long ago, one of the most influential of French papers characterized the Soviet as "the most abominable regime of oppression and spoliation that the world has ever known." Yet France was the prime mover in getting the support of the major powers like Great Britain in inviting Russia to enter the League, though the smaller powers stoutly opposed the move. Russia was only too glad to enter the august portals of the League.

In order to understand the sequence of events, we have to trace the gradual change in the attitude of the Soviet towards the League and *vice versa*.

Russia has chosen to enter the League at a time when its prestige is at the lowest ebb. Its opinion is openly flouted with impunity and its function has degenerated into passing pious resolutions which nobody cares to execute. It serves as the most important platform for affording an opportunity to the Foreign Ministers of displaying their eloquence. But there are other causes at work which account for the changed attitude of the Soviet. The accession of Hitler to power has given rise to a new situation in international politics. Germany under Hitler has bidden good-bye to the defeatist policy so successfully and assiduously followed by the late Herr Stresseman and Chancellor Bruening. One of the most important planks in the programme of the Nazis is to scrap the Treaty of Versailles, if necessary by resorting to violence. Von Papen, the present Vice-Chancellor of the Reich, declaims: "Germany has struck the word 'pacificism' out of the vocabulary"; and Baron von Neurath, the Foreign Minister in the Hitler Cabinet, thunders: "Germany will re-arm, never mind what the result of the Disarmament Conference is." Finally, her withdrawal from the League caused profound uneasiness in France who, therefore, wants to strengthen herself. She sounded Russia, who readily fell in with her suggestion. Russia, too, is mightily perturbed at the anti-Soviet policy of the Nazis and the political designs of Hitler. Hitler, she says, is secretly trying to come to an understanding with Poland whom he promised to help in wresting the Soviet province of Ukraine in return for the Polish Corridor. Further, he had not made any secret of his desires to expand on the West and proclaim the divine mission of Nordic domination over the Slavs.

Threatened on the European front, Russia was still more alarmed at the militaristic policy of Japan, who was directing her covetous eyes towards the rich resources of Siberia. But here the question arises, why should Russia look upon the League as a guarantor of her safety? Was not the lesson of the Sino-Japanese war a sufficient warning to her? This is all the more puzzling when we consider the contempt in which the League was held by the Soviet. In 1924, her Foreign Minister, Chicherin, refused to join the League on the ground that that would be helping the capitalist States in their aggressive designs. Yet ten years later, his successor, Litvinov, eagerly seeks an opportunity of joining the League.

It has to be remembered, however, that the Soviet has never objected to the aims of the League, *viz.*, the maintenance of peace. She has consistently pursued this aim and her foreign policy is conspicuous in this respect. The objections of the Bolshevists against war is fundamental. Since it is the masses who suffer most in any international war, the Soviet, as an expression of proletarian dictatorship, can ill-afford to engage in wars. That would be, according to it, distinctly criminal and foolish.

The Soviet peace policy has found expression in the advocacy of total disarmament and,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ally, the building up of a network of non-...ression pacts with foreign powers. She has ...ctically directed all her attention towards ...ring this purpose. The declaration of her ...e intentions has drawn sardonic smiles from ...e capitalist Powers, who describe them as "an ...ction of good-will advertizement." But a ...ent of international politics cannot fail to ...e that the Soviet is sincere in championing ...e cause of peace, if not for any other reason, ...r her own interest. We can trace her efforts ...is direction from 1922 when at the Genoa ...ference she laid stress on disarmament as a ...ude to re-construction. Again, before the ...paratory Commission of the Disarmament ...ference in 1927, she courageously pleaded ...e total abolition of the army, navy, air force, ...departments, war education and war budget. ...Powers assembled at the Conference scorn-...rejected the scheme as utopian. Undaunted ...this, she submitted a second draft treaty ...ating their partial abolition, but this also ...with the same fate. Having been foiled in ...attempts, she declared her intention of co-...ating with other Powers in any arrangement, ...ever incomplete, that represented even a slight ...ce towards disarmament. Moreover, in all ...subsequent Disarmament Conferences she was ...picuous in not insisting on any reservation ...d on her own requirements. Unfortunately, ...example did not commend itself to other ...ers.

Realizing that disarmament was impossible ...e present state of affairs when Mars seemed ...e in the ascendant, the Soviet persistently ...ht other means of practical safeguards and ...ously built up a network of non-aggression ...s with other nations, which by this time ...ber 14, including those on her borders. ...e it is that we find the amazing spectacle ...capitalist France and Fascist Italy entering ...an alliance with the only Proletarian State ...e world. Great Britain, Japan and China ...d outside this chain of pacts. The efforts to ...e to an understanding with Japan proved ...tive.

The Soviet system of alliances stands in ...ct contrast to the policy of the League which ...s to prevent wars by means of arbitration, ...sion and collective responsibility of members. ...Soviet, on the other hand, makes no secret ...e fact that her alliances are guided by ...ical necessity and are, therefore, of a ...porary nature, and are not based on collective ...nsibility, or on the contrary principles of ...ality and non-aggression.

According to Soviet definition, aggression means all economic boycotts, intervention and hostile acts short of war; neutrality means neutrality in the case of unprovoked attacks.

By this network of treaties, the Soviet has established a regional system and her contribution is great towards the maintenance of peace. It may be stated that by this means she has established virtually an Eastern Locarno.

Though so far as the maintenance of peace is concerned, the Soviet has been at one with the League, she had so long kept aloof from it as she considered it to be an impotent machinery for achieving the ideal. Moreover, she could not easily forget the memory of the active help rendered to the counter-revolutionaries within her borders by the members of the League. The anti-Soviet tendencies of the League only served to kindle the bitter memories afresh and her relations with it "varied from correctness to hostilities." When Germany entered the League as a result of the Locarno Pact, the Soviet had strained every nerve to the utmost to dissuade Germany from doing so.

The Soviet's participation in the League's humanitarian and scientific fields of activities has been little, although during the first few years of the post-War period she actively co-operated with the League in coping with an outbreak of epidemics within her borders. Her adherence to the League's treaties regarding non-controversial matters amounts so far to six only.

Apart from Disarmament Conferences, she took part in the World Economic Conferences of 1927 and 1933. In 1927, the first signs were visible of the Soviet's changed attitude towards the capitalist Powers. In the Conference of 1927 her representatives repudiated any intention of coming into conflict with them and advocated a proper understanding of, and an intimate contact with, the Soviet. She stressed the fact that a practical understanding between the Soviet and other Powers was possible, feasible and desirable. The Soviet delegates also took advantage of the international conferences to advertize the stability of her economic system and to point out the immense potentialities of her markets. They also protested against the prohibition of the import of Russian goods into other countries. From 1931 onwards the Soviet succeeded in concluding a number of economic non-aggression pacts. This economic co-operation with capitalist Powers undoubtedly paved the way to political co-operation.

So far the Soviet's participation in major works in the settlement of international disputes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was unthinkable. In 1920, Persia had applied to the League against the Soviet aggression, but it was peacefully settled through direct negotiation. In 1923, Georgia, then an independent Republic, sought the League's protection against absorption by the Soviet, but beyond passing a sympathetic resolution, the League could do nothing. In 1922-23, Finland appealed to the League on behalf of the Finnish residents of the Soviet province of Carelia. The League referred the matter to the Hague Court, which after some deliberation refused to move in the matter, as Russia did not recognize its jurisdiction. It was for this reason that China did not refer her dispute with Russia in 1929 to the League and Chiang-kai-Shiek had to remain satisfied only with making bitter complaints against the Red Imperialism.

In the Sino-Japanese war of 1931 the interests of Russia as well as of the League were vitally affected. But even then, the Soviet could not persuade herself to co-operate with the League; she refused her co-operation to the Lytton Commission. The report of the Commission was followed by the creation of a committee of 29 which invited both the U. S. A. and Russia to sit on the Committee. The U. S. A. accepted the invitation, but Russia declined on the ground that she could not be expected to deliberate with the committee, for more than half the members were not in diplomatic relations with her.

But an indication of the change was visible in February 1933, when Litvinov, on behalf of the Soviet, accepted Chapter I of the French plan of November, 1932 which provided for consultation among the signatories of the Kellogg Pact in the event of any threatened or actual aggression, the launching of a drastic economic sanction against the aggressor and the enforcement of the Stimson doctrine of non-recognition. The Security Committee of the Disarmament Conference accepted with some modifications the Soviet definition of 'Aggressor' on the 24th May, 1933. According to it, an aggressor is any State that invades or otherwise attacks another State with or without any declaration of war. Moreover, acts otherwise aggressive should not be justified by any consideration of political, economic or strategic necessity.

In a speech delivered before the All-Union Executive Committee on 29th December, 1933, Litvinov spoke of the Soviet attitude towards non-aggression pacts in these words: "There should be no question of military alliance on old lines, but co-operation for the rightful self-defence of all those who are not interested in violating peace, so that no one could think of infringing it. The U. S. S. R. is ready to participate in carrying out this task." Stalin is reported to have said in an interview with an American journalist, "If the League is only the tiniest of bump—somewhat to slow down the drive towards and help peace—it is not excluded that we should support the League despite its colossal deficiences." The Soviet Ambassador, Troyanovsky, spoke before the American Society of International Law on the 28th April, 1934, on the wisdom of international organization for peace. These all pointed to the same direction, *viz.*, the Soviet's desire to co-operate with the League as an international organization of nations.

During the past few months negotiations were being conducted behind the scenes and frequent consultations between the French and the Soviet Foreign Ministers gave rise to widespread speculation that something was being staged behind the political curtain. On May 18, 1934, the French Foreign Minister Barthou discussed with Litvinov the question of the Soviet's entry into the League in Geneva. On May 20, 1934, articles appeared in the leading Soviet newspapers welcoming the French suggestion. They, however, opined that it was not the Soviet which had changed its policy, but the League which had given up its Anti-Soviet bias.

This, in short, is the history of the Soviet's connections with the League and shows how its attitude underwent a gradual change under the stress of world conditions.

As a great Power, the Soviet will be given a permanent seat on the League Council, though this will cause dissatisfaction to Poland, which failed to obtain a permanent seat in spite of strenuous efforts. This may have a repercussion on the Franco-Polish *entente cordiale.*

The entry of the Soviet into the League is a great political event. This indicates a new orientation in the Soviet international policy and may be put on a par with her far-reaching new domestic economic policy. The Soviet has no intention to expand her frontiers and she has ceased to espouse the cause of International Communism and World Revolution. The Third International has ceased to be militant. As realists the Soviet wants to be let alone in her efforts to build up the new social and economic order within her own borders on a permanent footing. Though she believes in the ultimate inevitable establishment of world socialism, the new Stalinist doctrine recognizes the peaceful co-existence of Marxism and Capitalism.

The question naturally arises, how long will this co-operation continue? It depends on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...ode of the capitalist nations. Undoubtedly, ... Soviet will defend the Red Flag to the last ... if she is threatened with a capitalist attack. ... so long as the necessity does not arise and ... long as capitalism remains strongly entrenched, ... will prefer to co-operate with others instead ... remaining in splendid isolation.

The Soviet's entry means a tremendous ...ition to the League's prestige and power. ...t it lost by the withdrawal of Germany and ...an, it has regained by the joining of the ...iet. Of the two great world Powers which had so far kept aloof, one has joined the League at the present critical juncture of international politics; it remains to be seen how long America persists in standing out.

Those who see in this departure in the Soviet foreign policy an indication of her gradual inclination towards Capitalism, are sadly mistaken. So far as fundamentals are concerned, the Soviet is, and will for ever be, a Socialist State. This is evident from her drive towards collective agriculture and farming and the progressive decline in the number of small shop-keepers.

A PLEA FOR A COMMISSION ON THE LEGAL DISABILITIES OF WOMEN

By RENUKA RAY, B.SC. (Econ., London)

THE legal position of Indian Women is undoubtedly one of the most inequitable in the world today. It has entailed so ...h suffering and misery to the women in ...ia that, were it not for the extraordinary ...bility of the social conscience, it could never ...e been tolerated for so long. Changed ideas ...arding the position and status of women in ...ope came into England and the West only ...t a hundred years ago. At one time, not ...long ago, the status of English women in ...was extremely low, and far more unjust as ...pared to that of women under Muhammadan ..., and the Hindu Codes of Ancient India. ...t today they have already attained a position ...equality in law in regard to property and ...cial rights. In India, too, a changed outlook, ...regards the rights of women, has been ...ermible for some time among a small ...ority of the progressive and liberal-minded, ...o have striven to bring about the regeneration ...women; but the larger majority of Indian ...men have so long been entirely untouched ...this newer spirit of progress. During the ...fifteen years, a fundamental and momentous ...ge is making itself manifest. True, women ...y have not attained a tithe of their just ...they still suffer under innumerable ...abilities in law, countless numbers are often ...ded to a miserable existence due to the ...ing social customs, but their 'Pathetic ...tentment' is broken at last, they are alive ...pulsating, and every year brings an ...easing and more insistent demand from ...that their just rights and duties be ...ded to them once more. Much still remains to be done, but it is significant that so many of those who in the past used to suffer in silence are no longer inarticulate. Many of us find it difficult to realize to what extent the laws of the land have been accountable for the unjust and oppressive treatment meted out to large numbers of women.

This position has clearly arisen because both Hindu and Muhammadan law are based on religious enactments, and it is upheld that these are immutable and cannot be changed. The policy of non-intervention which the Government of India have pursued in religious matters, have led them to leave the greater part of the Legal Codes entirely unaltered, and so they are perpetuating and upholding a system of laws which can have no place in a progressive and ordered modern State. Law can no longer remain static in a dynamic society. It is the duty of the State to adjust and suit the laws of a country to the requirements of the times. In spite of all sacraments and religious injunctions, the history of Hindu law will show that it has continually changed with the changing times, right down to the advent of the British period. When law and order prevailed in Vedic India, both the legal Code and social customs accorded a large measure of equality to women. It was during a period of strife and conflict, when ordered conditions of society could not prevail, and physical valour was the primary need of the day, that woman gradually lost her status in society. When times of peace came again, the demoralization of women was almost complete. As seen during the period of the Smritis, there was a continuous and long struggle between the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

different law-givers as to the position of women and many contradictory enactments came into usage, according to the social ideas of the day. When the laws were applied during the British period, grave injustice was done to women, as the Pandits and Priests who were asked to expound the laws, gave the most reactionary interpretations in respect of women's rights, so that the little that law still allowed them was further curtailed.

In order to understand and appreciate the present position it is necessary to give a few broad general characteristics of the disabilities women suffer in law, in our country. There is a great diversity in law in India and it is necessary to deal with the different Codes separately. A minority of the people are governed by more liberal and progressive laws, such as the Parsis, Christians and all those who come under the Special Marriage Act and the Indian Succession Act. Women governed by these laws do not suffer any particular disabilities as regards their marital and their property rights. Those who are married under Act III of 1872 are governed by saner laws of marriage but it is one of the anomalies of the legal system that in regard to inheritance, they are guided by customary laws, which means that the inequitable laws of property of the older Code are enforced. For the vast majority of Indian women who come under either Hindu or Muhammadan law, the position is quite different.

Hindu Law is not uniform all over India and differs, according to the diversity of interpretations given, to the Vedic and Smrity texts in later times by successive commentators. This has given rise to the different schools of law. The Dayabhag and Mitakshara are the two main systems of law. Broadly, the former is prevalent in Bengal, and the latter in the rest of India, with the exception of Bombay, where the Mayukh school of law holds sway. The Mitakshara law again is not uniform and has sub-divisions, probably to suit the customs and requirements of the different parts of the country. So far as the rights of property are concerned, it is true of all the schools of law that a woman has no absolute rights of property, except under certain circumstances. In other words, she cannot dispose of, or sell property at her will. It is only in certain specific cases of "Stridhan" ("woman's property") known as "Saudayik" that this right accrues to her. She cannot even dispose of "Stridhan" which comes to her after marriage, without her husband's consent, even if it be her self-acquired earnings. It should be noted here that, apart from the fact that a wife cannot be ejected from the dwelling house, and that the obligation to maintain her remains binding on the husband, the latter can do as he desires with his property without consulting her. As the money is earned and contributed by him, the justice of this principle is not disputed in any legal code. Is it not only fair that a wife too should have complete right of disposal of the income she has earned by her own endeavours? Absolute right over property is only recognized by the Mayukh school in Bombay, so far as a daughter's right is concerned. Here the daughter is entitled to an absolute share in her father's property. The Mayukh law differs from the Mitakshara Code only in regard to the daughter's rights of inheritance in her father's property. Under Dayabhag law in Bengal, a daughter has no right over her father's property. If she is an unmarried daughter, she is only entitled to bare maintenance and marriage expenses. The married daughter has no right of inheritance at all so long as sons, grandsons, widows. unmarried daughters and daughters' sons are alive, who inherit in the above order. Under Mitakshara law the position of the daughter is even worse as due to the system of survivorship, if no immediate male heirs are alive, the property reverts to the coparceners. It is often held that once a Hindu woman is married, she belongs entirely to her husband's family where rights and duties are accorded to her, and so it would be unfair to the sons if women should also inherit property as daughters from their father's estate. If we probe deeper into the matter we will find that a woman's rights in her husband's family are very precarious. It is true that under Dayabhag law a woman who has no sons is given a limited interest in her husband's property; but she cannot dispose of, or sell or gift away this property, except under certain cases known as legal necessities. Often her heirs or 'reversioners,' as they are legally called, harass her and question her actions to such an extent when legal necessities arise, that even under these circumstances, she finds it difficult to sell her property except at a great loss. "Widow's Estate", as this property is commonly called, gives rise to so many law suits that few people are willing to take the risk of buying such property unless they are amply compensated. Whenever bills are brought forward to improve the position of women in regard to inheritance, a protest is invariably launched by certain reactionaries in Bengal, that under Dayabhag law, women's rights of inheritance are equitable and require no redress, unlike the law in other parts of India. The case of the widow with sons, who is given a limited interest in her husband's property, is cited to uphold this argument. Yet they forget to mention that a widow with sons is only entitled to bare maintenance. If there is a partition of the property then a widow is entitled to a share, but this is entirely at the will of her sons as she cannot sue for a partition. If her sons misuse her husband's hard-earned money, which occurs oftener than we imagine, she has no legal redress as long as she is given bare maintenance. As long as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

father is alive, a "son's childless widow" is not even entitled to bare maintenance and her fate is most pitiable. Neither in her husband's family nor in her own has she any right. Married in childhood, and entirely helpless and unable to fend for themselves, these poor women are frequently left without any means of subsistence when they become widows. Few of us realize how many of these unfortunate women are ultimately compelled to lead a life of shame. Under Mitakshara law, a widow and a son's childless widow are both entitled to bare maintenance. The widow does not even inherit 'Life estate' in her husband's property even if she has no sons, for as shown in the case of the daughters, if there are no male heirs the property reverts to coparceners.

In the normal happy home, legal distinctions do not matter, and it would be a gross exaggeration to say that the majority of women in India are not happy or treated well because their legal status is so low, but as in the case of the widow in regard to property, so in the case of the married woman, if she does need redress, the law of the land is against her. A Hindu woman has no choice in marriage. In a way it may be said that she merely changes the guardianship of the father for that of the husband when she marries and as things stand no matter what he is, he has almost absolute right over her. She has no redress, whether he be suffering from the worst diseases, or be guilty of adultery, cruelty or desertion—and as such is the irony of fate, that she has no redress even if he marries again in her lifetime, because that is not only allowed by law, but considered only right and just if she be childless. So for all practical purposes, a man has the right of dissolution of marriage and his wife can only claim bare maintenance of him. Divorce is strictly banned by Hindu law and society, as marriage is a sacrament, but no sacrament holds, when a man takes unto himself a second wife, and this is considered entirely equitable if the first wife is given maintenance and a right to live in the dwelling house. Even judicial separation is not allowed in Hindu Law, except if cruelty can be proved to amount to a personal danger to life. According to recent rulings of the Courts, marriages to lunatics are considered invalid, but under no other circumstances can a Hindu woman be freed from an unhappy marriage. Aborigines and those Hindus who do not come under Brahminical law, have rights of divorce. Women who are the home-builders, the mothers of the race, surely cannot want to break up the home and family life, and yet there must be some reason why thinking men and women consider that the rights of divorce should be allowed. We do not want divorce to be introduced for any flippant reason but for only those reasons brought under the light of modern conditions, which even the old Hindu system considered right and just, as expounded in the Smritis of Narad and Vasista.

The guardianship of children is another matter which is of special importance to the women as the mother. Not only the wishes of the father but even of other male relatives, such as the maternal uncle, take precedence over those of the mother in regard to her children, under certain circumstances. We hear so much of the glories of motherhood, and yet the mother, whose natural and moral right cannot be denied, is by a system of retrograde laws deprived of her greatest right, because she does not earn her living and agrees to give her life to rearing the family instead. Can anything justify such a system ?

As regards the adoption of children, a Privy Council Ruling allowed certain rights to accrue to woman,—but only recently there was a Bill in the Bombay Legislature to preclude her from this right.

When we turn to Islamic Law we find that the rights of property are far more equitable to woman. Although a daughter is not given an equal share with the sons, she is given a definite share of her father's and also of her husband's property. But a grave injustice is done to the women of many Muhammadan communities in parts of Bombay, Gujarat and Kathiawar, as these communities are not governed by Islamic Law but by customary law. Consequently the rights of Muhammadan women of these communities are guided by the unfair Hindu laws of property. As regards marital rights, the Muhammadan woman is often in a far worse plight than her Hindu sister due more to the backwardness of her community as a whole than to her position in strict law. Plurality of wives is not only allowed by law, but even today it is frequently found that a man has more than one lawfully wedded wife. Recently due to the advance of modern ideas and the exigencies of economic necessity, there is a great decrease in this practice and number of such cases. Amongst Hindus, although law allows a man to marry again if his wife is childless yet cases of this nature, if not non-existent, are extremely rare. The principle of divorce is recognized in Muhammadan law, but it is only at the will of the husband that a woman can obtain a divorce. A man is entitled to obtain a divorce at his mere will to do so, and so a woman not only does not receive redress when she is in need, but also may find her home broken up, at the mere caprice of the man, as her consent to the divorce is unnecessary. It must, however, be admitted that the law of dower mitigates to a certain extent the harshness of the provisions relating to divorce. Sometimes she can purchase her divorce by giving up her property, and this is called "Khula", but even here the husband's consent is necessary. The usual mode is 'Mubarat', where the woman receives back her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

full share of the property when divorce takes place. So we find that alterations in Muhammadan law are also necessary.

In Hindu law a wholesale revision is absolutely necessary as regards inheritance and marriage, if we are to remove the disabilities under which women suffer. We have had great champions and liberators from time to time, from Rammohun Roy downwards, who have espoused women's cause and sought to redress her grievances. But it is clear that individual efforts alone will not suffice to ameliorate the legal position of women. Even today with the championship of Rai Harabilas Sarda Bahadur, and Sir Hari Singh Gour and other liberal-minded men, efforts are being made again and again to improve the legal status of women, but in spite of all their gallant help it cannot be denied that redress is slow to come. Mr. Harabilas Sarda's efforts to remove the legal difficulty with regard to women's rights of property and inheritance, are a clear indication of the slow procedure. His first Bill which aimed at a real removal of grievances was thrown out completely by the Assembly, and even his Widow Maintenance Bill, which was very much a half-measure, has not been taken up by the Assembly this year. The Council of State is now considering a Bill on women's inheritance, but there is little chance of its becoming law. A complete change and wholesale revision is necessary. Palliatives and half-measures cannot do any longer. Apart from these, anomalies will always creep in when laws are amended by a patchwork method. As in the case of Sarda's Child Marriage Restraint Act, amendments will become necessary to enforce the provisions of the acts passed. For all these reasons, the representatives of India's women, at the last Session of the All-India Women's Conference, considered that an Enquiry Commission should be set up to suggest reforms under the light of modern conditions and ideals, and that the recommendations of this Commission should be set forth in a Bill before the Assembly and passed into law. They feel that if the Government of India realizes that they are earnest about their demands and that it is the express desire of thinking men and women from all over the country, we shall be able to obtain the establishment of this Commission of Enquiry. It should have a large non-official element, including prominent lawyers and liberal-minded men. Women should also be adequately represented by their chosen representatives. The work of the Commission will help to create a widespread public interest and opinion in the matter, and to lay bare to the country at large the great evils that are rampant as a result of the present legal codes. The materials collected by the Commission will help them considerably to suggest a simplified system, which will recognize a code of laws, where women will be given equal rights with men, and which will yet be in conformity with true Indian culture and traditions. The enlightened States of Baroda, Mysore and Travancore have already reformed their laws regarding the disabilities of women on the recommendations of Commissions of enquiry set up by them, and the result has been very satisfactory. It is surely not too much to expect that women in British India will be afforded a similar concession.

The Hindu Widow Remarriage Act gives the widow a legal right to marry again, but few widows use this privilege that law allows them, and so, it is sometimes argued that a removal of the disabilities in law will not alter the status of women, to a considerable degree, as custom is rigid, and until the prejudices are removed from society, the law will be a dead letter. It is true that social prejudices hamper the work of reform considerably, and law cannot alter these, if changed ideas do not come in simultaneously. The propaganda and work the Commission will do while it is holding its session, will have a tremendous effect on the popular mind. Apart from this, social conventions are already changing rapidly and women have shown that when their help is needed in the social or political sphere, they have proved themselves more than equal to the task. Not only is it unfair that the legal system should hinder them from attaining their emancipation, but until an atmosphere of comradeship between men and women pervades society and the social environment is unfettered by legal restrictions and blind prejudices, it will not be possible for India to work up for herself a position of dignity and equality in the comity of nations.

[NOTE. Rammohun Roy has shown in his pamphlet on "Brief Remarks regarding Modern Encroachments on the Ancient Rights of Females,..." that according to the ancient legislators, such as Jajnavalkya, Katyayana and Manu, the daughters are entitled to one-fourth part of the portion which a son can inherit. In this connection reference should also be made to another paper of Rammohun on "The Rights of Hindoos over Ancestral Property, according to the Law of Bengal." Ed., *M. R.*]

AN ASPECT OF MAHATMA GANDHI'S GREATNESS

By Pandit VIDHUSEKHAR SHASTRI

RECENTLY an attempt was made on the life of Mahatma Gandhi by means of throwing a bomb; but he had a providential escape. Indeed the unfortunate man who threw the bomb knew not what he did. But what did the Mahatma himself think of it? What did he say about it? Only what could reasonably be expected of a real devotee, and a true Vaisnava, as he himself is. And so he is reported to have said:

> I have nothing but deep pity for the unknown thrower of the bomb. If I had my way and if the bomb thrower was known, I should certainly ask for his discharge, even as I did in South Africa in the case of those who successfully assaulted me.

Naturally it reminds one of what Jesus Christ said once under similar circumstances:

> Father forgive them; for they know not what they do. Luke xxiii, 34.

Readers of the Bible know the details of this attitude in the life of Jesus Christ, which has a striking resemblance to that of a true Vaisnava. About the end of the year 1500 A.D., in the time of Chaitanyadeva in Bengal, there was a great devotee Haridasa by name. By birth he was a Muhammadan,* but became a follower of Chaitanyadeva. Being a Muhammadan he was regarded by the Hindus as untouchable. Yet, he was very saintly, and the following passage taken from an authoritative work† on Vaisnavism will clearly show what regard Chaitanyadeva himself had for him.

> Once Chaitanyadeva having seen his other disciples came to meet Haridasa who had paid his respects to him prostrating himself before him. Chaitanyadeva made him rise from the ground and embraced him. And both of them were so glad and so much moved to meet each other after a long separation that tears flowed from their eyes, remembering each other's kindness. Haridasa then said:
>
> "Don't touch me, Lord, for I am very inferior, low, and untouchable."
>
> But replied Chaitanyadeva: "I touch you to become pure. The pure *dharma* that is in you is not to be found in me; for every moment you take bath in sacred streams, every moment you perform sacrifices and practise austerities, and scriptures you read always.* You are the most purifying one, greater than a Brahmin, greater than one who has renounced the world."
>
> The Muhammadans got very angry with Haridāsa, because in spite of his being a Muhammadan he became a Vaisnava. The Muslim ruler of Bengal at that time remonstrated with him again and again to give up the religion which he had adopted, and threatened him with severe punishment if he did not obey his orders. But Haridāsa could not do so. He said:
>
> "If even my body is cut to pieces and my life goes out, I will not give up the name of Hari".†
>
> Judgment was delivered in the court that he was to be beaten in each of the bazaars of the town, so that he might die of its effect. The orders were carried out immediately and there was none who was not moved at the sight or did not try his best somehow to save him from that punishment. But what was Haridasa himself doing all the time? He was remembering his Krisna feeling the happiness arising from muttering his name. He did not feel the physical pain, but was very sorry in his heart only for those who were beating him mercilessly, and made devout supplication to his Krishna saying, "Be kind,

---

* Some say that originally he was a Hindu but was brought up in a Muhammadan family.

† *Caitanyacaritāmṛta, Madhyalīla*

* This is, in fact, from the *Bhāgavata Purāṇa*, iii. 33,7.

† खण्ड खण्ड हय देह यदि यय प्राण।
तभो आमि वदने ना छाड़ि हरि नाम॥

Caitanya bhāgavata, Adikanda xi

O Krishna, to these creatures! may they not be considered guilty owing to the harm that they have done to me'*

* ए सब जीवेर कृष्ण करह प्रसाद।
मर द्रोहे नहु ए सभार अपराध॥

These words are, in fact, almost identical with those of Jesus Christ and Mahatma Gandhi only in different languages or phrases. The *Bhāgavata Purāna*, which is the most authoritative work on Vaisnavism is full of this kind of mental attitude on the part of a true devotee.

A REVIEW OF REVIEWS

By C. L. R. SASTRI

"But, when all is said, the taste, which is an essential quality of a critic, is something with which he is born. It is something which is not born of reading Sophocles and Plato, and does not perish of reading Miss Marie Corelli. This taste must illuminate all the reviewer's portraits. Without it he had far better be a coach-builder than a reviewer of books."—Mr. Robert Lynd in *The Art of Letters* (T. Fisher Unwin : 1920).

I

IT has been declared, by one who ought to know, that it is not everybody that says, "Lord! Lord!" who can enter the Kingdom of Heaven: a truism that has, I venture to think, the merit of being meticulously true. Mere shouting at the top of one's voice does not, it is clear, unlock the gates of anything: if it did, matters would become wonderfully (and, sometimes, even woefully) simple. Everybody has heard of the sorry plight of the lady who protested too much: why, the poor dame was not believed at all. Similar is the case with your spiritual gentleman, falsely so called: the more he mentions the name of God, the more he takes God's name in vain.

II

A reviewer, in my opinion, is in a like predicament. Every review of a book, or a series of books, does not necessarily deserve that cognomen. On the contrary, it may, very often, be even a complete travesty of it. Not one in a dozen reviewers, I dare to say, can, if put to the test, fully sustain his claim to that title. He occupies that position—if the truth is to be told merely on sufferance. The fact is that there is a rooted misconception in the public mind about this matter of book-reviewing. Unhappily, it is regarded as the simplest possible affair: one, for instance, as easy as falling off a cliff, or sliding down an inclined plane. It would be well if someone took courage in both hands and came forward to dispel that illusion lock, stock, and barrel: it has, Heaven knows, wrought enough mischief even as it is. Book-reviewing, I should like to lay down with all the emphasis at my command, is no more capable of achievement by all and sundry than, say, astronomy, or mountaineering, or nunismatics is. There is, one ought to bear in mind, such a factor as "aptitude" even for this seemingly colourless stuff: the plain truth being that some can review books well, and that some cannot: just as some can play lawn-tennis or Rugby-football, or contract-Bridge, better than others. It is all, I suggest, a question, in the last analysis, of where your interest, your mental-alertness lies: the wind, as always, blowing where it listeth.

III

There is, of course, another aspect of the problem. After all, the reviewers—or the most of them—may not really be so blameworthy as they seem. In many instances, it is fairly apparent, they are compelled to do that for which they have neither the will nor the inclination. The unpleasant job is, more often than not, *thrust* upon them: with the result that we see for ourselves almost daily. Even a willing horse, as everyone knows, must not be worked too much. The best rule, here as elsewhere, is moderation: the willingness to work within the frame-work of your capabilities: not, as some erroneously put it, finding out what you cannot do, and then going to do it. Public prints are not, I take leave to point out, exactly the places wherein to experiment with your heroism. The entire trouble, however, has—or so it seems to me—arisen in this way. There are so many papers in the world at the present time: likewise there are so many books that are being published day in and day out. What can the poor editor do in such circumstances? Book-reviews are, unfortunately, a "feature" in almost every journal of any

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...sions; and the hapless editor has, if only ...the satisfaction of not being outdone by ...others, to follow the prevailing mode, the ...ested fashion. Of course, if he were a man ...frustating originality he would throw con...porary usage to the winds, and would cease ...display this "feature" the moment he found ...some: he would rather *not* "clutch the ...ishable hope" of being able to make it a ...ess. But generally, as we all know to our ..., he is not a person of outstanding "guts," ...marked freshness of vision: the editor of ...treme originality being as rare as the flowering ...the aloe, or the laying of the phoenix's egg. ...he runs about hither and thither among his ...ends and begs of them the favour of reviewing ...books under the weight of which his table ...groaning. Muttering comminations within ...self he abjures them to do the thing somehow ...other. Well, to cut a long story short, they ...it. The result may be disappointing but what ...can one expect? One cannot gather grapes ...thorns, or figs of thistles; and by the same ...en, one cannot hope to get masterpieces of ...ticism and composition from those who simply ...e not the root of the matter in them. Let us ...once, face facts: in book-reviewing, as else...ere, many are called, but few chosen.

IV

This "disease" of modern life, if I may bodily ...e over a phrase of Mathew Arnold's and ...ly it to some modes of reviewing, admits of ...one remedy. I suggest that only those journals ...can afford both the space and the material ...ght to go in for this luxury: the rest mean...e being content to exercise a wise self-control ...not even trying to touch that which they can...t hope ever to adorn. And some books, let ...say as gently as possible, ought not to be ...ewed at all. Selection and centralization—...se are the two things that are greatly to be ...iderated. It would be best, of course, if one ...ld bring out a special supplement every week ...this purpose. The proprietors of the London ...es were never so happily inspired as when ...originated a separate publication under the ...name of the *Times Literary Supplement*, which, ...about question, is unique in its own *genre*: ...Cowley said of Pindar, it forms "a vast species ...ire pages every week, or even twice a week, ...ially for book-reviews: as is done, for ...tance, by the *Morning Post*, the *Daily Telegraph*, ...the *News-Chronicle*. Much useful work is ...ge performed in these papers by Miss Rebecca ...st and Sir John Squire and Messrs. Osborn & ...ld.

V

Something now remains to be said about ...w a book-review should be written. The ...thor's point of view must, in all cases, be kept before the reviewer's mind. Some sort of indication must be given about the former's trend of thought; and, however reprehensible it may seem to be, the latter must not lose his or her temper. I am perfectly aware that there are some situations when it becomes almost impossible to follow this injunction. Suppose the book under consideration is *Mother India*, or its sequel, *Slaves of the Gods*, written by that exemplary virgin, Miss Katherine Mayo, of Philadelphia, U. S. A. Suppose, further, that the reviewer is an Indian—preferably a Hindu. Well, I can, as the saying is, by all Lombard Street to a China orange that the latter will not be able to keep his head while reviewing the afore-mentioned books. On the contrary he will be tempted to explode: every cell of his body and mind being, if the expresion be allowed, on fire. But even in this extreme instance he will, I have not the least doubt, do well to a keep a tight hold upon himself. Our calumniator-in-chief may have, after all, a message to impart to us: and though that message is difficult to isolate from the heaps of vulgar abuse surrounding, and all but smothering it, like a costly jewel embedded in innumerable folds of cotton-wool, still the time, in my opinion, is not ill-spent, of the effort wasted, in "putting it across" to the millions and millions of people who inhabit our country. So long as a book is written with a definite and ascertainable purpose, that purpose must, it seems to me, be done full justice to, no matter what the extraneous circumstances may be. The only thing that we must not, on any account, tolerate is pretension: what the Americans call "high-falutin." Whenever, and wherever, this is detected we must take care to give a resounding thwack upon its back: such a thwack as Meredith extols in his famous extravaganza, *The Shaving of Shagpat*. For the rest, a little kindness is never out of place.

VI

Having said so much about a review being a faithful portrait of the book in question, I should like further to state that it should not, by any means, be a mere synopsis of it: else, where does criticism come in? A reviewer is a critic in little: at any rate, that is what my conception of him is. If one has sufficient space at one's command, one may let oneself go while one is reviewing a book: the only condition being that the book merits such treatment, and that the reviewer is a competent writer—one, that is, who can write simply and elegantly and interestingly. In such circumstances, one may, without great risk, write an independent essay on the theme of the book, at the same time keeping an eye on its central point, or points. And why not? A review should not be a mere catalogue or prospectus: it should have a life of its own. Some of the most distinguished reviewers have adopted this mode; and are, to put it mildly, none the worse for it. What, else, did the late Mr. T. Earle Welby—"Stet," of happy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

memory—do? Yet he was acknowledged to have been a prince among critics, the noblest Roman of them all. Mr. Robert Lynd, however, is of the opposite opinion. He advises a reviewer to go straight to the point, to pounce upon it like an eagle upon its prey. All I can say in reply to this is that in literature there is no such thing as going straight to the point, or pouncing upon it like an eagle upon its prey: in fact, there ought not to be. It may be the correct thing in science. But literature is something quite different, and we prize it for its delicious irrelevancies, for its majestic asides. To what does *Tristram Shandy* owe its well-merited fame? Or *Moby Dick?* Or *The Good Companions?* Or Mr. Shaw's prefaces? Or any of Mr. Chesterton's multifarious writings? In literature everything is excusable so long as it is not slipshod or uninterestingly done.

VII

Finally, no one, I venture to think, should write upon a book, or upon an author, with which, or with whom, for one reason or another, he does not happen to find himself in sympathy. Destructive criticism is the easiest thing on earth, and anybody can perpetrate it. Indeed it is quite possible, on this hypothesis, to write a damaging estimate even of Shakespeare that shall show him to be no better than an amateur in literature. This, however, is not to say, that criticism should flow in one uninterrupted stream of applause: it would be to err at the opposite extreme. No author,—not even the greatest that ever was,—is immaculate. Homer himself is said to nod. Taking the example of Shakespeare again, an excellent article could be written proving what a bad craftsman he was. There never, perhaps, was a more careless writer. Everyone remembers the famous retort of Ben Jonson when somebody was praising Shakespeare for not being in the habit of blotting out a single line of his manuscript. "Would to God he had blotted out a thousand!" All this, however, does not invalidate my argument. Some sympathy is demanded of him who sets out to appraise the works of an author. Moreover, if one examines critical writings closely, one will find that the best criticisms have invariably been laudatory. That is why Pater, as Mr. Robert Lynd has noted, called his book of criticisms, *Appreciations*. That is why, Mr. Chesterton's *Dickens* is the best book that has as yet been written upon that great novelist. My point is very simple. The critic, or reviewer, should not, as far as possible, say gloatingly: "I have come to bury Caesar, not to praise him." He should, on the contrary, come to praise him: all other things, of course, being equal. Else, let him keep away: there are others to do the job better than he.

PROMETHEAN CONQUEROR

By VERRIER ELWIN

Descendant of a royal race,
My coolie stumbles on ahead,
With body bent and weary face,
And an uncertain tread.

Across his back a pole is laid,
To either end of which he ties
A heavy basket, richly weighed
With Western luxuries.

He mounts upon a little rise,
His arms outstretched from side to side;
I see him dark against the skies,
Weary and crucified.

My comforts load him wearily,
His arms are stretched to hold them still;
His is a very Calvary
Upon that little hill.

Across the sad world endlessly
The humble suffer for our pride;
On the grim cross of luxury
The poor are crucified.

And to a million Calvaries
The poor are nailed by heavy toil.
We sit below, their garments seize,
And gamble for the spoil.

Yet even now our victory
Must on their cross depend;
That sad and solemn agony
Will conquer in the end.

And then the rich to beg will come,
In days of mental dearth,
And plead outside the poor man's home
For treasure not of earth.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

FALL OF THE MUGHAL EMPIRE: *By Sir Jadunath Sarkar, Kt., C. I. E. Vol II. 1754-1771. M. C. Sarkar & Sons, Ltd. Calcutta. 1934. Price Rs. 5.*

This is the second volume of Sir Jadunath Sarkar's great work on the fall of the Mughal Empire, the first instalment of which was reviewed in these columns some months ago. It carries the history of the empire down to 1771 and covers eighteen eventful years, the principal theme of which is the Afghan-Maratha contest for the lordship of Delhi. It is a story of horrors and rapine and political incompetence, redeemed only by the consolidation of British power in the Eastern, and Sikh power in the Western extremity of India. Sir Jadunath has treated his subject with a fulness of detail not to be found anywhere else and a competence which it would be impertinent to praise. Many doubtful points in the history of this obscure period have been cleared up in the light of sources not utilized before. The new volume of his latest, and we hope not the last, work makes us look eagerly forward to the instalments still to come.

GARGANTUA AND PANTAGRUEL: *By Francois Rabelais. Translated from the French by Sir Thomas Urquhart and Peter le Motteux. Newly annotated. The World's Classics. Oxford University Press. 3 vols. 2s. each.*

The Oxford University Press continues its services to culture by adding the famous work of Rabelais to the indispensable World's Classics Series. The version reproduced in these volumes is that of Sir Thomas Urquhart and Peter le Motteux, which if it do s not give us the exact word of Rabelais is certainly as fine an approach to the original as a translation could reasonably be expected to be. Besides the work is a classic of English translation-literature. Its value is enhanced by an introduction summarizing the latest researches on Rabelais and explanatory notes.

N. C. C.

RAJA RAMMOHUN ROY: *By Nalin C. Ganguly. Y. M. C. A. Publishing House, 5 Russell Street, Calcutta. 1934. Pp. Crown 8vo. 229+10. 7 illustrations printed separately. Popular Edition, Re. 1-12; Cloth, Rs. 2-8.*

Within the compass of 229 pages Professor Nalin C. Ganguly has given a very interesting. instructive and readable account of the life, achievements and personality of Raja Rammohun Roy. The book is well documented. Considering the multifarious activities of the Raja and the wide range of subjects—spiritual, theological, political, social, administrative, educational, economic, literary, etc.—dealt with in his writings, it cannot be expected that all his biographers will pronounce the same opinions on them. Mr. Ganguly's opinions, like those of other biographers of the Raja, may, therefore, be considered debatable by some. That does not in any way detract from the value of the book. What is commendable in it is that the author is not dogmatic, but gives reasons for his conclusions. He has worked hard and has succeeded in producing an impressive picture of his hero.

C.

NEO-HINDUISM: *D. V. Athalye. Published by D. B. Taraporevala Sons & Co., Bombay. Rs. 5-8, pp. 220, 1932.*

This is not a mere biography of Swami Vivekananda but it aims also at summing up his teachings which are grouped here under various heads. In times like these we cannot ignore the lessons which were taught by the great Swamiji who meant so much to Bengal and to India. He was an inspiring presence, and the book is a suitable introduction to the study of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

great personality. Mr. Athalye has already established himself as a biographer of repute, and his exposition of Swamiji's conception of Vedantism will be generally found useful.

There are, however, several inaccuracies and slipshod expressions in the book; *e. g.*, 'U. S. America' (p. 1), 'of so prime importance' (p. 21), 'low' for 'slow' (p. 12); Narendranath did not pass the 'Matriculation' Examination but the 'Entrance', and the groupings in the earlier University Examination results are called 'divisions', not 'classes' (p. 2); further, the Gazipur saint is 'Pahari' Baba, not 'Parari' as on p. 11. It may be fairly expected that these will be rectified in a later edition.

THE LAST ENCHANTMENT: *G. K. Chettur. The B. M. Bookshop, Mangalore. S. India. Rs. 5 net. 1934.*

Mr. Chettur had spent some memorable years of his life 1918-1921 in that city of serene intellectual atmosphere, Oxford, and we are treated here to a book of recollections, most of which, if not all, were published in the different periodicals between December 1921 and October 1933. The introductory chapter has lent its name to the volume. Mr. Chettur's verses and short stories have been appreciated by the reading public and his reputation as a writer of English is maintained in this volume. The book is both informative and pleasant reading and it succeeds in making Oxford (residence in which is justly considered as in itself a real help to a liberal education) and its influence felt by the reader. Dr. Spooner, poets Yeats and Masefield, Rabindranath and Sarojini Naidu, Arthur Symons and Canon Streeter,—are some of the figures which caught his notice and his comments on them as well as the social side of Oxford's life—not excluding College servants—are enjoyable. Mr. Chettur regrets there is no suitable translation of Rabindranath's verses and he doubts if he has risen to the "height of spiritual passion and loveliness" achieved in *Gitanjali*! This is a remark which will not be accepted as sound by those who have read the poet in his original Bengali,—but Mr. Chettur, we forget, has not read Rabindranath in Bengali.

While writing of Oxford's influence, the author fondly yearns after its parallel in the East, and longs for an institution "where adequate facilities are provided for the co-ordinate study of all the different cultures that have contributed to India's art and civilization—the Vedic, the Puranic, the Buddhist, the Jain, the Islamic, the Sikh, and the Zoroastrian, as well as the Chinese and the Thibetan (*sic*)," and where side by side with all these would be found the Western. The Calcutta University, in spite of its many deficiencies and limitations, has set forth this ideal envisaged by the writer in the passage quoted above, and sought to combine the different streams of culture into one full river; the success or failure of such a plan only the future can show.

We are, however, in perfect accord with the sentiments expressed towards the close, sentiments which do credit to an Oxonian and show the soundness of his training:

"We, who have been so ready to assimilate a foreign culture and a foreign language, must not forget that we have a duty owing nearer home; that whatever treasures we may gather unto ourselves, and however proud we may be of an accomplishment acquired, or of an understanding enlarged, little of value attaches to these, unless we are prepared to offer them in the spirit of devotion at the altar of the realization of our ideals and our nationhood."

PRIYARANJAN SEN

THOUGHTS FROM THE GITA: *By R. Krishnaswami Aiyar, M. A., B. L., Advocate, Tinnevelly. Published by the Madras Law Journal Press, Mylapore, Madras. Pp. XVI+191. Price Re. 1 only.*

Students of the Gita will find the book interesting in many ways. The author is a profound scholar and professes to give us what he calls a popular presentation of the teachings of the Gita. The Gita has been interpreted in so many ways and by so many persons that the addition of one more book to the existing literature on the subject will not materially increase the labours of the student. The jungle of scholarship through which he has to wend his way is already thick enough.

INDIAN SPIRITUALITY: *By Mohini Mohan Chatterji. Published by J. M. Dent and Sons Ltd., London. Pp. 253. Price 5s. net.*

This book contains an eminently well-written account of the travels and teachings of an Indian Saint. Those who wax warm over Indian Spirituality as well as those who do not, will find enough food in it for meditation. It is an informing book and will amply repay perusal.

U. C. BHATTACHARJEE

ON THE NATURE AND DESTINY OF MAN: *By Seyuan Shu. Central National University, Nanking. (Author's own Copy-right.) Pp. 183.*

Disclaiming all 'originality', the author of the book under review endeavours to present, as he writes in the *Preface*, those thoughts that have occurred to him during lucid intervals of the 'unrest and storm' he has had to pass through. Nearly all the greatest artists of the world confess having received their 'baptism of fire' during the *Sturm und Drang* periods of their lives; and Goethe, whom our author hails as 'a great master in the art of life' has evidently proved for him the abiding source of inspiration. Whatever their genealogical history, there is no gainsaying the point that these thoughts, although based on 'personal experiences', actually 'felt and lived', do nevertheless claim a universality of appeal.

We intimate in advance our agreement with the author's dictum that "the more I find to admire in the West, the more I have cause to love our own culture and the hoary wisdom of our ancient philosophers" (*loc. cit.*) To the purists in Aryanism, wedded to cultural exclusiveness, it comes, with the added authority of personal experience, as a timely warning! Instead of dogmatizing on the question the author remarks with pointed emphasis thus: "Profoundly as I have been influenced by Western thinkers, my views as here presented will be found, I presume, to be almost in perfect accord with the teaching of Confucius in its original purity and splendour." (*loc. cit.*) It is, therefore, no wonder that one, internationally-minded like him, should bear testimony to this effect: "The belief daily grows upon me that nationalities are nothing else than our accidental trappings, and humanity is one and the same everywhere." (*loc. cit.*) This luminous

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ght, it is refreshing to note, has been pressed ...the service of that perfecting of human relation... ...by means of "the same nobler instinct which is ...everyone of us and is in a sense divine." (*loc. cit.*)

We are introduced in Book One to the 'Sense ...the Tragic' which, as born of 'the disparity ...between the Ideal and the Actual world', has 'a ...similarly uplifting power' (p. 3). It is here, in ...the "discontent divine," that we discover 'the origin ...of every genuine philosophy of life'. (*loc. cit.*) In ...Chapter II ("On the Soul"), he prefaces his general ...survey of the inner world 'with the distinction be... ...tween the Mind and the Soul, or between the Under... ...standing (*Verstand*) and the Reason (*Vernunft*)' (p. 6) ...in the manner of Kant whom he claims to be 'a safe ...guide in philosophic thinking' (*Preface*). Developing ...this distinction he designates Mind 'the faculty of ...Concepts', and the Soul 'the faculty of Ideas'. Now ...Philosophy, it is interesting to learn, 'is no mere ...business of the Understanding'; it 'must spring ...immediately from a man's whole heart and soul, being ...a truth no less impassioned and personal than ...art' inasmuch as 'one thinks and knows only to ...the extent one feels, and what one feels is always ...conditioned by the kind of man one is' (p. 15). In ...fact, 'philosophers are only poets become perfectly ...objective' (p. 28). Discoursing 'on Religion', he ...says that 'it is nothing but the feeling of Ought ...that forms the ultimate basis of Religion' and ...Religion alone 'reveals the supreme End to which ...everything is to be subordinated (pp. 21, 22). Chapter ...III dwells 'on the Constituents of Personality ('A ...Study in Characterology')—on 'sensuality', 'desire' ...and 'love'. 'As desire is the principle of our sensual ...nature, so is Love the principle of our Soul. The ...object of desire is the pleasant, that is, whatever ...merely pleases for the moment; whereas the object ...of Love is the Beautiful, which while possessing a ...value at once intrinsic and permanent, reveals itself, ...though only imperfectly, in Nature, in Character, ...and in Art' (p. 39). 'Love alone admits us into the ...world of Ideas. There we behold the images of the ...Good, the Beautiful, and the Divine'. Finally it is ...the Sense of Duty that reveals the truth to us that ...we are not mere passive creatures, but also free and ...active Beings, that is, in a sense, creators, who can ...comprehend and can freely participate in the shaping ...of our Destiny' (p. 53). 'On the Nature of the ...World' (Chap. IV), he enunciates a creed that is ...thoroughly in tune with the Vitalism of our times. ...Life is exuberance, freedom and activity, that is, ...whatever springs from the expansion of Life, that ...constitutes the real and abiding Good, not feebleness, ...poverty, or constraint (p. 61). In chap. V ('On the ...Freedom of Will') our author gives a simple solution ...of the age-long, knotty problem of "free will"—a ...solution which might well redound to the credit of ...any professional philosopher. 'Man as well as every... ...thing else is conditioned by his immediate past, but ...he is also incessantly moulding and shaping his ...future' (p. 79). 'On Immortality,' (Chap. VI) he ...thinks, 'the only justification we can offer for our ...belief in Immortality is that most vital feeling of ...humanity, that the Good ought to triumph over the ...Bad' (pp. 86-87). Further 'no Good is ever lost, no ...Good ever perishes, we feel instinctively persuaded' ...(p. 89); and in a matter like this, metaphysical ...argumentation does not avail, for, as Bradley puts ...it, metaphysics is the finding of bad reasons for ...what we believe upon instinct.' The seventh chapter ...deals 'on God', and is both instructive and illumina... ting. The Idea of God, we are told, 'springs from the spiritual or moral nature of man,' and 'is, like all other Ideas, dynamic' (p. 90). But 'the existence of God is neither capable nor stands in any need of proof. Man can become aware of the Godhead only through the immediate apprehension of his Soul, never by any inference of his Mind' (p 91). Accordingly, 'all vehement outcry against idolatry argues stupidity as well as narrow-mindedness. It fails to see the fact that with idolators it is spirits or powers that form the real objects of worship, not the mere idols as such. A. France is perfectly right. when he says of Polyeucte, the great iconoclast, that he did not know how much that is divine and adorable can be contained in a wooden God' (p. 92). Book I terminates with a dissertation 'on the Meaning of Life' (Chap. VIII), which closes on the high-pitched key: "Life and whatever promotes Life is the Good. Nothing else is. And let there be the Eternal Yea" (p. 103).

Book Two similarly abounds in characteristic flashes of insight on cognate topics, such as, the 'Hedonistic Morals' 'Kant's Ethical System' 'The Ethics of Schopenhauer' 'Virtue and Knowledge' 'The Doctrine of the Mean' and 'Wonder, Reverence, and Mercy'. We regret, however, that the exigencies of space-economy would not allow as liberal quotation here as in the case of Book One.

SAROJ KUMAR DAS

THE GREAT DESIGN: *Edited by Francis Mason. With an Introduction by Sir J. Arthur Thomson. London, Duckworth, 1934. Pp. 324. Price 8-6.*

These are the days for symposia and omnibus volumes. Though written by fourteen scientific experts the *Great Design* does not weary the reader with much technical detail. Primarily written for the man in the street, it has its peculiar appeal for the earnest and advanced student of some of the intricate verities of the universe. Is the World a soulless mechanism; is it a work of blind chance; is materialism true? These are the main trends of the argument used and answered by these experts. As Sir Arthur Thomson puts it: "The study of Nature is as preoccupying as are the everyday interests of our life, yet in both fields we are continually pulling ourselves up and asking what it all means. At every corner there stands the great mark of interrogation, the Riddle of the Sphinx. Science has its own questions and answers: Whither, and How but beyond science is the not less inevitable question Why." This volume attacks the Why of the phenomena of the Universe and brings out the order and intelligence in nature. Beyond this nothing can be adequately described of the fourteen chapters which go towards making this volume. In the solitude of one's own library the *Great Design* is sure to yield thoughts and consolation which cannot be purchased. A great book indeed!

LANKA SUNDARM

THE SONG OF THE CARAVAN: *By Mirza Ahmad Sohrab, New History Foundation, New York, pp. 410.*

Four hundred and ten pages of weird writing, teaching the "ideals of new humanity" and imparting the message of "the Spirit of the World's Teacher." There is a weary series of sameness throughout the book, in all the battles, the adventures, the hair-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

breadth escapes. The author is no doubt the consummate master of high-flown language, and the many examples of attractive Americanism have decidedly stimulated his ingenuity. But literary skill has failed to make his seemingly luminous account of the Gor-Gor and other supernatural characters interesting enough for the reader. In perusing the chapter "Devil's Kitchen" we thought that after labouring through 314 dreary pages of flowery language we had at last some fun in store for us,—"the Devil loves his stomach best," but as one proceeds the description of the kitchen supplies no appetizing aroma either, and even the feeder on the coarse Sexton Blake series is disappointed. There may be a sufficiency of grounds on which, in other quarters, the book may be regarded as a more heart-reaching production; but sustained scrutiny makes that theory also almost untenable. In the detective stories written in the U. S. A. the adventures have no connection with religion, and juvenile readers are easily attracted. The present work deals with Buddha, Mahomet, Christ and others. The Army of the Stars, the Vagabonds and other regiments can hardly be expected to satisfy young readers who do not thirst for a joke with a religious moral; and as the book is written in the ideal penny-horrible style, we think the argument is a spacious one that maturer readers too do not wish to be taught any "new ideals" in so Nick-Carter a manner; and it is difficult to expect the book to be anything else than an imperishable memorial of an outlandish teaching method.

CRITIC

SELF-REALISATION: *Life and Teachings of Ramana Mahanti: By B. V. Narasimha Swami. Published by Niranjanananda Swami, Secretary, Ramanasram Tiruvannamalai (Arunachala).*

Ramana Maharshi is a saint of Southern India. He was born on 30th December, 1879. Before he took orders his name was Venkataraman. But we will not pursue his uneventful worldly career, we at once begin and end with two quotations, and leave the reader to form his own opinion. In the foreword written by a Madras High Court Judge, Mr. K. Sundaram Chetty, we find the following as the saint's view on Happiness: "Happiness is really an inner attitude, or a subjective realisation of the mind, though many are under a misapprehension that it depends upon external conditions only." Though a Sannyasee in all outward appearance, there is nothing medieval about him. Rather, he is quite modern in his view of the self to be realized in this our mundane existence. He does not preach otherworldiness, which is the bane of all old orthodox religions. Says the author (p. 223): "The basic principles of Maharshi's saintly life,—*Ahimsa, Samatva* and *Sarvahitatva*, *i.e.*, Harmlessness, Equality and universal benevolence naturally lead him to approve of the liberalising and humanising aspects of social reform. Persons of the depressed classes have long been his immediate attendants and are treated exactly as though they belonged to the higher classes. The question was raised in 1917 whether women and sudras were fit to be given vedic teaching and to be inducted into the mysteries of Self-realisation. Maharshi without any hesitation answered it in the affirmative and has in practice imparted instruction to women and sudras, whatever the Brahmasutras and the commentaries thereupon might say. The tendency of spiritual aspirants has generally been to shun society, not merely in the initial stage of preparation but even later. Maharshi, on the other hand, is fully in sympathy with the tendency of present-day ethics to stress social service rather than the perfection of the individual ascetic in isolation, and to note the importance of society even for the perfection of individual character."

JESUS THE WORLD SAVIOUR AND COMING KING: *By B. L. Chandra, Rai Bahadur. Calcutta. Printed at Metropolitan Printing & Publishing House, Ltd. 56, Dharamtala Street.*

The author is dead but as the book has been sent to us we are obliged to make some remarks on it. The book has been written from a very crude orthodox point of view, quite oblivious of the higher criticism which has torn to shreds the traditions of Christ and Christian history.

DHIRENDRANATH VEDANTAVAGIS

NICHOLAS ROERICH, PAINTER AND PACIFIST: *By R. C. Tandon. Published by the Roerich Centre of Art and Culture. Allahabad, 1934.*

"This short Monograph was prepared for the occasion of the opening of the Roerich Hall of the Municipal Museum at Allahabad." It contains a short account of the various activities of the celebrated Russian artist. Roerich Museum has been founded by him in New York, with its branches all over the world. "There are today more than seventy Roerich societies dotted over twenty-four countries. Urusvati Research Institute is founded in the Himalayas at Kulu in the Panjab, where Roerich has now settled.

Roerich is a great explorer. He has been in "Little Tibet, over the Karakoram Pass to Chinese Turkestan, across Mongolia and Tibet, completely encircling the heart of Asia."

Roerich is a pacifist. He wants to bring peace in the world through art. His remark on art is "Art is for all———Bring art to the people—where it belongs."

We should have not only museums, theatres, Universities, public libraries, Railway stations and hospitals, but even prisons decorated and beautified. Then we shall have no more prisons.

MANINDRA BHUSHAN GUPTA

RUDIMENTS OF COMMERCIAL GEOGRAPHY: *by M. A. Ghare. Sajjangadi, Baramati. Price As. 8.*

A very indifferent compilation.

VARENDRA RESEARCH SOCIETY'S MONOGRAPH NO. 5: *Varendra Research Society, Rajshahi, Bengal. 1934. Pp. 52 and 9 plates.*

The monograph contains a few useful and interesting articles on Epigraphy, Ethnology, Architecture and Literary Archaeology. Mr. Kalidas Dutta's description of "The Antiquities of Sundarbans" reveals the interesting fact that there were several examples of the *deul* type in that region. Our author equates them with the temples of Bhubaneswar; but they rather belong to a specific local type which grew up in West Bengal (Bankura, Birbhum and also Man-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ment in imitation of the Rekha temples of Bhubaneswar, but which had a sufficient amount of difference to mark it off from the parent style. Mr. Kshitish Chandra Sarkar's Catalogue of aboriginal rites and customs in Chutia Nagpur is very interesting, but it lacks details regarding the exact localitias where each ceremony is observed or the particular tribes or castes to which each is confined. If these details are added the paper would be of great scientific value. Dr. C. N. Ghoshal contributes an interesting history of a forgotten seat of learning named Somapura in North Bengal. There are a few more interesting papers on a very rare work on Sanskrit Prosody, namely, Purushottama Bhatta's Chhandomakhanta, one on a copper-plate grant of Ranavankamalla Harikaladeva, on the iconography of Aghora-Rudra and on the Vrindavanakavya and its author.

NIRMAL KUMAR BOSE

MASS EDUCATION IN INDIA WITH SPECIAL REFERENCE TO THE BOMBAY PRESIDENCY: *By R. V. Parulekar. Published by C. D. Barfivala for the Local Self Government Institute, 9, Bakehouse Lane, Bombay.*

In view of importance, the problem of primary education in India has not been studied to the extent to which it should have been. Hence this little monograph by Mr. Parulekar is a welcome addition to the existing meagre literature on the subject. Though he confines his study to the problem as it exists in Bombay yet it deserves attention from others in other parts of India.

The monograph is divided into two parts; the first contains his study of the position of primary education in the Bombay Presidency, discussions of what he considers to be its chief defects and his suggestions for remedying them. In the second part Mr. Parulekar has given some notes and documents illustrating relevant points in the condition of primary education in other countries and supporting his arguments advanced in the first portion of the monograph.

Mr. Parulekar rightly observes that "the progress of India is dependent largely upon the extension of mass education and that this reform cannot be delayed too long since on it hangs the future destiny of India." He says, "the problem is one of making the masses of this country literate." Now education and literacy are not synonymous though there is a close connection between the two; and herein lies the chief ground for criticizing all suggestions for the extension of literacy (as distinguished from education) among the masses in India. Mass literacy is not mass education and though literacy goes a long way towards education it does not, as has been abundantly proved in the West, necessarily lead to it. We however admit that literacy is a necessary tool and so if we cannot provide for education of the masses we can at least place that within their easy reach. But by doing so let us not have the false satisfaction that we are *educating* the masses.

Out of three children of school-going age only one is in attendance at the primary schools in the Bombay Presidency. Extension of primary education (as understood by Mr. Parulekar) in this case would mean making provision for the other two who are now staying away from schools. Mr. Parulekar considers the problem in that light and his recommendations are directed to that end. At the outset he makes the rather dismal statement that at the present time we cannot expect more money for education either from the Government or of the Local Bodies; and consequently we will have to carry on the programme of extension "within the possible resources at our disposal." Perhaps most of us under the circumstances stop talking about further expansion but Mr. Parulekar does not. He believes in number and in expansion and he is prepared to go on with his scheme at all costs. His suggestions for that purpose are (1) Reducing the period of primary School course from 5 to 4 years; (2) Raising the minimum age of admission from 6 to 7; (3) Simplifying the curriculum by concentrating on the bare essentials, *i. e.*, the three R's; (4) increasing the number of pupils per teacher from 30 to 60; and (5) adopting the Shift System or variation thereof.

We are prepared to agree with the first two suggestions. By adopting them we may certainly effect some economy and thereby help further expansion. Through effective teaching the primary course can be shortened without detriment to the pupils. It is a pity that while in the West the educationists are thinking of extending the scope of primary education to include the children of even the pre-primary level we in India, for lack of funds, should be compelled to raise the school-going age. But perhaps under the existing circumstances it cannot be helped.

When we come to the third suggestion of Mr. Parulekar, we think we cannot accept it. It goes against all modern ideas of education. Every educationist knows that over-emphasis on the three R's defeats its own ends. Certainly the curriculum should be simplified but not by the exclusion of essentials. Subjects are ever-shifting boundaries in the field of knowledge and over-emphasis on subjects *per se* is apt to hamper the unity of knowledge which is essential for education. It is only by treating these subjects as seperate entities that difficulty arises. Unfortunately we are very often given to that fault. But if these subjects are treated as natural interests of children their inclusion in the curriculum is not only essential but their exclusion may be harmful even for literacy. We are of opinion that history, geography, etc., should be included not as subjects but as activities and interests.

Unfortunately, in making this and the following suggestions (*re* the increase of pupils per teacher) Mr. Parulekar takes up the most unfortunate attitude of precedents and supporting his arguments by citing the practice in use in other countries, in the past. His idea that "what was considered good for the masses in England, Germany, Japan and other countries would not be considered as unwholesome for the good of the masses in India" (p 17) cannot but be too strongly condemned. We should never copy the mistakes of others but should learn by them. What was prevalent in other countries forty years or more ago when they first introduced primary education and suffered from inexperience in the matter should never guide our course. Even in those countries experience, matured considerations and enlightened opinion led to reformations. Instead of old practices these reforms should be our precedents. Whereas in other countries the movement is towards decreasing the number of pupils per teacher Mr. Parulekar advocates the retrograde step of doubling it. But he too has to confess that "the lesser the number of pupils per teacher the better it is for pupils" (p 19). It is hard to reconcile his confession with his recommendation. Only an over enthusiastic protagonist of expansion can agree with Mr. Parulekar's suggestion on this point.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

But perhaps a remedy can be found and this has been suggested by Mr. Parulekar in his fifth recommendation, namely the introduction of the Shift System. This system has been tried effectively in certain places and should be widely experimented with. That and the introduction of methods of plural class teaching may together allow us increase the number of pupils to some extent.

But after all one is not convinced that expansion rather than improvement should be our immediate objective in the field of primary education. For it still remains to be proved that bad education is better than no education.

FLYING VISITS BEING A RECORD AND IMPRESSION OF A TOUR IN EUROPE. *By S. M. Pagar. The Times of India Press, Bombay.*

One wonders why a book like this is written and published except if it be for dedicating it to noble personages.

ANATHNATH BASU

HITLERISM OR THE ARYAN RULE IN GERMANY : *By Saumyendranath Togore, pp. 106, Calcutta, 1934.*

It is an undeniable fact today that the apologists of Hitlerism have been carrying on a systematic propaganda in India for a long time. The propagandists, sometimes of Indian origin, out-Heroded Herod in their profession : it was highly amusing to all that when the Nazi propaganda minister Goebbels himself at Geneva deplored the excesses of Nazi storm-troopers, his agents in India never hesitated to declare all such rumours to be false. Obviously they counted on the ignorance of the Indian people. Now the inevitable reaction has set in and Mr. Tagore's book is perhaps the first of its kind in India and it is sure to be followed by others. The people of India, whose ignorance has been wrongly exploited by Nazi propagandists out of interested motives, will now get a glimpse and of the other side of the medal.

The volume under review is descriptive and not analytical. Perhaps it is better so, for it is written obviously for the purpose of counter-propaganda among the masses,—the emphatic expressions, of which the book is full, clearly show that it is not a dispassionate and objective criticism of Hitlerism. Yet the facts recorded in this volume cannot be denied by anyone acquainted with the real state of things in Nazi Germany. No amount of sophistry, paid or unpaid, can explain away the atrocious cruelty inflicted on Jews, socialists and communists; none but the blind will deny that a recrudescence of pre-War militarism is clearly perceptible today and that Odin and Thor are well on their way to being re-installed on the throne of Christ; only those who have never tasted the fruits of German art and literature will beam benevolence on this unholy fascist regime which spells death to refinement and culture.

Yet, something can be said in apology for Hitlerism. It would be doing injustice to Germany if we do not recognize that the German nation has completely lost its power of reasoning,—that Germany has been actually driven mad by the callous English and the vindictive French. Who was the greatest ally of Hitler in his struggle for power? Obviously the cruel and narrow-minded French premier Tardieu, who took every opportunity to inflict a crushing humiliation on Germany in bondage. He and his school rediculed Strasemann and Bruening when they demanded that Germany be granted what by right belongs to her, and at every fresh insult Germany growled in helpless rage. At last, driven into despair Germay threw in her lot with Hitler. Tardieu in Paris and Benes in Prague are trembling in their shoes today at the rise of Hitlerism, but it is they who are directly responsible for the successes of Hitler.

The rise of Hitlerism has been often called a unique event without parallel in history. But a student of history would hardly acquiesce to such a view. Hitlerism, rightly interpreted, would be found to conform fully to the historical tradition of Germany.

The Germans stepped into the history of the world for the first time when they dealt the deathblow to the fast disintegrating Roman empire. Satiated with culture and enervated by luxury the Romans had lost all capacity for organization and failed to adapt the old institutions to their own times. The Germans appeared on the scene, completely demolished the old social and political structure, and considerably simplified the older institutions and thus rendered them again useful to mankind. Many have shed tears over the decline and fall of the Roman empire but few have appreciated the great service rendered to humanity on that occasion by the Germans: when the antique world was passing away and all the nations found themselves entrapped in an *impasse*, out of which no way could be found, the Germans imported fresh vigour and gave the lead. If their first impact civilization doubtless sustained a tremendous set-back, but when it again resumed its onward march it far exceeded the highest limits reached by the older culture. Again towards the end of the mediaeval age the great Catholic Church which for a whole millennium had been the fountain-head of western civilization and culture, showed all the signs of senility and old age. The civilization had grown so complex and individualistic that no motif for collective culture could be found anymore The world was confronted with another deadlock of civilization. Again it was reserved for the German Luther to initiate the great Reformation which replaced the old complex religion by a simpler one and thus laid the foundation to modern civilization. At the present day the world is passing through another crisis of unprecedented magnitude. In spite of undreamt of advance in every branch of knowledge the modern man finds himself a complete bankrupt, unable to formulate even a tentative philosophy of life. The proudest products of modern civilization are all, without exception, prophets of pessimism and the prevailing mood is that of a tired indifference. A healthier view of life is necessary even if mankind would only consent to live. No sacrifice is too great for it, and the least that we should have to concede to is a partial curtailment of our modern civilization. Perhaps Hitlerism is nothing but this partial curtailment.

Hitlerism can therefore be fully explained by history. Perhaps in the long run Hitlerism will prove to be beneficial to human civilization just as the Germanic invasion of the Roman empire and the Reformation have been. Yet ordinary mortals cannot live beyond present actualities and the Nazis themselves are but blind instruments of history. Hitlerism too is therefore to be considered in the light of the usual ethical code which bases its judgment on immediate causes and immediate results. This code of morals will certainly give the verdict of guilty on Hitlerism.

BIBHUTI BHUSAN BANERJI

SANSKRIT

BHATTADIPIKA OF KHANDADEVA BHATTA WITH BHATTACHINTAMANI OF ...NCHHESHWARA YAYYWA: *Edited and ...blished by late Mahamahopadhyaya Venkata ...brahmanya Sastri of Tirubeshlur and then ...ya...swami of Bugga. 668 pages, cloth bound, ... Rs. 6, printed at Madras Law Journal ...*

We do not know how best to express our deep ... of gratitude to the most revered Jagatguru Sankaracharya of Kanchi and Pandit Arya Swami Sastri for their persistent effort and zeal in bringing out this invaluable book of Mimamsa Philosophy notwithstanding the series of obstacles of which the editor has given a detailed account in the preface, caused by the lamentable death of two successively appointed editors, since it was first taken up for publication. For the complete mastery of the Mimamsa Philosophy and consequently of the Vedic principles, Bhattadipika of Khandadeva with its commentary Bhattachintamani by Banchheshwara Yayywa is considered absolutely necessary as Tattwachintamani of Gangesha Upadhyaya with its commentary, the Didhite, by Raghunath Siromani is regarded indispensable for the mastery of Nyaya Philosophy. As the precision and accuracy of Nyaya Philosophy culminate in its new school so they do in the Bhattadipika of the new school of Mimamsa. The appearance of Nabya Nyaya eclipsed the excellence of all other Phllosophies so much so, that in order to re-establish their pre tige and superiority Vedanta was recast by Anandabodhendra and then by Chitsukhacharya, and Mimamsa by Khandadeva and his followers. To understand Vedanta rightly just as Nyaya is considered indispensable, so is also the Mimamsa and even more. Thus by the publication of this volume yeoman's service is, no doubt, done to the earnest readers of Vedanta Philosophy. The editing, the printing and the get-up of the book are all excellent. The price too is inexpensive. The introduction is writ en in a true historical spirit, which is rare amongst the scholars of the old school. The language of the commentary is so simple lucid and elegant and just to the point, that both the tyro and the vet•ran will be greatly benefited by it and it will facilitate the acquistion by the reader of the highly philosophical and abstruse expressions of the Nabya Mimamsa, the Bhattadipika.

In short, I believe that if the example set forth by the most revered Samkaracharya of Kanchi, in encouraging the publication of such treatises, is followed by the heads of other *mathas* and religious institutions, who are in a position to command both men and money, then the immense mass of the Sastras, which is unquestionably still the only glory of our country and nation, will be saved from gradual decadence and destruction. In the meantime we shall be anxiously awaiting the completion of the book.

RAJENDRA NATH GHOSE

SANSKRIT—ENGLISH

ISTA-SIDDHI OF VIMUKTATMAN WITH EXTRACTS FROM THE VIVARANA OF JNANOTTAMA: *Critically edited with introduction and notes by Prof. M. Hiriyanna, M. A. Gackwad's Oriental Series; published at the Oriental Institute, Baroda. Price Rs. 14.*

Ista-Siddhi, the book under review, ranks as one of the most authoritative and comprehensive works on the Advaita Vedanta, specially on the side of its dialectics. Held in importanec, as great as Brahma-Siddhi, Naishkarma-Siddhi, Samkshepa-Sariraka, Panchapadika Vivarana, and Advaita-Siddhi, this book was once read by everybody aspiring to be an *Advaitin;* but if, unlike those other books, this one is comparatively unknown now-a-days, that is because it was not availible except in manuscripts. Prof. Hiriyanna has therefore earned the gratitude of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all lovers of Indian Philosophy by bringing this almost lost treasure of our ancient culture to light.

The texts of the book edited from various manuscripts, as well as the numerous extracts from Jnanottama's tika on difficult passages, all point to the patient labour devoted by the editor to this work; while the elaborate notes as well as the introduction, characterized by lucidity, accuracy and cautiousness, are proofs of his scholarship. One has only to read the introduction,—particularly the part of it devoted to the discussion of the philosophy of our author—to be convinced of the vast erudition of the editor, his thorough grasp of the Advaita Vedanta and his charming method of presentation of the same.

The only instance where the editor seems to have discarded his habitual cautiousness, is where he makes an assumption in fixing the date of the author.

I cannot bring this to a close without a request to the editor, to consider the desirability of bringing out another edition of this book, preferably with a tika, but without it if necessary, and at a price within the means of the pandits and the students, who constitute the major portion of the readers of such books.

ISAN CHANDRA RAY

BENGALI

SRI NIMBARKACHARYA AND HIS DOCTRINE: *By Sj. Pulin Behari Bhattacharya, M. A. Judges Court, Sylhet. Pages 152. Re. 1-8.*

The book is organized into some eighteen chapters together with a foreword from the pen of Professor Nalini Mohan Sastri of the Murarichand College, Sylhet. Here, in this book has not only been given a biographical account of Sri Nimbarkacharya but also a history of the sect founded by him. The philosophy of the sect has been critically studied not in isolation but in comparison with the doctrines of the other systems of philosophy, particularly with that of the Advaita School of Sri Sankaracharyya.

The author has such an attractive manner of putting abstract things in simple language that an inquisitive reader will hardly leave the book aside, without going through the whole. He not only furnishes the reader with a lot of information on the subject, he has been avowedly writing, but on kindred topics as well. In short, it is so well-written and informative that we shall not be charged with exaggeration, if we characterize it as a *vade mecum* for those wishing to be acquainted with the tenets of the Nimbarkara School. Of late Nimbarkara School has become very popular, mainly through the untiring zeal and energy of Sri Santadas Babaji of Brindaban. To the enquiring layman, desirous of being enlightened on the teachings of this growingly popular School, we cannot recommend a better book than the one under review It is natural that in books of this nature discrepancies and inaccuracies may creep in here and there, we hope and feel sure, that the following instances, which we of course point out in a friendly spirit, would be rectified by the author in subsequent edition. In the first place, the date of Sankaracharyya is said to be 676-780 A. D. (page 56) and it is fathered on me, although my date is 686-720 A. D. Secondly, the author appears to have no right comprehension of the doctrine of Sankaracharyya, as is evident from his distorted explanation of the import of "mithya". Moreover, there are occasional instances of self-contradictions and want of logical application too. However, these are minor points, and should not be taken as casting any reflection on the general merit of the book.

RAJENDRANATH GHOSE

MARATHI

साम्राज्यासाठी (*For Empire*): *By Mrs. Shantabai Nashikkar. Pages. 366. Price. Rs. 2-8.*

This is a historical novel describing the kingdom of Vijayanagar. Abundant natural scenes are given, but all of them are unattractive and loathsome, a few Sanskrit words are used in wrong senses, though the writer is one of the eminent lady writers in Maharashtra. The Marathi knowing reader is puzzled at the identical proper names of different persons in the same chapter. The author has described the passages of love, murder and politics intelligently. Villains are depicted darker than what they are described in the history.

V. S. WAKASKAR.

GUJARATI

PANCHDAND IN VARLA: *by Shankar Prasad Chhaganlal Rāval, published by the Forbes Gujarati Sabha, Bombay. Thick Card Board. Pp. 171. Price 12 annas (1934).*

The Forbes Gujarati Sabha of Bombay owns several old Gujarati MSS, and as opportunity offers is making them available to the public one after another. About four such valuable MSS, have already been published with annotations. Mr. Raval has made researches in connection with one of such MSS. *viz.*, the poem of Narpati Kavi, composed *circa* S. Y. 1560, and published it under the name of the Story of Panchdand, one of the phases of the life of King Vikrama, who, Harun-ul-Rashid-like, used to go about at night in his capital city and learn its secrets. The introduction and annotations are very creditably written in a scholarly way which goes to prove the writer's love for his work.

RAM NAGAR NO RAJVI: *by Balakram Hari Narayan Pathak, printed at the Gandhi Printing Press, Surat: Cloth bound: Pp. 210. Price Rs. 2-8-0 (1934).*

The modern state of Dhurampur, near Bulsar (known as belonging to Prant Ram Nagar), is situated in what is known as North Konkan. Its *gadi* has been occupied by the Surya Vanshi Sisodia Rajputs, and it has played a very prominent part in the old and mediaeval history of Gujarat. It consequently possesses many brilliant Chapters, in which Valour, Courage, Chivalry, and the observance of promises given at final sacrifice, stand out pre-eminent. The story narrated in these pages deals with these praiseworthy characteristics of its rulers and begins with the times when its King Maharaja Somdev (A. D. 1680) was ageing but the state was still possessed of its pristine glory. It furnishes interesting reading.

THE WATERS OF DESTINY

By SITA DEVI

XV

SUDARSHAN came forward with a smiling face as soon as he saw Suparnā alighting from the car. "Don't be frightened" called Amitā, "seeing that we have arrived minus food. It is in the car behind and will be within five minutes. The other cars were no ch for this one, though all three started at same time".

"It is a mercy that the car with the food did arrive first", said Sudarshan in reply. "It ld have proved too great a shock for me and ight have gone away in despair".

"Oh indeed!" said Amitā. "Though you are octor, you are quite good at making pretty ches".

Suparnā did not join in their conversation, went forward with Gargee. Sudarshan cast a of deep admiration at her, which caused a moil in her heart. She tried to thrust away e thoughts from her mind, but they insisted oming back again and again and attacking citadel of her heart. Everything seemed to be ling her towards a forbidden paradise. Even own mind was beginning to prove a traitor. he could not pull up in time, there was no ning where she might be carried away.

Seeing Suparnā walking away so fast, Amitā e chase and shouted, "Where are you running r, Su? Have you seen a tiger?"

Sudarshan was coming with them. He erstood this effort of Suparnā for getting away n him. He understood, at least partly, what ght underlay this effort. The god of love les his proteges to understand each other's even if they do not exchange words. The thoughts they try to hide behind a thousand s become clear like reflections in a mirror.

"Let us go and have a look at the garden- ngements as I could. But I am no good at things and must have committed a thousand ders".

They all advanced towards the garden-house. e garden was very large and very well-kept. garden-house was not very big. The owner old and broken down with sorrow and care. as he was a rich man, the place has not entirely neglected. The house consisted of stories. There was a big hall on the ground- and another on the first-floor. There was a very big portico. There were smaller rooms bathrooms also. Both the halls were very furnished and decorated. The sunlight shone full on huge mirrors, hung on the walls, and large oil-paintings could be seen everywhere.

Most of these paintings were of beautiful women. A few of these paintings were covered with brown cloth. Amitā smiled and pinched Indu on the sly. She could not say anything aloud, as Sudarshan was with them.

Both the halls were carpeted with rich Persian carpets. Sudarshan had made the servants take away the carpet from the lower hall and had left only a *durree* there. He looked at Amitā and said, "We can have our feast here and the men can also kick up as great a row as they please in the afternoon, in this place. So I have had the carpets removed. What is the good of destroying a beautifnl thing? The upper hall I have not touched. You can use it."

"But where are the rest of your party?" asked Indu. "We don't see anyone besides ourselves."

"They have not all arrived," said Sudarshan. "Six or seven are here, they are walking about somewhere in the garden. Why don't you come also? What is the use of getting indoors so early?"

The gardener came up to them running and said that two other cars had arrived and a gentleman was asking for Sudarshan.

"Then aunt and the others have arrived at last," cried out Amitā. "Let us go and see whether the curries and the sweetmeats are safe."

"What could happen to them? asked Suparnā. "Nobody could have eaten them up on the way."

"But they could have fallen down on the way." Said Indu.

They all went up to the gate again. Taran Babu was alighting from the car with his party. The car containing the food was ordered to drive up to the garden-house, where the servants took down everything and carried them indoor. These things were locked up in a small room.

"Now we can walk about, all we like," said Amitā, "without any fear for the food."

The party began to walk about again. Taran Babu asked Sudarshan, "Has not your father arrived?"

"He will be here after a while," said Sudarshan. "It is too early yet for him to move about."

In the course of their walk, they met Sudarshan's friends. They were introduced to the ladies, but they could not make good use of the occasion. The ordinary Bengali youth is unaccustomed to talk freely to unrelated women

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or to behave in a natural manner in their presence. So after a while, they dispersed again. Taran Babu got tired after a while and returned to the garden-house. "I shall go and sit inside," he said to Sudarshan; "when your father arrives, I shall talk to him."

Amitā's aunt was not for retiring so soon, but she saw that her presence was acting as a check on the high spirits of the girls, they were afraid to let themselves go. So after a while, she sat down on a bench and said, "Run along, girls. I am too old to run with you. I shall rest my old bones for a bit, then walk on by myself."

The girls were quite willing. They ran on and soon disappeared, leaving the old lady behind.

Sudarshan was accompanying the girls, as it was part of his duty, as a host, but mainly because he could not bear to let Suparnā pass out of his sight. But he was afraid that his own friends might feel offended and pass unfavourable comments, if he left them too much to themselves. He was trying to find out a way, by which to bring them all together. There was a beautiful stone-built sitting-place in the middle of the garden. He came up to it and said, "We can all sit down here and have some music. It is not too hot yet."

"That is a good suggestion," said Amitā. "I say Gargee, where have you left your *Vina*?"

"She could not have carried it on her shoulder all this way," said Indu. "If you want it, then Sudarshan Babu will have to fetch it."

"With the greatest pleasure," said Sudarshan. "I shall also bring along the audience with me."

Sudarshan went off with rapid strides. After a few minutes, Amitā suddenly gave a jump and cried out, "Have you got my keys, Su?"

"Why should your keys be with me?" asked Suparnā in surprise. "Have you lost them?"

"Goodness gracious!" cried Amitā in dismay. "Those keys were very important. Where could I have dropped them? If I have left them somewhere in the garden, then we are all done for."

"You left your fan, scarf, handbag and many things else in the big hall on the upper floor. Have not you left the keys there also?" asked Suparnā.

"Please go and have a look, Su," said Amitā anxiously. "I shall look in the garden in the meanwhile. If I don't find them, it will mean disaster for us all."

Suparnā got up without demur. If the bunch of keys was really lost, it would mean serious inconvenience, they might have to go without food even. The key of the storeroom was in that bunch.

As soon as Suparnā had gone out of sight, Amitā burst forth into a peal of laughter.

Gargee could speak Bengali very well, though she was a Deccani by birth. She gave Amitā a playful blow on the back and said "Why are you laughing like that, you monkey?"

Amitā took out a bunch of keys from inside her blouse and held it up for them to see.

"Then why did you send poor Su, on a wild goose chase?" asked Indu in surprise.

"I have not sent her to chase a wild goose," said Amitā in great glee. "I have sent her out in quest of the flower of heaven."

"Was there a conspiracy between yourself and Sudarshan Babu?" asked Indu. "I hope you have extorted the promise of an adequate reward from him." All the girls began to shout with laughter.

Suparnā covered the way with rapid steps and reached the garden-house very soon. She found that Sudarshan's father had arrived and was talking to Taran Babu in the lower hall. Though he was not very old in years, yet he had become quite decrepit and could not move about without help from others. He was seated in a big armchair, wrapped up in a big shawl.

As soon as Suparnā entered, Sudarshan's father asked Taran Babu eagerly, "Is this your daughter?"

"No, this is Suparnā," Taran Babu replied. "My daughter also must be somewhere near."

Suparnā came forward and bowed down to the old man. He placed his hand on her head and blessed her, saying, "May you be ever happy, and make all happy."

Suparnā moved off hastily. The old man seemed to have heard about her. He could have heard it only from Sudarshan. A flush rose to her cheeks at this thought.

She came up to the upper hall, but stopped at the door in surprise. Sudarshan was standing there alone and looking at something intently. He had not heard her light footsteps. She advanced a few more steps and saw a scarf of printed Jaipur silk in Sudarshan's hand. It belonged to her, and she generally used it while out motoring.

She was thinking how to announce her presence to him, when he did something that took her breath away. He held up the scarf and kissed it quickly. Then he looked up, startled perhaps at the sound of her deep breathing.

Both were silent for a minute. Suparnā felt like a criminal, her breath came in gasps, her face had turned white as a lotus, she could not even lift up her eyes to Sudarshan's face. Sudarshan's lips held a slight smile, he was not looking at all embarrassed. He appeared to be trying to put his thoughts in words.

Still, it was Suparnā who spoke first. She cleared her throat with effort and asked in a low voice, "Has Amitā left her keys here? She cannot find them."

"No, I have not seen them," said Sudarshan. "I came here to get the *Vina* and was detained.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Suparnā become silent. Sudarshan understood and said, "Don't you think that what has happened, has happened for the good? I wanted with all my heart to make you understand what I felt, yet I could not find words to express it. It is well that you know it now. I am a rough medical man, and have no command over language, but I feel no less than the greatest poet on earth."

Suparnā was moved to the core of her being. Yet she tried to move off. She saw paradise gleaming before her, but alas, she had no right of entry there. God had exiled her forever from this realm of happiness. According to the laws of society, she had no right even to listen to these words. What could she answer then?

"Have you nothing at all to say?" asked Sudarshan. "Cannot I even expect a reply to my words?"

Suparnā turned dizzy with conflicting emotions. She covered her face with both hands and cried out, "Please don't ask me anything. I have nothing to say."

But her manner of speaking, her expression, her voice, belied her words. Sudarshan came and stood by her. He took away her hands from her face by force and held them in his own. "Why Suparnā?" he asked in a tone of deep emotion, "have I no hope at all? Then tell me that."

Tears rolled down Suparnā's cheeks. These tears roused fresh hope in Sudarshan's heart. He released Suparnā's hands and drew her into his arms and crushed her to his heart. "I know you love me, my darling," he said, "then why don't you want me to know it? I know I am not worthy of you. But make me worthy. I cannot live without you."

Suparnā struggled out of his arms. She felt ready to faint. She moved off slowly and said in a trembling voice, "You are mistaken, I cannot love anyone."

Sudarshan came close up to her again and said, "Why do you say that? Nobody would believe it of you. It may be that you do not love me. My own feelings have made me mistrust you. Is not that the case?"

But Suparnā had nothing to say. She only bowed and wept. Sudarshan saw that she was trembling violently. He put back her scarf on the table and said, "Please sit down here and rest. I am going away. No one will disturb you. And forgive me for having caused you pain needlessly. But it is all a mystery to me. I have not understood you clearly."

He picked up Gargee's *Vina* and went down. Suparnā flung herself down on the carpeted floor and wept tears of agony. She had hidden her feelings in the darkest depth of her heart and never acknowledged it even to herself. But this blow which was destroying all her hidden hopes, had also made everything very clear to her. Only in the moment of losing everything, had she understood what she was losing and how empty her future life was going to become. Only to-day did she understand how deeply she had loved Sudarshan. A life without love was more terrible to a woman than a barren desert. Her heart felt ready to burst with fear, sorrow and hopelessness.

The picnic was a total failure. The feast was finished somehow and everyone went back home, as early as possible on the pretext of Suparnā's illness. The real state of affairs was known only to two persons. Amitā guessed part of the truth, but she too kept silent about it. So to her friends she said, "Su is so delicate. Even this heat has proved too much for her. How she will bear the strenuous life of a doctor, passes my comprehension."

Perhaps Gargee and Indu too understood the truth, but they remained silent.

As Sudarshan saw them off, he said, "Please forgive me. I wanted to give you joy, but have succeeded only in causing you trouble."

The person to whom he spoke really lay half-fainting in a corner of the car. She looked at him once, but Sudarshan could not understand what her looks conveyed.

XVI

As soon as Suparnā reached home, she went up to her own room. She wanted to hide herself somewhere. "Go, my dear, and lie down," said Taran Babu. "I cannot understand why you fell so ill suddenly."

Amitā followed Suparnā into her room and began to assist her in making up the bed and changing her dress. The sight of Suparnā's face had made even this talkative girl silent. She could not understand what could have happened within these few hours. But Suparnā was looking dazed, so helpless, as if the earth beneath her feet was giving way, as if she had nothing to which she could hold fast. Amitā knew Sudarshan from her childhood. She could not believe that he could do any wrong. And Amitā believed, too, that he loved Suparnā with his whole heart. She did not exactly know the state of Suparnā's heart. But even if she did not love Sudarshan, she had no reason to be hurt so much. If she loved him, it would have settled matters for good to-day. Amitā was very anxious to know the truth, but she could not muster up courage enough to ask Suparnā.

She placed her hand on Suparnā's hair and asked, "Shall I brush and plait up your hair for you?"

"Yes, do," replied Suparnā in a tired voice. "And please take up these clothes from the floor and arrange them on the clothes-horse. The sight of clothing, scattered everywhere, makes me feel very uneasy."

"You would keep your fastidiousness even at the hour of your death," said Amitā. "Let me bring my French comb. It soothes the head very much, when you comb your hair with it."

Digitized by Arya Samaj Foundation Chennai and eGangotri

As soon as Amitā had gone out, Suparnā got up and began to fold up her discarded clothing neatly. The sight of untidy rooms really upset her very much. She was feeling very weak, yet she knew that she would not be able to sleep in the present excited state of her brain. She wanted to keep her mind engaged somehow, she was afraid to think any more. Her brain was feeling benumbed yet excited at the same time. Amitā had thrown Suparnā's blouse and scarf on a table. As she took up the scarf in her hand, Suparnā felt about to suffocate with suppressed emotion. It still held the dear touch. She stood still for a minute with the flimsy thing clasped in her fingers. Then she opened her ward-robe and hid it in a corner. She would never use it again.

As she took up the blouse, something dropped on the floor. It was a letter, the servants had placed on the table. Neither Suparnā, nor Amitā had noticed it before. Suparnā picked it up and saw by the handwriting that it had come from her father. She had not heard from him for more than a week and had been feeling a bit uneasy. But such silence was not unusual with Pratulchandra. Whenever he went out of town, such delays occured. So Suparnā had not attached very great importance to it. She opened the letter and began to read.

"My dear daughter,

"I have got all your letters in time. I am very glad indeed to learn that you have obtained such brilliant results in your examination. I hope you will continue to do so in future.

"Perhaps you are feeling anxious at not hearing from me for a long time. I am well, physically, but have been much perturbed by a sudden event, so I could not write to you. I have thought much, but could not yet see my way clear. So I have decided to let you know everything. You will know what to do. I have the fullest confidence in you. A human being ought to be able to decide for oneself. Once others have played with your young life and caused disaster. I am trying my hardest to prevent a repetition of the mistake.

"About two weeks ago, Shribilas suddenly appeared at my place. It was very easy to get my address. So it was a wonder that he had not come even earlier. I heard from him that his mother was dead. He also said that he could not do his duty by you up to this, as he was too much afraid of his mother. But he had not married again in spite of repeated requests. He had recently passed the final B. L. examination and was practising as a lawyer.

"He seemed very eager to get you back. He told me repeatedly that if you consented to go to him, you would never have cause to repent it. As far as I can understand human nature, he appeared to be posing. But I might have been mistaken.

"I have not given him any answer. I have not let him know either, where and how you have been living, but he can easily procure that information from other sources. So do not be too much upset, if you see him at Delhi. He will try his hardest to get you back. But I believe you will never submit to force in any form. I have tried to train you up to be strong and independent. But the law is on his side. He may not succeed in taking you away by force, but he can cause you a good deal of annoyance. It is better to be prepared for that.

"But on the other hand, he might really have changed. If you think that he ought to have an opportunity for retrieving his past mistakes, you can easily give him that opportunity. I have no objection to that. But try to know your own heart fully before you do anything decisive. If you feel the slightest doubt, don't go to him again. It would be an insult to your womanhood.

"I hope, you won't be too much upset by this letter. Try to make up your mind calmly and dispassionately. I may go to Delhi next month. Take my blessing.

Yours affectionately,

PRATUL CHANDRA MITRA."

Suparnā felt as if her head was becoming empty. The letters began to dance before her eyes. She failed to understand their meaning. Her brain was too tired, she could not endure anything more. Suddenly she fell down on the bed in a dead faint.

When she came round again, the room was full of people. Amitā sat by her bed, fanning her. Her aunt was applying eau-de-cologne to her head. Taran Babu sat in a chair, looking very anxious.

As soon as Suparnā opened her eyes, Amitā cried out, "How did this happen, my dear? You did not seem so very unwell in the car?"

Suparnā understood that her father's letter had not yet been detected. Her past life held no sinful secret, yet Suparnā would rather have died than let anybody know about it. She wanted to forget it herself. The spectre of the past had risen again and was coming to confront her with its horrible visage. But there was no use in letting others know about it. Let Suparna's unbearable sorrow, her despair, the storm threatening her whole future, be hers alone. They would only be food for curiosity to others.

The letter lay under her, on the bed. She left it there. She took it out and put it under her pillow. "Whose letter is it?" asked Amitā.

"It is from father," replied Suparnā. Amitā did not ask anything more about it.

"Get well speedily, my dear," said Taran

...ion. "You gave all of us such a fright. Don't ...et up to-day, but have a good rest. Our doctor ...e unfortunately gone to Meerut on a call. So ...ave phoned Sudarshan."

Suparnā turned pale as death. So they were ...nging Sudarshan again to her, to show him ...w weak she was? Poor Suparnā had become ...st a plaything in the hand of fate.

Sudarshan arrived within a few minutes. He ...et Taran Babu at the foot of the stairs and ...ked, "What is the matter? Is she really ill?" ...e was really in great distress.

"I don't know what has happened to the poor ...rl," Taran Babu replied. "She fainted on ...aching home. She has regained consciousness ...w. Come with me, you must examine her ...oroughly."

Sudarshan felt ill enough to need a doctor ...mself. But he could not forget his duty as a ...edical man and followed Taran Babu into ...parnā's bedroom.

The room was a study in dazzling white. The ...ngings were white, the decorations were white. ...n a spotless white bed, lay Suparnā, looking ...e a white lotus herself. Sudarshan felt a ...rning pang of repentance. Was he guilty of ...ying to tarnish this beautiful whiteness? But ...e had no sinful thought in his heart. He had ...ly tried to offer to her the richest treasures of ...s heart. But sometimes fate causes one to ...ke one's nearest and dearest, unintentionally. ...ch a fate had befallen Sudarshan.

Amitā alone noticed that Suparnā's pale face ...shed as soon as Sudarshan entered the room. ...darshan hardly glanced at her, perhaps he was ...id to do so. "How are you now?" he asked.

"Much better," replied Suparnā. Sudarshan ...k out his stethoscope and asked again, "Did ...u ever become unwell like this, before?"

Suparnā shook her head, implying that she ...ver had.

Sudarshan took up one of Suparnā's hands ...his own, to feel her pulse. Her hand trembled ...e a frightened bird in his clasp. This surprised ...darshan very much. Suparnā had tried to ...e away from him with all her might, only ...e hours before. Then why was she so much ...ated at his touch? There is a saying that ...n the gods fail to understand the working of a ...man's heart. So, how was he, a poor mortal, ...understand it?

He examined her thoroughly. There was ...thing much wrong with her, only she appeared ...be extremely agitated and excited. He could ...t understand the meaning of this. He could ...t ask her to explain, as the room was full of ...ople. So he left the room after advising ...mplete rest for a couple of days and prescribing ...nic for her nerves. Amitā and her aunt ...ted him to stay for tea, but he made an ...use and went off. He promised to call and ...e Suparnā again the next morning.

In the years that followed Suparnā could not remember exactly what had happened during these two days. She had remained half dazed all this time. Her brain felt benumbed as after a severe shock. Her father had told her to consider everything well, but she seemed to have lost the power of thinking clearly.

At night, Amitā's aunt slept in her room. Amitā, too, came twice or thrice, during the night. Suparnā did not have any more attacks. But she could not sleep. Endless thoughts surged through her mind. She could not make up her mind about anything.

She fell asleep, exhausted, towards the small hours of the morning. The rest of the family got up, but no one disturbed her. Sudarshan arrived punctually at eight, and Amitā took him to Suparnā's room and woke her up. Taran Babu was usually too busy in the morning with his clients, to attend to anything else. Amitā's aunt, too, could not be found just then. As Sudarshan was regarded as one of the family, practically nobody stood on ceremony with him. So Amitā took him straight to Suparnā's room.

Sudarshan examined her pulse and asked, "Have you got a thermometer?"

"Yes, there is one in father's room," said Amitā, "I shall get it for you."

As soon as Amitā had gone out, Sudarshan looked deep into Suparnā's eyes, his own eyes full of burning love. Tears sprang into her eyes. She turned away her face in great haste.

"Perhaps I was wrong in letting you know my heart," Sudarshan said, "but I never expected the result to be like this. Please forgive me Suparnā. You cannot know how I suffer for having caused you suffering."

Suparnā turned towards him again and said, "I have nothing to forgive. It is not you but God, who has caused me this suffering." Amitā came back at this moment, preventing her from saying anything more.

There was a slight rise of temperature. Sudarshan told them to continue yesterday's treatment and left. He knew that his presence caused Suparnā to feel very much agitated. So he told Amitā, "There is no reason to be anxious about her. But if her temperature rises again, send for me. Otherwise, if I come continually, it will only serve to make her more nervous. She will begin to think that she is really ill."

Suparnā's temperature did not rise again. So Sudarshan did not come any more.

Amitā tried to cross-question Suparnā, in order to get the truth out of her, but Suparnā remained obstinately silent.

Amitā's aunt was returning to Calcutta. Her home could not spare her any longer. Suparnā suddenly said, "I shall go with her. I want to stay with father for a few days."

Taran Babu was a bit surprised, but he raised no objection. He thought it natural on the girl's part to be with her father, as she was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

feeling unwell. "All right, my dear," he said, "Go and spend a few days with your father. But don't absent yourself needlessly from your college."

Suparnā began to pack up. "Goodness!" cried out Amitā "How long do you propose to stay that you are taking two trunkloads of clothing?"

"Who knows!" answered Suparnā. "I might be late in returning. It is better to be prepared."

"We are going to be left alone," said Taran Babu. "Even Sudarshan is leaving us."

"Where is he going?" asked Amitā, eagerly.

"He is going to Mysore,' he replied. "He has got a fine job there. There are very good prospects."

(*To be continued.*)

POSSIBILITY OF PRODUCING DATES IN INDIA

By J. N. BOSE, F. R. G. S.

THE date is the fruit of a species of palm, *Phoenix dactylifera*, a tree which ranges from about 15° to 40° north latitude, from the Atlantic coast of Africa to the western portion of India. It has been cultivated and much prized throughout most of these regions from the remotest antiquity. Its cultivation and use are described on the mural tablets of the ancient Assyrians. In Asia it goes back to pre-historic times. Both Arrian and Strabo mention the palm trees and dates on the Indian frontier as the principal food of the inhabitants when Alexander the Great marched through the country in 326 B. C. and it was by obtaining a large supply of dates that the remnant of Alexander's army was saved from destruction for want of food.

The date palm matures its fruit only in a rainless land of intense prolonged heat, rain preventing fertilization of the flowers and the ripening of the fruit. On the other hand, the roots require to be liberally supplied with water so that the habitat of the tree is limited to irrigable dry belt in tropics. The tree was introduced by the Moors along the Mediterranean shores of Europe, but as its fruit did not ripen so far north for a long time, the European plants were only used for garden ornamentation.* But now the trees in Southern Spain are yielding fruits.† Date was also introduced in the new world by early Spanish missionaries, but without success. Its cultivation is now extending gradually in the dry districts of the south-western portion of the United States and Mexico.§ The cause of yielding fruits is probably due to these areas being desiccated gradually.

The dried fruit, as is usually found in the market, contains more than half its weight of sugar, about 6 per cent of albumen and 12 per cent of gummy matter. The fruit varies much in size, colour and quantity under cultivation. It is an article of food alike pleasant and healthy. It is the staple food of millions of men and animals living on an area of about 1/20th of the land surface of our earth.

All dates belong to the species *Phoenix dactylifera*, and varieties have not been distinguished by Botanists, but it is well known how nicer to the palate some kinds are than others. Date palms grow all over India. These are called *Phoenix Sylvestris* or wild dates. Being not cultivated properly, they are tapped for juice which when fermented produce Toddy—a cheap country liquor. In some localities, as in Bengal, the date juice is also boiled to produce molasses and sugar. The fruits from these wild dates are not taken, consisting mostly of stones and skins only.

The largest single area of date cultivation in the world is probably in 'Iraq' along both banks of Shat-al-Arab for about 110 miles, and total number of palms is about 16 millions.* The quantity and value of date fruits imported into British India by sea and total export from 'Iraq' are given below.†

	Imports into India from 'Iraq'		Total export from 'Iraq'	
	Quantity	Value	Quantity	Value
	tons	Rs.	tons	Rs.
1929-30	42,660	57,86,843	129,988	1,87,63,588
1930-31	45,221	44,79,475	153,640	1,05,69,012

The above export figures represent excess of production over local consumption, because we know that date is the staple food of 'Iraq' in most of the places.

No statistics of production of dates in India is available. The Peshawar and Dera Ismail Khan districts of North-West Frontier Province produce some dates, but they are not sufficient

local consumption even. Baluchistan, how- has some records of date production. The ran and Kharran districts are famous for ; throughout Makran the staple food is and the date of Panjgur is declared even Arabs to excel that of Basra. More than lakhs of date trees are said to be in existence Makran, exporting dates worth about 5 lakhs rupees to Sind only.

Now, whatever is cultivated in Egypt, in ia, in 'Iraq' and in the country bordering Persian Gulf may be grown with success Sind and Western Rajputana, since these ntries are equally characterized by intense mmer heat, little tempered by rain, severe cold ter, a dry soil and similar geological forma- s.

The most suitable area in India for date ivation is the banks of canals controlled by yd Barrage at Sukkur constructed at an penditure of Rs. 200,000,000. There are no than 6,166 miles of these canals and channels reading over an enormous area. They will be ns of bringing over 7 million acres of ched and waste land under cultivation upon ch will be grown 2 million tons of valuable ps—wheat, barley, cotton, sugarcane, etc., worth t Rs. 275,000,000 per annum.* These ls require constant dredging at some s for their maintenance against drifted sand, h may be dispensed with if the banks are ested with date plantation. It will cause nomical flow of water in the canals checking page due to excess evaporation, temperature the surrounding land may also be turned d and further expansion of desert area may checked. Date trees are planted seven to fourteen s apart, and if on the average ten yards apart planted, in one mile along both banks of canal two rows $1760/10 \times 2 \times 2 = 704$ trees may be planted. e actual weight of fruit produced per tree is ult to estimate. The average produce of ripe t from a single tree is from two to three maunds, ough some trees yield as much as six maunds. if we consider $2\frac{1}{2}$ maunds per tree, in 1 mile 0 maunds of date are expected, and if we sider the price Rs. 5 per maund the price per e will be Rs. 8,800. But these figures are n 10th to 15th year of cultivation started. er some 20 years five times yield may be taken account owing to formation of clusters with suckers for each tree planted. Thus in 1000 es along both banks of the canal dates worth t Rs. 8,800,000 per annum may be grown success.

Baluchistan is probably the nearest and best e for selecting offsets for starting date cultiva- in Sind. As for the origin of dates in uchistan, it seems possible that offshoots of from Arabia and Euphrates valley have been introduced from time to time in Makran. There has been from times immemorial a great deal of traffic between Gwadar and other parts of Makran and Muskat and the names of some of the species of dates are probably Arabic in a more or less corrupted form.

The date tree is almost invariably raised from a selected offset. Trees also grow from seed, but the fruit is poor, and it has been noted that the fruit of a tree grown from seed does not resemble that of the parent tree. When the date tree is young it produces a number of root-suckers round the root. Out of these root-suckers three or four offsets are selected and the remainder are cut off, as they take much nourishment out of the parent tree. Once the root-suckers are removed new ones are seldom made. At the time of removal of offsets some of the root-suckers are permitted to remain attached to the parent tree, these even attain a height equal to that of the parent tree stock, gradually separate themselves further and further from the main stem, and in five or six years attain a man's height. They produce fruits like the ordinary trees and sooner than trees grown from offsets.

The offsets selected for the growth of new trees are allowed to remain with the parent tree for a period which varies from three to ten years; the more valuable the tree the shorter the time for which the offsets are allowed to remain with the parent stem, but the minimum period must be three years. The leaflets of an offset attain full size when it is only two years old. At this time however the plant is only three feet high and it is a curious fact that it seldom makes much further growth up to the time of its removal from the parent stock.

At the end of three to eight years the time comes for transplantation to the cultivator's fields. The offsets are now brought, all leaflets on the lower part of the main stem are cut off and are used for binding together the upper leaflets round the main stem, which are also cut off at a point about six inches above the top of stem. The whole of that portion of the offset which will be above the ground when planted is now wrapped in date fibre or in matting made of the palm. This protects it from the heat in summer and from the cold in winter. The offset is then put in one of the holes and rammed tight with earth. Very few of the offsets fail.

For forty days after planting water is given every alternate day. After that water is required every fourth day for a year. At the end of this time leaflets begin to grow and to appear above the wrapper of date fibre, but the wrapper is not removed until the upper end of the stem has made its appearance.

At the end of about four years the stem has grown about 2″ high and presents the appearance of a dwarf tree. From this time it begins to fruit, generally bearing 2 or 3 bunches which nearly touch the ground. By the time it is eight

* The Modern Encyclopedia for children, Carrel. p. 495.

Digitized by Arya Samaj Foundation Chennai and eGangotri

years old the tree attains a man's height, and is known as a full-grown tree.

After the first year it is given water every 7th day, as soon as its roots have penetrated into the surrounding fields, it no longer requires a special supply of water or manure, but obtains the necessary moisture and nourishment from the field on which it stands. The strength of the tree, however, and the quality and quantity of fruit depend largely on the soil and the supply of water it gets. It grows very rapidly when young, and if it gets plenty of water experts say that it will retain its youth for about 180 years. If, on the other hand, it gets little water it soon grows old, and both the quality of fruit deteriorate. A tree which has been well cared for attains a height of 80 to 100 feet and a girth of about 5 feet.

Soon after the middle of February the terminal branch or heart of green leaves begins to produce 10 or 20 brown-coloured sheaths or spathes. Those of the female tree are about 2 feet long and 4 to 6 inches wide. While those of the male tree are rather broader. The spathe is conically shaped at the bottom and wide towards the top. When the female spathe has come to maturity it cracks exactly in the middle of one side. The time has now come for impregnation. The spathe of the male tree is not allowed to open as by so doing the pollen which it contains becomes ineffective. Before opening it is detached from the stem and the *holumb* is extracted. The *holumb* consists of a central stalk containing 40 to 50 small flexible springs, along each of which grow small grains or seeds in which is contained some white powder or pollen. The springs from the *holumb* are now taken to the female tree and are inserted into the spathe which has cracked. Fertilization takes place within three days, after which the services of the male springs are no longer required.

Some trees require more twigs to effect impregnation than others. The better sorts, which produce large and heavy bunches of dates require as much as ten twigs, while for inferior sorts a single twig is sufficient. If any male spathes are ready for impregnation, the cultivators preserve the male springs by extracting them from the spathes and hanging them up in their homes away from exposure to wind and rain. Springs thus dried will last for several months, but they are not so effective as the fresh ones. In a few cases natural fertilization takes place, the pollen from the male spathe being carried by bees, or blown by the wind to the female dates. But as a rule resort is had to artificial impregnation.

The interior of the female spathe contains twelve or fifteen small yellow-coloured flexible twigs about 18 inches long and on each of these twigs appear twelve or fifteen eyelets. If the fertilization has been insufficient, or even if fertilization has not taken place, each of these eyelets, produce four grains which constitute fruit in embryo. If on the other hand full fertilization has taken place, a single date forms on each of the eyelets and no grains make their appearance.

Thus enough may be said about the possibility of plantation and production of dates as is done in Kharran and Makran districts of Baluchistan. The cost of plantation may not be regarded much considering the benefits that may be derived from protection of the banks of canals against the action of the winds.

KEY TO THE FRONTISPIECE

The Evening Lamp

There is a custom prevalent among the Hindus to illumine, at the approach of darkness, holy places, such as, temples, and altars dedicated to the Basil god. Young ladies, aglow with the light of the flickering lamp, bow down to the presiding diety in the ecstasy of prayer so that their heart's desires may be fulfilled by the latter.

INDIAN PERIODICALS

Importance of the Paharpur Finds

Bengal's contribution to the store of ...ological finds during recent years has been ...less valuable than that of Sind or Southern ...a." "RKLG" gives sufficient proofs in favour ...his statement in an illuminating article on ...e Plaques of Paharpur" in *Indian State Railway* ...zine. Part of it is quoted below:

Easily the most impressive collection among the ...s is in the department of plastic art. Though the ...orm is somewhat crude, the artists have put so ...h life into their handiwork that the Paharpur ...ques rank among the most popular presentation of ...ature in plastic relief. For it was as literature ...nnected with religion that Paharpur has, in a way, ...e an outstanding contribution to the world. The ..., though not as skilful as of Sanchi or Amravati, ... certainly excelled in mastering the difficult technique ...brief yet effective visualization of the no less ...ctive *Panchatantra* stories—which top the list of ...e Indian folk-lore.

Among the more noteworthy representations of ...e at Paharpur may be mentioned the story of the ...ng deer, "the winning of friends"—with the crow, ...se and tortoise; the mongoose and the cobra; ...e middlesome monkey—all highly instructive tales ... not a little element of humour in them.

Subjects with a religious significance also find a ...ce in Paharpur. The form of Buddha in different ...ects is often met with there. Brahma, Vishnu and ...a (the Hindu triad) also figure prominently. Semi-...e beings, plant life and spirited animal life—typical ...Bengal—have received considerable attention at the ...s' hands. Men—warriors, musicians, acrobats, ...tics and others in their characteristic pose in life ...a remarkable feature of the Paharpur representa-...ns. Most of all the above come from the first and ...ond terraces.

Among the more later finds, in the course of the ...erations, the discovery of a plinth or replica of ...e main temple takes the place of honour. It bears ...ery close resemblance to the great central pagoda— ...contains also the same number of angels. Near ...were found five *vedis* or pedestals, made of brick ...in different styles and sizes.

Paharpur evolved a rather unusual technique from ...Gupta times, commencing with the fifth century ...extending through Brahmin (Hindu) and Mahayana ...ddhist) influences down to the tenth century. For ...e inexplicable reason, no parallel of it seems to ...e been developed within the borders of India. ...y in certain places in Java and Cambodia can some ...arpur influence be traced. A shrine in Central Java ...ms to present a striking resemblance to the features ...e second terrace of this great Paharpur monument.

—

Architecture of Rajahmundry

Mr. Subha Rao writes of the sad fate of architecture of Rajahmundry, the ancient city of Chalukyas, in the same paper partly as follows:

Of the many ancient temples that once filled the city with beauty and splendour, not one remains to-day, all of them having been desecrated and turned into mosques at some period or other. The principal mosques or the Jumma Masjid as it is called, near the market was a Hindu temple in olden times as the sculptural designs on the front gateway strongly suggest. There is an inscription in Persian characters over the main entrance of it which places the fact beyond all doubt. Popular tradition tells us that at one time it was a temple of Vishnu under the name of Gopinatha and that it was destroyed, the officiating priests killed and a mosque built during the Muhammadan invasion, roughly six hundred years ago. It is said on the night of the brutal attack on the temple the remaining priests ran away with the deity, and installed it on the bank of the river and subsequently raised a small edifice which was afterwards enlarged and rebuilt. The abandoned temple had thus become converted into the mosques which can be seen today. The old sculptured stone gateway or the *simhadvara* is still there, but only with some of its beautiful human figures and other sculptural devices carefully defaced and mutilated so as to destroy every sign or trace of its Hindu or Brahmanical appearance. The tradition relating to the desecration of the Hindu temple seems to be true for it is said in the Persian inscription referred to above that it was built as the 'temple of God.' There is another mosque situated to the south of the 'Fort Gate' near the Godavari Railway Station as it is called even to this day, which has still traces of a Hindu temple dedicated to Siva. The architectural and sculptural designs as well as the existence of a *linga*, the emblem of Siva in the enclosure, on the top of the tomb are strong evidences of the fact of its having been once a Hindu temple. A third mosque is in the Kazi's street (also called Dada Saheb street), but unlike the other two is in a highly ruined condition. The locality in which this mosque is situated was once the *haveli* (palace) of the Muhammadan rulers of the Rajahmundry province and the mosque in question is said to be the private mosque of the royal family. Local tradition tells us that the site covered by this mosque is the hill Kamalachala on whose top once stood the temple of *Markandeya* and that during the days of Muhammadan occupation and rule, the temple was demolished, the *linga* pulled out and a mosque erected there during the sixteenth or seventeenth century. And that later on a potter's family picked up the *linga* and placed it in their house not knowing what to do with it. The potters' successors used it as a polishing stone for their pots, and later still in the beginning of the nineteenth century the *linga* was discovered to be that of *Markandeya* temple by Gundu Sobhanadri, the then

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Zamindar of Rajahmundry, who was a pious man. In or about A. D. 1810 he got the present shrine constructed on his private site and installed the *linga* in all pomp and ceremony. The mosque which is at the presant day in a ruined condition has still traces of its Hindu origin. As has been mentioned already the level of the town is rising rapidly like the level of the river bed itself. It is, therefore, possible to believe that the ancient town lies buried at least ten or fifteen feet beneath the level of the modern town, for huge massive structures in brick underneath the layers of earth when foundations for new buildings were found recently.

Some Fundamental ideas of Hinduism

Pandit Vidhusekhar Bhattacharyya, Sastri, writes in *The Calcutta Review* :

The human society is composed not only of the wise, nor only of the unwise, but of both of them alike. There are various kinds of men. They vary on account of the varying of their nature, intellect, temparament, and some other factors. Various are therefore their needs and requirements. And as such all of them cannot profitably be led along the same path. All the patients in a hospital cannot be cured with one medicine. Medicine varies according to the nature of the disease. A good teacher does not teach each one of his pupils even the same subject in the same way, but in meeting their individual needs he adopts different modes and methods. Realizing this very simple, natural and clear truth Hinduism bears all classes of members of the great human society, whether low or high, to the final goal of life, devising different means and ways, assigning thereby to its followers the greatest possible freedom of thought. Thus it does not leave anyone but, keeps all in unity in an atmosphere of unique tolerance. Here you can worship the Supreme Being as one without any form whatsoever, or as one with a form or forms in accordance with your liking or reasons. You may even deny Him altogether, if it pleases you. Yet Hinduism will show you a path by which you can reach your destination, which is, in fact, the one and the same. It teaches that truth is one but paths to reach it are many. We can only say that we require light, but we cannot say that all of us shall have a particular kind of light. In accordance with our circumstances some of us may have an electric lamp or a gas lamp, or an oil lamp, or any other lamp, that has been so far invented or may be invented afterwards. But in inventing and choosing it we must guard ourselves against dangers that may befall us. Here we apply our own discretion and in this lies the freedom of thought that leads us higher and higher.

Indeed, in Hinduism there are some ways which are direct and straight while others are indirect or curved, yet ultimately they all lead to the same destination. It depends upon you to ascertain which of them will suit you according to the circumstances under which you live. One of our great seers says :

"Different are the systems such as the Vedas, the Sankhya, the Yoga, Saivism and Vaishnavism, all advocating that this or that is excellent or beneficial. Yet, it is thou, and thou alone who art to be approached by men following a straight or a curved way in accordance with their own liking, just as waters flow into the ocean."

Finally, Hinduism has a marvellous power not only of taking whatever is good from others, but also of assimilating it completely in its own way though it takes rather a long time to do so.

The Jainas and Indian Literature

In an important paper in *Indian Culture* M. Winternitz attempts a resumé of the Jaina contributions to Indian literature. Of Nitivakyamritia, a Jaina work, he writes :

A characteristic feature of the Nitivakyamrita are the short pointed sentences some of which may be proverbial sayings. Here is a small selection of such sentences :

VIII, 6f. 'There is always dearth, where the king constantly exacts taxes. When the sea is thirsty whence shall there be water in the world ?'

The king is warned IX, 4 to inflict punishments only for the welfare of the people, not for filling up his own treasure, for : 'Is that a king or a physician who looks for offences (or diseases) in men only for his own living ?'

X, 48 : *svaminadhisthito mesop simhayate*, 'When set to it by his master, even a ram will become a lion.'

X, 84 : *dipte grihe kupakhananam kidrisam*, 'When the house is burnt down, what is the use of digging a well ?'

X, 87-91 : 'They who are friends in giving intelligent advice, in money matters and in war, are helpful men. Who is not anybody's friends at eating time ? As an unlearned Brahman is not in his place at a Sraddha, so a fool not at a council. For can a blind man see ? And will the blind man, dragged on by the blind, find the even road ?

XXIV, 54f. : 'If a dog be fed ever so well, will it avoid bones and unclean food ? Even when a snake is fed with a mixture of milk and sugar, it will never give up its poison. Verily, not even after a hundred lessons the ape will give up his unsteadiness.'

XXV, 38 : 'He who eats moderately, eats much.'

XXV, 53 : 'Thinking that for the strong one everything is wholesome one should not eat poison.'

Much bloodshed would have been avoided, and the world would have been spared infinite misery, if Somadeva's wise rule had always been followed (X, 101) : *Sastradhikarino na mantradhikarinah syuh*, '*Military authorities should not be authorities in (Political) counsels.*'

Village Dramas and the Tagore Players

The following occurs in an important paper in *The Twentieth Century* :

Tagore's plays, like his poems, are lyrical in their nature, and in their presentation resemble the Greek dramas. In fact, the ancient village dramas of India and the old Greek plays have much in common; and Rabindranath's unique contribution to the dramatic art of the world lies in his reviving and re-creating them in a manner acceptable to the modern world.

His plays in English do not give any idea of the beauty of sentiment that is the characteristic quality in the original, and much of their sweetness is lost when presented on the stage in dull dialogue forms. What makes Tagore's plays most interesting are their music, songs and dances.

Tagore has not fallen a victim to the modern craze of mechanizing the stage and sacrificing art to realism, beauty to facts of nature. Tagore, like all true creative artists, does not believe that the purpose of art is "to hold the mirror up to nature," and his characters do not portray individuals but types. His

Christianity and Indian Culture

It is a happy sign that the Christians in India ... emphasizing the need of Indianizing ...istianity. Miss A. B. Van Doren, M. A., ...usses the matter in *The National Christian ...ncil Review* as follows :

In considering the return of the Christian community ... a more distinctively Indian type of culture, there ... certain difficulties which cannot be left out of ... consideration. One of these is the strength of ...nservative Indian Christian opinion. An outspoken ...an gentleman once remarked that the one person ...der to move than the conservative missionary is ... conservative Indian Christian. This section of the ...mmunity is firmly wedded to old missionary tradition ... is emphatically not open to change. The ...estion of a church without benches, of the ...glish hymns, of the adoption of Indian rather than ...stern names—of Sarojini for Violet, of Prabhudas ... Victor—fills this type of Christian with dismay. ... the younger members of a Church to carry through ... such changes against the will of the 'Elders' is ...ost impossible. Another real difficulty is found in ...ain sections, such as the Panjab, where the ...istian Church has been strengthened by considerable ...session from Islam. In such cases to which form of ...den culture will the Church turn? What effect will ...e use of Hindu types of ritual, music, and architecture ... upon the Muslim convert? In the case of the ...uisitive enquirer, will they make it harder for him to ... the Christian way? Is this the place for a ...sible synthesis between Hindu and Islamic customs, or is the Western way the only common meeting-ground for traditions so opposite? To this question, the writer of this article has no answer to offer.

On the other hand, reasons for such a return are numerous and weighty. There is a need for making the Christian religion at home in India, no longer a delicate exotic, no longer open to the taunt of being a foreign religion, no longer identified with the ruling class. Such a naturalization would help to float the Christian community out of a backwater into the main stream of national life and influence. It will make Indian Christians more acceptable to their non-Christian neighbours and friends. The writer, during a sea-voyage, once listened to a discussion among Indian fellow-passengers, in which non-Christians besought a Christian woman doctor of the old school to give up her peculiar costume, and dress as though she were still a daughter of India. 'If only you wore our dress,' they said, 'we would feel that you belonged to us, and would welcome you to our homes.' Lastly such a return would be a move not only back but forward, for it would offer the opportunity for creating a new fusion of the best cultural values of the Panjab and Travancore, of Bengal and Bombay, of all communities and traditions.

—

Art and Modern India

From aesthetic as well as commercial point of view the study of art has become a necessity. Mr. Nanalal C. Mehta, I. C. S., concludes his instructive paper on "Art and Modern India" in *Prabuddha Bharata* thus :

The language of Art is the language of humanity. It needs nothing beyond a certain amount of sensibility and life to react to aesthetic beauty No learned comments are required, for artistic creations are complete in themselves. They bring light and radiance, joy and happiness to all those who have the capacity to grasp them and to understand them. A long acquaintance with artistic creations brings a new understanding and reveals unexpected worlds of beauty even in regions where the ordinary eye finds nothing to arrest it or to impart a tinge of wistfulness. Aesthetic joy is like a mother's love, something indefinite but infinite, deep, silent and strong, disinterested and utterly selfless. It can be found and experienced even in the least promising circumstances. Its abode is not always to be sought in the palaces of the rich, for it can be found in the humblest home of our poverty-stricken countryside. It is something in the nature of an elementary urge which requires development and opportunities to come in contact with the immortal creations of the past and the monumental creations of the present.

An organized endeavour is needed to train up a whole people to rise to its native sense of aesthetic enjoyment. Art cannot be ignored or banished from the life of a nation without doing irreparable damage to its soul. It must have a place in the homes as well as in the class-rooms, in the temple as well as in the hospital, in places of amusement as well as in places of worship; for it is a thing of the spirit and no nation has yet arisen without the exaltation of the spirit. When the futility of mere literary training—of book learning—has been found to be more than a mere waste of time and opportunities, is it not time for the country to turn to something the results of which cannot for a moment be doubted?

The past splendour of India lay not in her mythical wealth, but in the imperishable monuments of her artistic and creative mood.

Are We over-educated ?

Mr. Jatindra Mohan Datta, M. SC., B. L., writes in *The Teachers' Journal* :

We often hear that there are too many graduates in Bengal ; hence all the available resources of the Government should be spent in developing primary education, especially as the figures for Literacy are too low. It is a question of policy whether primary education should be developed at the cost of the University or Collegiate education, or not ; but it is not a fact that there are too many graduates and under-graduates in Bengal.

In the following table, the proportion of students per 10,000 inhabitants in the different classes of institutions are given :

Number of students per 10,000 inhabitants.
(The figures are for the year 1930)

	In Universities & Higher Technical Schools	In General Secondary Schools	In Vocational Schools
Austria	34	78	160
Belgium	20	33	188
Czecho-Slovakia	24	64	178
Denmark	11·5	140	140
France	18	45	57
Germany	22	134	421
Holland	16	54	184
Hungary	18	...	...
Italy	12	36	51
Norway	12	90	71
Poland	16	66	68
Soviet Russia	17	25	95
Spain	19	27	...
Sweden	14	119	314
Switzerland	27	82	460
England & Wales	11	156	246
Scotland	31	316	405
Northern Ireland	11	76	190
Irish Free State	12	92	217
Canada	51	241	181
Australia	14	245	148
New Zealand	35	166	127
South Africa	38	516	164
U. S. A.	71	424	103

It will be seen that the smallest proportion of students in Universities is 11 per 10,000 and the largest proportion 71.

The corresponding figures for British India are 3·5 per 10,000 in Universities and 34 per 10,000 in the Secondary schools, and 11 per 10,000 in vocational schools of all grades.

The progress of British India during 1914 to 1930 is shown in the following table :

Proportion per 10,000

	1914	1920	1925	1930
University	2	2·5	3·5	3·5
Secondary	21	25	37	34
Primary	9	4	9	11

The Æsthetics of Gujarat

Srimati Madri Desai discusses in *Triveni* the æsthetics of Gujarat as depicted by the poets over there. She writes :

It should be observed that these poets were pre-occupied with colour. Poet Premanand for instance, remarks that the pillars of the 'mandap' were covered with various richly coloured black, yellow and white cloth like, he adds, the 'saries' of the South. He also suggests the necessity for colour harmony in architecture. He speaks of the light green of the steps, the threshold and doors in red, white walls decorated with gold arabesque, and the decorative peacocks, blue and green on the lintel of the doors

On auspicious occasions and ceremonies like the marriage and thread ceremonies, and the anointing ceremony in the worship of Krishna, the poets describe the colours of dresses and 'saries' of women. They discuss the black 'kanchuki' with saffron tassels, red and green 'saries' with golden stripes, and saffron bodices. For the 'Holi' festival, generally, pinkish and yellowish 'saries' were used. 'Red chundadies' were particularly worn for 'subhsakun' as an auspicious token.

Similarly, the different kinds of ornaments were, poet Dayaram says, worn for different occasions. Generally, the poet says that rich jewelled bangles, jewelled earrings, noserings, and necklaces of diamonds were used by the rich women for marriage ceremonies. On the occasion of ordinary festivals they used to put on ornaments of gold. In describing the Krishna and Gopi dance he refers to ornaments like 'zanzer' (bells) on the feet, 'katimekhala' (girdle) with tiny 'ghughries', 'vank', 'makut' and 'mal'. Further, these poets suggest that along with diamonds and rubies, other rich glass pieces in blue, green or saffron colours were set in the bangles or necklaces, as a variety and as a colour harmony for the gold.

Need for Co-operative Educations

Mr. V. G. Kale writes in *The Bombay Co-operative Quarterly* :

The recently published report of the Commission appointed by the South African Government to enquire into Co-operative Agricultural Credit contains a valuable chapter on the need of education in the co-operative movement. The Commission lays particular emphasis on the wide diffusion of co-operative knowledge and an adequate supply of trained leaders and managers. The Review of International Co-operation for July 1934, draws special attention to the fact that the Commission "defends the organisation of specifically Co-operative Education on the ground that educational agencies already existing are equipped mainly to supply the needs of commerce which differ in many important respects from those of co-operation." The Commission's observations regarding co-operative leaders are very instructive and deserve to be quoted here, as they are peculiarly apt and relevant to our present purpose. "It is more difficult," says the Commission, "to discover and train the required leadership in co-operative enterprise than in similiar leadership in private business because in addition to business capacity and managerial ability it is necessary for this leader in co-operation to possess an almost altruistic point of view specially in so far as personal gain is concerned. A Co-operator is not merely a person who applied and paid for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

membership. To be a real co-operator he must realise what membership entails." To create this kind of co-operative membership and leadership, is our most vital problem to-day. And only genuine co-operative members and leaders thus morally educated, can provide and sustain our movement in purity, integrity and strength.

The Co-operative Union of Canada, the National Federation of Canadian Co-operative Societies, has expressed the following views with regard to co-operative education and the duty of government towards it. "Everything possible with the limited means and facilities at its disposal, is being done by the Co-operative Union of Canada to teach Canadian citizens the principles of co-operation, and to give them guidance in the successful practice. While the fundamental principle of the co-operative movement is self-help and mutual help, and, therefore, State support and responsibility is inimical to its sound development, the State could do much to encourage the practice of Co-operation by using the educational and publicity machinery at its disposal for popularising the principles of the movement, and also by providing suitable legislation for the incorporation and regulation of cooperative societies. Several of the Provincial Governments in Canada have given definite and substantial assistance in the carrying on of co-operative education, and there are doubtless opportunities open to the Federal Government to give similar assistance."

Ideals of Moslem Education

Everyone of us, especially the Muslims, should listen to the advice of Sir Akbar Hydari regarding the ideals of Moslem education in *Educational India*. He says :

The creation of segregate and special schools and colleges for giving Islamic tone and atmosphere to education may be desirable in many cases and in certain circumstances and times but is ultimately detrimental to intercommunal harmony and national growth, nor can it overcome the difficulties with regard to Muslims who reside in rural areas. The real solution, it seems to me, is for religious education to be provided for by private individuals and associations in institutions common to all. There is need of an enlightened agency for this work, possessing a thorough knowledge of modern scientific thought and of comparative religion. But mere theology without intense spiritual feeling and experience is only a dry husk, a lifeless thing, an encumbrance. It is only where true spirituality is found that religious tolerance can really exist. The saints of all religions are at one. It is only the sinners who would like to tear each other's eyes out. There is need for a school of modern and liberal theology in Islam. In a word there is need of a religious revival. We must think of the present and the future, not merely brood over the past.

There is need for a much greater advance in education. Indian Muslims, as a whole, are backward educationally. There is enormous wastage in the primary stage in spite of there being a higher percentage of pupils than in the case of other communities in that stage. I am strongly of opinion that we should begin to discourage and must eventually make up our minds either to abolish or completely modernize, our special schools, our maktabs and madrasahs which tend to fall below the modern standard of effective mental training.

—

Economic Nationalism

Mr. Khagendra N. Sen, M. A., F. R. E. S. (Lond.), writes on the above subject in *Landholders' Journal* partly as follows :

It is difficult to say whether the rational order of the future will simply be a relapse to the old competitive system. "There are certain indications which seem to point to a conclusion of that kind. If there is no free trade yet, there are, at any rate, ever-widening areas of freer Trade. The inter-imperial economic Conference that was held at Ottawa in July, 1932 is an instance in point. It is significant that the policy of Empire Free Trade was turned down by the Conference But it lightened the incidence of restrictive tariff within the Commonwealth. The French Government also contemplates closer trade relations with its Colonies. More significant are regional trade agreements and customs unions. These are particularly advantageous to those countries whose trade with each other accounts for almost the whole of their international trade. Even bilateral treaties in respect of commodities for which mutual markets may be found are a step in the direction of freer trade. The Oslo agreement between the Scandinavian countries, the Netherlands and Belgium is an instance of a multi-lateral agreement. The trade treaties of the Uni ed Kingdom with Denmark, Sweden, Norway, Argentine, Ireland etc., are instances of bilateral agreements. The latter are very difficult to negotiate not only because of the slowness and incompleteness of such bargains but also because of the triangular nature of most of our trade. *B* may provide the best market for *A* for the export of cotton goods, but *C* may be the cheapest market for her (A) to import raw cotton from. A bargain between *A* and *B* or *A* and *C* would, therefore, be incomplete and disadvantageous to one of the parties in any case, if the subject-matter of the bargain were raw cotton and cotton goods. Regional agreements, again, are difficult because suitable regions more or less economically self-sufficient and amenable to agreement are hard to discover. Even the British Commonwealth of Nations which satisfies these two tests as proximately as any single region can has only been able, through Ottawa, to secure diversion of trade instead of a net expansion. There is, further, always the threat of rataliation by countries which lose their export trade through such agreements by shutting down its own market to the exports of the offending countries. The only advantage secured by such agreements is that they give the parties concerned, through a stabilized market, greater bargaining power in negotiating with other countries.

What is true of trade and commerce is true also of finance. Though at present there is a sharp cleavage of opinion as regards the future monetary standard, the very inter-dependence of the financial mechanism of the modern world will sooner or later make for an international agreement The "sterlingaria" may fitly be the preface to such an endeavour in the future. In fact, there is reason to believe that an international monetary agreement shall be a prelude to the restoration of healthy competitive conditions in trade and commerce rather than a sequel.

By the restoration of healthy competitive conditions,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I do not mean an uncritical return to the old *laissez faire*, but a competition based on co-operation. What form this co-operation will take, it is difficult to predict. The working of regional agreements and trade treaties, more particularly, the co-operation of Central Banks securing an international co-ordination of credit currency and investments, will have provided sufficient experience to define the nature of future co-operation and lay down its terms and conditions. One thing is clear now. National Governments will take a leading share in the future efforts for such co-operation. Trade and commerce will want it. Consumers will desire it. The necessities of the co-ordination of the economic activities of each country will require it. In other words, there must have to be national economic planning. One of the possible lines of future policy we see in the development of complementary production, such as characterized the Ottawa agreements. It will take the form of discouraging, as part of national economic policy, the less and encouraging the more efficient forms of production in each country. Thus will competition be raised to a more rational and therefore less wasteful plane. Its culmination will be international economic rationalism. Co-operation and competition will be the two sisters of the twin policy of economic rationalism and economic nationalism.

—

Safe Slimming—A Timely Caution

The following is taken from *The Oriental Watchman and Herald of Health*:

A restricted diet does not necessarily mean a monotonous or disagreeable one, but one which is low in calorific value. The following is a suggested daily menu for a woman leading a sedentary life:

Breakfast.—Grape fruit juice, prunes, slice of toast, cereal drink or skim milk, one glass.

Luncheon.—Vegetable soup, small helping beans or beetroot, lettuce and tomato salad with lemon juice.

Supper.—Omeletts or jelly, fresh asparagus, fruit salad, skim milk.

Any of the following vegetables may be taken in addition to those mentioned: Cucumber, spinach, endive, celery, mush-rooms, brussels sprouts, water-cress, cauliflower, radishes, cabbage, and onions. They should be cooked without milk or oil and served without dressing, but in salads can be eaten with cottage cheese. No fried foods should be taken and no butter or lard used in cooking. All starch foods must, of course, be cut right down to a little toasted bread and an occasional baked potato. Fluids can be taken *ad lib*, but not in the form of sweet or alcoholic beverages. If as a result of such simple restrictions the general health and efficiency begins to be imparied it is by far the best plan to go to a doctor for his advice.

With reference to exercises for reducing purposes the following have proved very effective:

Hip Reduction

1 Lying on the back flat on the floor, with palms facing down roll the body as far as possible to either side keeping the shoulders flat on the ground behind.

2. Lying on the back with hands stretched above the head and grasping the feet of a chair at shoulders width apart, raise each leg alternately to a right angle with the body, keeping the knee straight. Repeat six times for each leg.

Abdominal reduction and strengthening

1. Position as above. Breathe deeply, and lift both legs to the right angle, and slowly lower again. Three or four times will be sufficient.

2. Lying with arms raised to the vertical position at shoulders width apart, raise the body quickly to a sitting position and swing the arms down so that the fingers touch the toes. Repeat six times.

Neck reduction

Standing with the feet slightly astride and hands on the hips, swing the upper part of the body round with a circular movement, the head being moved steadily round with trunk and bent over in the direction in which the body is leaning. Repeat four times and then reverse.

General reduction

For a young person, skipping is an excellent exercise if there is no marked obesity and the heart is not strained. Walk wherever possible in preference to riding, and take plenty of deep breaths at convenient times during the day and always in the morning and evening.

FOREIGN PERIODICALS

Nature's Divine Intimacies

Poets and philosophers through all ages have sung of the influences of nature in healing the wounds of humanity and they say, many of our difficulties arise out of our dissociation from her. So, *The Inquirer* observes:

Nowadays, however, most of us know our Earth Mother only at second-hand. We read books or newspaper articles about her, or maybe listen to talks on the wireless, too brief to be instructive, but just long enough to give us a whiff of nostalgia. Were we to be more intimate with her, to know her better and trust her more devotedly, perhaps we should be less sceptical than we are. Atheism is the product of the town, not of the country. The countryman is too reverent of life, too humble in the presence of forces which he well knows he is the servant, to be intellectually arrogant or emotionally rebellious. Scepticism is the child of the laboratory, wherein Nature is studied only when she is dead, dissected, analysed, bottled up and corked. Those of us who are town-bred do not dwell familiarly enough with her to woo her subtle secrets and to suffer her wayward, evanescent moods, and so come quietly under the spell of her long, slow-swelling tides of creative power. The countryman knows full well that he must trust her deep elemental forces if he would live at all, and thus something of the quality of those forces enters his soul, purifying him, purging him of pride and human conceit, and at times exalting him with the sense of their cosmic power.

It is impossible for an alert mind and quickened spirit to reflect on the wonder and the beauty of the world without becoming sooner or later aware of its ineffable sacredness and mysterious potency. Nature, to the sensitive soul, is the Supernatural made articulate; this universe is the Eternal contracted into a span; the Infinite made intelligible to finite minds. As a dew drop may miror the sun, so may the mind of God be mirrored in the wonder, aspiration and love of the human soul.

It is in this high sense that man is fashioned in the image of God, with the power to interpret and to explore the world as the workshop and the playground created by the Eternal Spirit for the edification and the glorifying of man's soul. Through his ever deepening discoveries of the realm in which he lives he grows in dignity of spirit and awareness of his larger destiny as a child of Eternity. The world so viewed is no unworthy setting of the solemn drama of the soul; a drama divine in plan and intention, human in its actors.

Japanese Spectacles for British Eyes

The following editorial observations have been made by *The People's Tribune* regarding the ensuing visit of Manchukuo by the representatives of the Federation of British Industries:

Assurances have been given by the British Government to Mr. Quo Tai-Chi, Chinese Minister in London, that the coming visit of Federation of British Industries representatives to Manchuria is solely for the purpose of investigating business possibilities in that territory. The Minister was also told that the coming of the F.B.I. Mission should not be interpreted as implying any violation of the principle hitherto observed by Great Britain of non-recognition of "Manchukuo." That a protest should have been made by Mr. Quo Tai-Chi in connection with this latest globetrotting picnic may seem to some evidence of China's super-sensitiveness in such matters. After all, if a British business-man wishes to have a look round Manchuria and see what prospects there are of doing trade, who has any right to question him? And if one, why not two, or ten, or twenty? The more the merrier. Shipping is suffering from the general depression, and the more Missions that go running round the world seeking for trade-openings, the more the shipping companies and hotel proprietors will be pleased.

But those who have thought Mr. Quo Tai-Chi was getting unduly alarmed about the F.B.I. Mission to Manchuria, and the possibility of important politico-diplomatic reactions from this jaunt around the world, are probably not aware of what has been said by certain members of the party as to their political views and their influence in political circles. That a party of British business men should be anxious to get some new business in these dull times perfectly natural, and that they should believe there is a possibility of securing substantial orders in Manchuria is a matter perhaps upon which they will be wiser when they return to England. But the actual position is not quite so simple as this.

The Japanese Press regards the Mission as being composed of men who are (1) friendly to Japan, (2) possessing considerable influence, and (3) having close relations with the British Government. Putting all these things together, the inference is drawn that the F.B.I. Mission, while unofficial in character, has the complete sympathy and support of the British Government. And, what is more important, there is an impression in Japan that—despite official assurances to the contrary—there is more in this British business-men's trip to Manchuria than meets the eye.

Even if the Mission is only engaged in a "quest for orders," into which "politics will not be permitted to enter," it would be better to have a few friends of China in the party instead of collecting a group so exclusively friendly toward Japan as this group appears to be. However, it is just as well to know how things stand, and if there are no friends of China in the deputation selected by the Federation of British Industries to seek orders in Chinese territory which is in the illegal occupation of alien forces, we must assume that the F.B.I. is not greatly concerned about the maintenance of friendly relations with us.

A Well Advertised Mission

The Japan Weekly Chronicle also observes on the same subject:

In a somewhat heavy manner the *Times* has given its blessing to the mission of the Federation of British Industries which is on its way to Manchukuo—and perhaps other places. British industry, it says, has grown and prospered by bringing into the orbit of world trade territories which had been more or less stagnant in their economic life, promoting their development and profiting by the increase in their prosperity! This piece of ambiguity leaves it uncertain whether it is British industry which has spread into stagnant places or merely British goods. The same ambiguity persists as we go on. The field, we are told, has become more and more restricted, but "in the Far East there are still densely populated areas awaiting development by industrial enterprise." This however, seems a little clearer. "Development by industrial enterprise" cannot mean merely the purchase by a populous but stagnant country of British goods. Looked at in any logical manner it can only mean the creation of industries. In the case of most of these densely populated Far Eastern areas, unstable conditions discourage foreign co-operation. But Manchukuo is ceasing to be unstable It is rather a large assumption, however, that the land therefore lies open for British exploitation. To survey a possible market and to map out plans for establishing new industries are two very different things, but at this time of day it is necessary to know which is being done. British territories have in the past been very generally open to all sorts of exploitation; but in this age of intense nationalism and self-supply, it is doubtful whether such liberal conditions will persist even in the British Empire It is certain that Japan has not taken all the trouble that she has in Manchuria for the benefit of the Federation of British Industries The *Times* also gets a little away from a sense of reality when it talks of Manchuria as a densely populated area more or less stagnant in its economic life. But the whole point about Manchuria is that it is not a densely populated area.

—

Child Labour in India

We take the liberty of summing up here the concluding remarks of Mr. Rajani Kanta Das, Ph. D. from his article on the above subject which appeared in *International Labour Review*, and of which we have a reprint:

Owing to the large percentage of the total population in the younger age groups, the low average length of life, the extreme poverty of the masses, and the absence of compulsory elementary education, the proportion of children in the working population is larger in India than in most other countries. The number of children employed as wage earners is, however, very small, and that of children in organized industries even smaller.

Children have always helped their parents in agriculture and handicrafts in India and the majority of children no doubt do so even today. But the specific problems of child labour arose mostly with the development of modern industry. The employment of children in organized industries under adequate control has, of course, some beneficial aspects: But to be beneficial the employment of children must be properly organized and regulated, otherwise it is liable to be a danger to society and to the children themselves.

The problems to which the industrial employment of children have given rise may be considered from three distinct points of view, namely: (1) working conditions, (2) living conditions, and (3) social policy.

Increasing attention has been given in India to such main problems of working conditions as the age for admission to employment, health and safety, hours of work, wages, and workmen's compensation.

Child labour legislation aims at securing health and safety for children and providing them with all the facilities for education in the period which is most suitable to intellectual development. This object is attained by fixing a minimum age below which they may not be employed and also a maximum age up to which they may work only under certain conditions.

The final solution of the problem of the employment of young children in India depends, therefore, to a great extent on the organization of a general system of compulsory elementary education.

Hours of work have been gradually reduced in both factories and mines, and measures are under consideration for their further reduction. Health and safety arrangements are generally satisfactory in new and large undertakings, but leave very much room for improvement in small, seasonal, and unregulated factories as well as in small mines and plantations. Wages have only been dealt with by legislation in India in respect of methods of payment.

A large number of seasonal factories, however, still remain uninspected, and under the present system, a causual visit to a tea garden is made by a subordinate officer only once in two years. Moreover, the employment of large numbers of women and children on plantations, and to a lesser extent in factories and mines, would seem to make the appointment of more women inspectors desirable.

The second class of problems concerns the improvement of living conditions with a view to creating a favourable physical and social environment for the development of childhood. The main problems of living conditions are those of housing and hygiene, maternity and infancy, and home and community. At present these problems in India are left to the welfare activities of employers and private organizations, with the exception of the grant of maternity benefit, which is dealt with by legislation in two provinces. The intervention of the public authorities in these matters, which are of such great importance for the moral and material welfare both of children and of the workers generally, is one of the most urgent needs of India.

The supply of housing accommodation by employers or landlords is undesirable, as it is liable to lead to servility, exploitation, and the growth of slums. It is the duty of public and semi-public organizations to provide housing accommodation for workers in industrial centres, so that they can live without fear of eviction and on the payment of a minimum rent.

Housing improvements must of course be accompanied by the provision of proper sanitation, including modern sewerage and water supply systems. Such improvements in housing and hygiene will do much for the protection of motherhood and infancy. Nevertheless, it is also important to provide recreational and cultural facilities both for children and for adult workers, and it is only under such sanitary conditions and salutary atmosphere that the real home and community life can grow.

What is still more important is the development of a social policy with regard to children in general

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

child labour in particular. The various measures, ...ce or proposed, for the improvement of condi... of life and work in India need to be integrated ...n organic policy for promoting the well-being of ...children of India. The underlying principle of this ...y should be to secure the fullest and richest ...ible development of childhood, upon which depends ...continuous progress of society. The elements of ...s policy should be: (1) the encouragement of ...luntary and responsible parenthood; (2) the develop... of compulsory primary education; and (3) the ...tion of progressive social legislation.

Voluntary and responsible parenthood has a three-... object, namely: (1) the conscious control of ...ulation growth; (2) the securing of sound birth, ... freedom from congenital defects; and (3) the ...guarding of health during childhood.

The reduction of the birth rate is therefore essential ... the promotion of child welfare in India. In a ...try where there is a high rate of maternal mortality ... stillbirths, where about one-fifth of the children ...n alive die before reaching one year of age, and ...re a great number die before reaching manhood ... womanhood, birth-control becomes a national ...e. The initiative in the birth-control movement ... already been taken by the Indian State of Mysore, ... the Government of Madras has recently expressed ...ntention of introducing birth-control clinics. What ...eeded is the introduction of such clinics all over ... country.

The second main feature of this social policy is the ...sion of compulsory education for children, about ...sixths of whom are without educational facilities ...resent.

This general education should be accompanied by ...ational training, especially in India, which has lost ... of her once famous arts and crafts, and has ...e little progress in the technique of modern ...duction.

The last and, from the point of view of this study, ...most important phase of social policy is progres... social legislation. The object of this social policy ...o secure to all children the fullest possible oppor... for the development of their intellectual, moral ... spiritual faculties, so that when grown up they may ...me efficient workers, intelligent citizens, and res...ible men and women, for their own greater good ...well as that of society.

—

...e re-orientation of Soviet Foreign Policy

...From a place of comparitive isolation, Soviet ...ssia has been emerging to play one of the ...ost parts in the game of European and ...rld politics. Mr. Harry N. Howard gives a ...ssential outline of Soviet's foreign policy from ...s inception of the revolution to the year 1933 ...*World Unity* which is quoted below:

"There has been a steady evolution of Soviet foreign ...licy from the beginning. When the Bolshevik ...volutionaries overthrew the Provisional Government ...November, 1917 they were determined to achieve ...new political, economic and social system within ...e confines of the old tsarist empire and to carry the ...volutionary gospel to the far corners of the world. ...It was a part of the policy of revolutionary ...ialism, the answer of communism to a very hostile ...actively intervening capitalist world. Only in a communist and Soviet world could a communist and Soviet Russia live. There must be permanent revolution until a world-wide communistic new heaven and new earth had been made. Revolution did break out in Hungary and in Germany and it did frighten the peace conference then sitting at Paris, but it did not succeed on the great scale which the Bolsheviks had hoped for. In 1920 peace had been established with Esthonia, Lithuania, Latvia and Finland. By 1921 the period of war communism, civil war and intervention had come to an end, the war with Poland was concluded and treaties were signed with Poland, Austria, Turkey and Persia. Soviet Russia was entering a new phase of her development both in internal and foreign affairs. During this second period, which lasted roughly from 1921 to about 1928, the Moscow government looked toward recognition by the great powers, began the development of a system of security treaties, and cautiously sought financial and economic collaboration with the rest of the world. Representatives of Soviet Russia sat in the conferences of Genoa and Lausanne in 1922 and 1923, and suggested at Genoa that world disarmament was a prerequisite to economic recovery. At Rapallo in 1922 close relations were established with republican Germany. By 1924 the U. S. S. R. had secured the recognition of some twenty-one nations, including all the great powers except the United States. Thanks to the stabilization of both the socialistic and the capitalistic worlds, the Soviet government announced in 1927 that the two could live peacefully side by side. By that year, too, the Moscow government had concluded non-aggression treaties with Turkey, Germany, Afghanistan, Lithuania and Persia. These were continued until by 1932 they included Finland, Latvia, Esthona, Poland and France, though the latter two were not ratified. It will be noted that they included especially the countries on the borders of the lands of the Soviets. Though not invited to participate among the original signatories of the Paris Anti-War Pact of 1928, the Soviet government was the first to put the pact into effect with her neighbours, Esthonia, Latvia, Poland and Roumania through the Litvinov protocol of February 9, 1929.

With the adoption of the *Piatiletka*, or Five Year Plan, in 1928, Russian internal policy was characterized by an attempt to industrialize the country, mechanize agriculture and socialize the entire Russian economy.

The Piatiletka emphasized and deepened the tendencies of the policy of peaceful collaboration with the capitalistic world. Any disturbance in the outside world was bound to have its influence on the fulfillment of the great plan, and the Soviet government—whatever the aspirations of the Third International—did not appear to want any upheavals abroad. Walter Duranty, the Moscow correspondent of the *New York Times*, wrote on November 23, 1932: "Far from trying to foment revolution, the U. S..S. R. today is ready and eager to co-operate in any sincere attempt to combat the effects of the depression and to restore the economic order." In foreign policy therefore the Russian government continued to negotiate political and economic non-aggression pacts, urged disarmament and sought the stabilizatian of its relations with the capitalistic world. Leon Trotzky, the apostle of permanent revolution was sent into exile.

France and the War Debts

Michael F. Florinsky shows in *Political Science Quaterly* that the question of debt-repara-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tions is the most vexatious topic in the history of the world since the Great War and suggests the all-round cancellation of war obligations. He writes :

The Johnson Act and President Roosevelt's war-debt message of June 1, 1934, were followed by the failure of all European debtors—with the sole exception of Finland—to meet the instalment of June 15.

These developments are another reminder of the fact that the most vexatious question which has poisoned the political atmosphere of the world for the last fifteen years and which has, no doubt, largely contributed to the depression, has not yet been solved.

Although at the present time the whole war-debt question seems to have been relegated somewhat to the background both in the United States and in Europe, sooner or later it is bound to come up again for public discussion and a new "final" settlement. In order to obtain a sober estimate of the chances of such a settlement it might be useful to recall the course of events which led to France's default and the arguments advanced in that country against the payment of the instalment of December 15, 1932.

It is not the purpose of this article to discuss the validity of the French claims or the soundness of the French contentions. Many of the elaborate legal theories devised in Paris cannot but sirike one as preposterous. But that this frame of mind exists in France is a factor of far-reaching importance, which should not be overlooked.

It has been said that a survey of the separations and war debts problem gives one the feeling of visiting a graveyard. It is with a sense of real and deep relief that one turns from this amazing and crumbling monument of human ingenuity to the simple and clear pronouncement issued by the British Government as far back as August 1, 1922. Great Britain, whose loans to her Allies very nearly doubled what she herself had borrowed from the United States, has been an early, consistent and, unfortunately, lonely champion of the all-round cancellation of war obligations. The Balfour note, which laid down the principles of British policy on this question, closed with the following appeal, which still retains all its force: "A general settlement [of war debts and reparations] would...be of more value to mankind than any gains that could accrue even from the most successful enforcement of legal obligations."

There are no Atheists

After carefully reviewing the utterences of famous atheists and agnostics *The Catholic World* says that, rightly speaking, there are no atheists. At least no thinkers are atheists. "Free thinkers" rise to that bait more surely but it is equally axiomatic that they do not think freely. We take only one instance and that of Darwin :

In *The Unknown God* Mr. Noyes reveals and comments upon many startling passages from the works of recognized agnostics and reputed atheists in evidence of God—not merely "a god of some sort," as Lord Kelvin says, but substantially and essentially the orthodox God, the God of St. Augustine and St. Thomas Aquinas.

Take Drawin, who though himself no philosopher was the inspiration of Huxley, Spencer and a hundred other more recent evolutionistic thinkers. Darwin says of the evolutionistic process. "This grand sequence of events the mind refuses to accept as the result of blind chance. The understanding revolts from such a conclusion." None the less atheistic evolution *must* accept blind chance. The only thinkable substitute for blind chance is a Superintending Intelligence. But once an Intelligent Directing Power is admitted you have God. For as St. Thomas Aquinas says, "We see that things which lack intelligence nevertheless act for an end not fortuitously but designedly. Now whatever lacks intelligence cannot move towards an end unless it be directed by some being endowed with knowledge and intelligence. And this Being we call God." There is many a hard nut for the professed atheist to crack. And there is the first one on which he may sharpen his teeth—or more likely break them : "the understanding revolts from blind chance," very well, if not blind chance, what ? Any alternative will be as Aquinas says "What we call God." It is entertaining as well as enlightening to find Charles Darwin and Thomas Aquinas expressing the same truth, one negatively and by implication, the other positively and directly.

Darwin, as we have said and as all the world admits, was no philosopher. He was not even a logician, that is to say a close and relentless reasoner. If he had been, he would have followed his own lead. "If not blind chance, what then ?" Pursuing one "And then ?" to another "And then ?" he would have come to "What we call God." Darwin with what he thought Intellectual humility, said "Into these questions we cannot enter." But reasons like *das ewige weibtich zeibt uns hinan*, or like the gadfly it bids us, "nor sit nor stand but go." When reason urges us on it is not humble to refuse to follow. And if we follow reason we end with God. We need no theologian from the Middle Ages to return and tell us that. Socrates was no Scholastic, nor Aristotle, nor Seneca, nor Marcus Aurelius.

Twenty years after

Twenty years ago, the whole world witnessed the outbreak of a tragic catastrophe, the wounds of which we have hardly been able to heal yet, when another world war threatens us, in the near future. We all know to what extent civilization lost by that portentous lapse into barbarism, which proved the inherent rottenness of European politics. Mr. Joseph Keating in *The Month* sounds a note of warning and describes the horrors of the last war, so that a further outbreak may be averted once again :

The world drifted from crisis to crisis, each calling for an increase of armaments, and set its security on the "precarious equipoise" of rival alliances, until, in 1914, the political murder of an Austrian Arch-Duke in Serbia caused the mobilization of Russia, Germany's violation of Belgan neutrality to attack France, and Great Britain's declaration of war on behalf of Belgium. That so relatively slight a cause should have started such a cataclysm proves the inherent rottenness of the European political system which based security on individual strength and partial alliances, instead of on the automatic combination of all against any unjust aggressor.

A vivid picture of the War that ensued may be quoted from "The World's Crisis," by Mr. winston

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Churchill, a man who presents in singular combination a keen capacity for diagnosing international disease with total inability to perceive the remedy. He Writes: "All the horrors of all the ages were brought together, and not only armies, but whole populations were thrust into the midst of them....Every outrage against humanity or international law was repaid by reprisals, often on a greater scale and of longer duration. No truce or parley mitigated the strife of the armies. The wounded died between the lines: the dead mouldered into the soil. Merchant ships and neutral ships and hospital ships were sunk on the seas, and all on board left to their fate or killed as they swam. Every effort was made to starve whole populations into submission without regard to age or sex. Cities and monuments were smashed by artillery; bombs from the air were cast down indiscriminately; poison gas in many forms stifled or seared the soldiers; liquid fire was projected into their bodies; men fell from the air in flames or were smothered, often slowly, in the dark recesses of the sea."

The folly and unreliability of the old system having been thus dramatically exposed, and peace of a sort re-established at the cost of 10,000,000 lives and $30,000,000,000, it might be thought that the united wisdom of mankind would now determine to abolish the causes which lead to war, and to establish as firmly as possible the foundations of international peace.

—

The Chinese Soviet Republic

The following review-observations have been made by the *Young Ceylon* regarding the fundamental laws of the Chinese Soviet Republic:

The Chinese Soviet Republics constitute a new force in Asia. It is a great attempt to guarantee the democratic dictatorship of the proletariat and the peasantry in an Asiatic country. It is a daring experiment for Soviet China which is one sixth of China. The area of France is equal to only 88.6 per cent of the territory of Soviet China. The area of Germany is equal to 65.9 per cent, of Japan (without colonies), 4 per cent. of great Britain (without colonies), 23 per cent of this extensive Soviet-territory. The Central District of the Chinese Soviet Republic alone is twice the size of Holland and Belgium taken together. The young Chinese Republic of Soviets must be regarded as quite a sizeable, state not only in the light of these comparisons with European countries, but also when compared with whole continents.

The constitution of the Chinese Soviet is a bold document, utterly democratic, radically socialistic and designed to eliminate exploiting elements in the State. It recognizes emancipation of women and freedom of marriage and divorce, right to education and religious freedom, offers asylum to Chinese and foreign revolutionaries and guarantees equal enjoyment of political rights to all foreign toilers.

Its system of agrarian Legislation, its Red Army and its Labour code are all adapted to serve the interests of the worker and to prevent his exploitation. The economic policy of the government is so based to develop an anti-Imperialism. It nationalizes all the key positions at present in the hands of the Imperialists concessions, customs, banks, railways, shipping, mines, factories and workshops). It is impossible even to summarize the actual details of this new experiment—and *mirable dictu* everything—economic labour and social policy—is set out in the minutest detail.

—

The Saar Plebiscite

The Saar Basin had been the cause of many controversies and is still considered to be a storm centre by no less a man than Mussolini. Whether her reunion with Germany be a success or not, Hitler has opened his final campaign, on which *The Commonweal* observes:

On August 26, Chancellor Hitler formally opened the final campaign to induce residents of the Saar Basin to vote for return to Germany when the plebiscite is conducted on January 13, 1935. A gigantic assembly welcomed to Ehrenbreitenstein, across the Rhine from Coblenz, 150,000 members of the "Deutsche Front" imported from Saarbruecken and its environs for the occasion. This organization is that into which previously existing bourgeois parties in the Basin were merged during 1933. During all the years since 1919, when the Versailles Treaty "loaned" the region to France by way of compensation for the damage done to coal fields in Flanders, there was never any doubt that 99 per cent of the 800,000 inhabitants wished to live under German rule. Virtually every German government sought to induce the French to make an earlier settlement of the controversy than the one (a plebiscite in 1935) specified by the Treaty; and it is doubtless regrettable that this arrangement was not made. But now powerful opposition to reunion has manifested itself. A Left-wing alignment was able to secure from the League of Nations' promises that a vote for autonomy, subject later to revision in favour of Germany, would be possible, and that special police forces would be recruited to supervise the region during coming months. Catholic autonomists have also been very active; and in view of the circumstance that the bulk of the population is loyal to the Church the Holy See has appointed a special envoy to the Saar Basin. No doubt economic considerations will play their part in determining the outcome, since any drastic move toward *autarkie* in the Reich would emperil the market for coal. It is predicted that the vote will be very close, and considerable thought is being given by agencies close to the League to possible safeguards for minorities in case Hitler should win out. One protective measure is, of course, automatically operative—no German troops are permitted west of the Rhine. Defeat would seriously impair the prestige of the Hitler government.

—

Battle Grounds of Freedom

What Mr. William F. Anderson says of American universities can be equally applicable to ours. It is regarding the pernicious system of control of educational institutions (which are to be the "battle grounds of freedom") by the State. He says in *The Christian Century*:

The chief peril to freedom in education in our own country today lies in the relation of state legislatures to state universities. The threat to reduce appropriations, in case legislative committees find themselves in disagreement with university authorities, is an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ominous club in times like these. And the cringing manner in which university authorities often seem to feel it necessary to curry favour with political authorities pollutes the very sources of education. Sinister political ambitions and influences are frequently to be seen behind the personnel of boards of regents and trustees. At its best, education under such auspices becomes hackneyed, impersonal and morally neutral. At its worst it becomes a positive debaucher of the stamina of the future citizens who come under its influence.

Two results of this involvement of education with the political machine are to be seen in many state institutions. First, there is a lamentable failure to preserve academic freedom and tenure. Professors become hopelessly timid; consciously or unconsciously the education which they give to the watchful youngsters in their classrooms teaches that success depends on pussyfooting. And in the second place, this political phase of state university administration opens the doors wide to militaristic propaganda. The college becomes an adjunct of the war department, and its faculty and regents dare not so much as seek freedom from military dictation lest they rouse the wrath of the American Legion and kindred bodies.

—

The Indian Press

Sir James Crerar in a crowded meeting of the East India Association shows "The Logic of the Reform Proposals" in their different branches, of which we take only one from *The Asiatic Review* and present it before our readers:

It was obvious from the first that the Press would be at once the most capacious and the most formidable channel through which the heady new wine would flow.

Metcalfe abolished all Press restrictions on the ground that whatever the consequences might be, this was necessary for the spread in India of Western knowledge and civilization. The dilemma was and is one of extreme difficulty and gravity, but the record of our Indian Press legislation, with all its vacillation and incoherence, is not one which we can recall with much complacence. My own view has always been that, while we must tolerate for greater ends a great deal that is mischievous, there are definite and measurable limits to such toleration, and that a degree of control will for long continue to be necessary in India which in England, under different conditions, can safely be dispensed with.

The Press as a political organ, if we cannot assert for it so exclusive a paternity as for other indubitably native products of our soil, is an integral and characteristic part of our system. It is the Fourth Estate of our Realm, and the Freedom of the Press has been an ever more jealously guarded public prerogative since the days of "Areopagitica." We planted it in India and are ourselves largely responsible for the fruits which it has borne in that exotic soil. It would be a profound error to judge these solely by the too abundant yield of extravagance and malevolence. We may deplore that it has often grossly misrepresented our acts and our intentions, misreprentations of which some have not stopped short of incitements to crime and rebellion. We cannot complain that it has enthusiastically propagated, even though often enough with an incomplete comprehension of them, our own ideas. We cannot deny that in its better part and its calmer and wiser moods both we and India owe much to it. If we can by wise handling of the problems now before us remove or mitigate some of the present causes of distrust and hostility, I see no reason for doubt that it will be capable of playing a salutary and beneficent part under happier and more natural conditions.

—

Mongol Destiny of Manchoukuo

Mr. Owen Lattimore, editor of *Pacific Affairs* has given us a first-hand report of the situations in the Far East, extracts of which are quoted below from *Asia*:

Japan, in creating Manchoukuo, has founded a continental empire in Asia which is none the less an empire for being free of the title of Japanese sovereignty. The symbol of this empire is the Great Wall of China; for it is along the Great Wall that its destiny must be worked out. China and Russia are the natural empires of Asia; a mainland empire based on the islands of Japan can only be artificial. When the powers of the Western World succeeded at the Washington Conference of 1921 in making Japan consent to a radical cutting down of Japanese expansion in China and Manchuria, it seemed as if the future lay between China and Russia. It seemed as if these two nations must approach each other, absorbing or dividing between them the great domains of Manchuria, Mongolia and Chinese Turkistan until, along a continuous land frontier of more than three thousand miles, the greatest Asiatic nation and the greatest western nation would stand face to face and a momentous new chapter of history would be opened.

The action of Japan in 1931 shattered this mirror of history, and we do not know, when the fragments are pieced together again, what images will be reflected in them. From 1895, after defeating China, Japan had been working for a place on the mainland of Asia, but had been kept in check by the other nations of the world, which leagued together in various combinations to prevent final success. In 1931 Japan at last broke through the half-concealed, half-acknowledged cordon of restraint and made good the ambition of nearly forty years.

Since, however, the "man-made" position of Japan in Manchoukuo inevitably conflicts with the "natural" positions of China and Russia, Japan cannot halt at the present frontiers of Manchuria and declare a limit to the historical changes implicit in the creation of Manchoukuo. It is impossible to make the Great Wall the vital frontier between China and Manchoukuo only: if the Great Wall is to become once more a significant frontier, the change must apply to the whole length of the frontier. It cannot be limited simply to the eastern end.

—

The Business of Crime

Mr. Lyman V. Rutledge, after referring to the trials, recently held in Dedham, Mass, of Murton and Millen and Faber, who were convicted of murder and given death penalty, observes in *The Christian Register*:

John Dillinger held the United States at bay for months, and crime is on the increase. It is estimated that the cost of it is not less than fifteen billion dollars a year. We suffer from the extravagances of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

moral imbecility, and will never gain economic freedom until the bloody dictatorship of the underworld has been overthrown.

Much has been said about the motion picture and the public press as influences for good or evil. We had the privilege of interviewing a noted criminal recently on this point. He had stolen more than a million dollars during his amazing career. His brief comment was: "The movies are our most prolific crime breeders. The silver screen not only glorifies the criminal but teaches crime, showing how it is done, and making escape seem easy. As for yellow journalism, it is less guilty only because the printed page is less powerful than the motion picture."

Here then are two of the most powerful factors in civilization engaged in the business of promoting crime! From their point of view they are merely giving the public what it wants. The public is willing to pay for crime news. The public, too, is guilty, and the public is now paying the cost of its moral imbecility at the rate of fifteen billions a year, not to mention the economic chaos which rises like a cloud of dust in the wake of this wild stampede.

Still there are those who wonder if there is anything for the churches to do, or if there is any reason to promote religious education!

—

"Sad Englishmen in India"

Reviewing the book "Indian Patchwork" by Edward and Mary Charles, Mr. Frank C. Bancroft writes in *The Christian Century*:

For me the book solidified an impression which three years in India had only adumbrated: that the foreign rulers in that land are pretty miserable. It is nothing less than lyrical in its singing of this doleful song.

The authors, a young English academician and his wife, arrive in Central India to take charge of a college. "Indian Patchwork" is a double diary of the events and impressions which ensued. And the first recorded entry ends thus: "We've been here a hundred and fifty years; and what has it all been worth? We've never even established the legality of our tenure to the Hindu mind. Kindness has bred lies, and cruelty has bred silence. Why can't we get out? Is there no morality greater than expediency? Poor India..Poor, poor India. And we? We have meant so well."

The reader should remember that an educator is speaking, an educator who presumbly comes closer to the subject people than an army officer or a civil administrator. Hence the amazing quality of repeated passages like: "It is dirty work touching an Indian college. A 'wog' with a university degree is necessarily spiritually perverted. To a 'wog,' a knowledge of English, a knowladge of the drama, a familiarity with the abstractions of Mathematics, are all means to the end, which is deception."

One by one, frantically, Mrs. Charles tries to marshal assets to offset the terrific original liability of living in India; and one by one these assets themselves turn into wearisome liabilities. "But where are the compensations?" she wails. "Finding none, she is forced to the conclusion: "Almost everything we have imported into this country is makeshift, because we feel that it will be good enough for today, for tomorrow we shall retire."

Perhaps this is the first work by an Anglo-Indian frankly to admit, again and again, that the British tenure of India is approaching sunset. "India is heading—or ought I say drifting?—toward self-government. God knows what chaos and bloodshed will precede and follow the day when we shall drop the reins of government, but that day will come and fairly soon, I am convinced."

And the last lines are: "Meanwhiie our little ship pushes on, bearing us away further and further from that grim tragic, tawdry and pathetic country, India."

—

Russia Enters the League

Mr. H. N. Brailsford's concluding remarks regarding Soviet's Entry into the League are quoted below from *The New Republic*:

The issue that turns on Russia's entry into the League is then, one of "real politics" in the strict Bismarckian sense of that term. Russia enters in the hope that the League, which means for practical purposes the French group, will localize in the Far East the war that she expects Japan to levy against her. That limited reckoning, and not any conversion to Wilsonian liberalism, draws her to Geneva. Her calculation is probably sound, but only if the French are prepared to sink more capital in doubtfully remunerative Polish enterprises. The roots of war, as Lenin told Mr. Wilson, are economic.

—

Negroes in the South

The same paper remarks on the treatment which the Negroes in the South receive from their white neighbours:

In the Deep South, as everyone knows, Negroes are rarely allowed to vote, and certainly not in the Democratic primaries, which are usually the real elections. Plain extra-legal coercion is the device used: any Negro rash enough to consider appearing at a polling place knows he would be sure to get into serious trouble, and almost always he refrains. In the border states, however, the solution is not quite so simple. When the Texas state legislature passed a law whose effect was to bar Negroes from party primaries, the United States Supreme Court rebuked the legislators. The Democratic Party in Texas has now declared that it is a private club, in which Negroes are ineligible for membership. This view has been sustained in the local courts, although attorneys argued that the Democratic primary is in fact the election, and that the action of the party constituted disfranchisement. Now the matter will again have to go to the United States Supreme Court. In view of past precedents, it is reasonable to hope for a decision favourable to the Negroes; but in view of past history, it still seems likely that very few, if any, members of that race will be permitted in the visible future to vote in Texas no matter what the Court says.

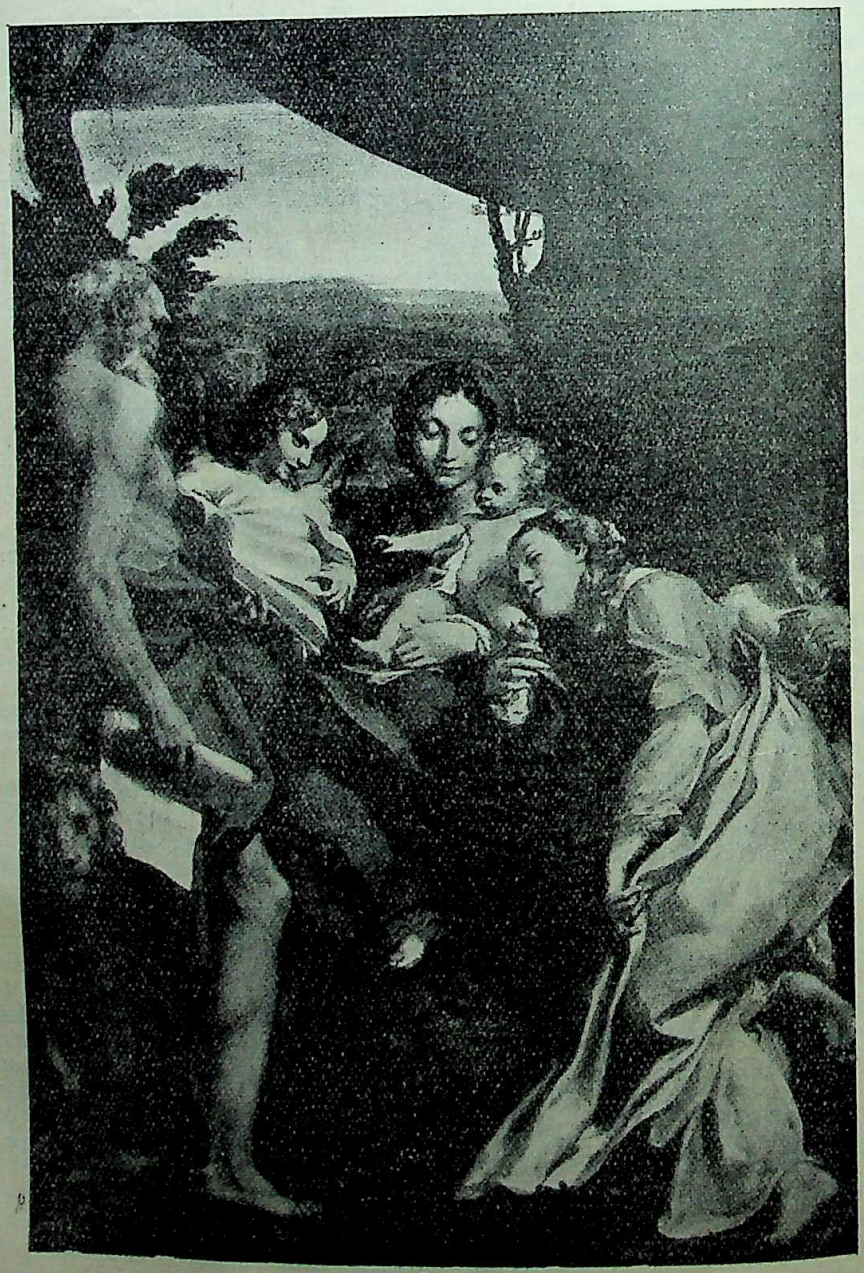
GLEANINGS

The Correggio Centenary and the Exhibition of his works at Parma

The fourth centenary of Correggio's death—his name was Antonio Allegri and Correggio was his native town—will be celebrated at Parma, the fine town in Emilia where the great painter spent most of his short life and left his best masterpieces. An exhibition of his works is being organized for next November which will undoubtedly be appreciated by all lovers of art in Italy and abroad since it will afford them the opportunity of admiring practically all his works.

Correggio is closely associated with the town of Parma, the scene of his labours, which has always been visited by artists from all over the world interested in the work of this master painter who possessed the gifts of realization to such an extent that he is considered an originator and an innovator even when compared with Leonardo and Titian. It was, therefore,



Parma—The so-called Madonna of St. Jerome by Correggio

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ost appropriate that this town should be chosen for e celebration of his fourth centenary.

Correggio's paintings scattered in various Italian and reign galleries sufficiently attest his celebrity, which, though not achieved during his brief lifetime, is now niversal. None of his paintings are equal in magnificence and beauty to the famous frescoes covering the mes of the "Cathedral," "San Giovanni Evangelista" nd the "Camera di San Paolo" at Parma. These rescoes are remarkable for the overpowering impression movement given to figures, the variety of their ttitudes and their bold foreshortening, while Correggio's technique reaches in them the highest and most odern development that characterizes Italian Painting nd his chiaroscuro, which is proverbially famous, his ffects of light and reflections and his perfect colouring scinate the beholder. Correggio's influence is still t today and evidence of this fact is afforded by the en interest and appreciation with which his works d style are still studied at present.

The monumental paintings of Correggio at Parma clude some of his masterpieces and suffice to attest s great powers.

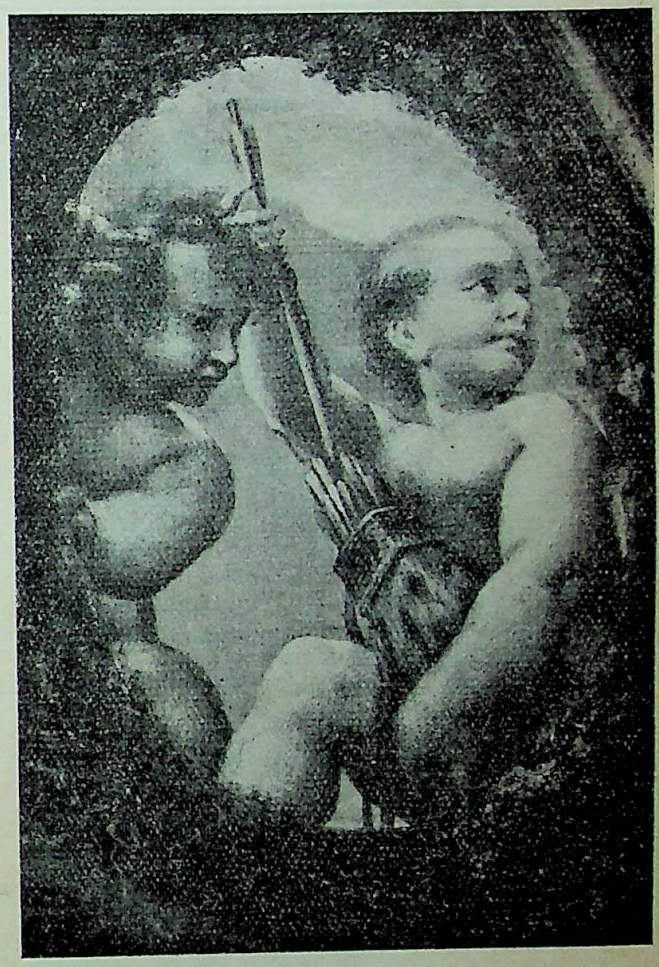
In the "Basilica of San Giovanni," besides the dmirably inspired Evangelist in a lunette over the acristy door, he frescoed the dome between the years 520 and 1524 and his wonderful composition can now e seen to the best possible advantage thanks to a pecial installation of light recently set up by the Municipality of Parma, which reveals all its beauties retofore in part hidden.

Correggio was the first painter who introduced bold nd admirably foreshortened figures in his imaginary upernatural compositions which have a most convincing ealistic character. Near the Basilica there is the dmirable and not less famous dome of the Cathedral kewise characterized by foreshortened figures and onderful chiaroscurose as well as by an abundant epth of feeling and charming gracefulness. Correggio, ho in his earlier works had portrayed the charm of fancy and later that of childhood which he immortalzed in his famous representations of "putti," here xcells in the painting of gay youth in the period of dolescence, and his figures float in a transparent tmosphere of gold seen at dawn, a short of golden-oseate mist, decidedly more superior in effect than the onochrome greys of Leonardo, the purple dusks of iorgione and the flaming reds of Titian.

One is overpowered with the vision of Correggio's rliest frescoes in the room of the Nunnery of San aolo which are of extreme beauty.

Four easel pictures complete the list of Correggio's asterpieces at Parma, namely, the "Madonna della codella" (bowl), a divine painting with marvellous gures to use the words of Vasari, the "Madonna di an Girolamo", perhaps the finest of his works, raculous in execution and colouring, the "Descent from the Cross" an indescribable expression of grief and the "Martyrdom of St. Placidus." in which tonalities are charmingly blended.

These [his masterpieces] will surely include the "Decent from the Cross" and the "Madonna and Child with Sts. Francis and Quirinus"' two of his early works with traces of Mantegna's influence, from Mantua and Modena



Parma—Particulars of a fresco by Correggio (Convent of San Paolo)

respectively the famous "Madonna" from the Uffizi Gallery whose figures recall those of Leonardo ; the "Holy Family" and the "Marriage of St. Catherine" from Naples ; the "Adoration of the Magi" and the "Nativity" from the Brera Gallery ; the "Danae" from the Borghese Gallery and many others,

Pattoki (Lahore), is the first lady to pass the B. T. examination of the Punjab University this year from the Sarswat Brahmin community. She has been appointed Head Mistress of the Arya Girl's School, Simla.

THE THIEF

BY ELIZABETH ROGERS

GANPAT stood at the door of his hut, gazing contentedly at his little field of ripe wheat and further off his larger field of *channa*, a pulse from ...ich forest tribes of Central India make ...arse flat cakes to vary their ceasless diet of ...stery rice. He was contented, because that ...ld of wheat had borne so well this year that, ...t only would it pay his land and cattle tax, ...ost due, but might even give him a few ...pees for a blanket to wrap himself in when ...e chilly night fell.

The sky, streaked with white bars of cloud, ...re promise of unsettled weather, but Ganpat knew that tomorrow's sun-shine would soon dry the crops even if a heavy shower should fall.

But as he watched his face grew troubled. Far off, spanning the valley from one range of hills to the other, he saw a barrier of cloud, a dark wall advancing towards him like an army on swift horses.

A minute later and the air shivered, then grew chill, and with a mighty roar the wind swept past. On came the monster; tearing, roaring, groaning, hurling all before it in its wrath.

Ganpat, from inside his thatched hut, groaned with the wind. One mighty shuddering blast and he and his young wife found

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

themselves looking upward at the angry heavens where his poor roof now sailed in a million straws. Against their mud wall in the lee of the wind cowered Ganpat, his wife and her old mother, bent and knotted with poverty and premature old age.

Worse followed. A crackling noise, as of a firing squad practising at the butts, came on the heels of the wind. Great hailstones, large as peanuts, struck their shelter and brought the temperature down another twenty degrees. The wretched trio huddled together for warmth and support, each with the same picture which filled the cup of their desolution.

Ten minutes, and the hurricane had passed leaving a smiling blue sky in which innocent filmy clouds floated, and the benevolent sun smiled gently as a father at the impotent raging of his infant son.

But Ganpat did not smile. Once more he stood at the door of his hut, now a wreck, and gazed at his fields. There lay the yellow wheat, a tumbled mass of straw. There stood the *channa* field, but the gathered heaps of cut *channa* were scattered to the four winds. Home wrecked, food destroyed, no means of paying his taxes! No wonder if Ganpat and his women-folk sat that night rocking dumbly over the fire of dung-cake that did its best to cheer the desolate home . . . .

The spirits of the jungle crept softy from their hiding places in the black shadowy forest. Through the valley trailed the last of the village herd, the sweet jangling of cattle bells dying away with the last rays of light as the animals reached their byres and were safely barricaded against the attack of leopard or panther. The air held all the incense of evening; from starry jasmine that made a garden of every empty water-course; from smoking village fires fresh kindled with fragrant wood; from the dust kicked up by passing cattle till the golden air grew thick with dancing atoms. At this hour "*Go-dhuli*, the hour of cow-dust," as country folk call it, all the jungle that the sun looks upon settles itself with a quiet sigh for sleep. But the jungle known only to the moon and stars stretches itself, and strange low voices sound from every side, while twin lamps of fire and emerald glow as the darkness deepens.

Far behind the cattle, away on the age of the jungle, two mis-shapen figures appeared, hurrying towards the village. As they emerged from the darkness of the trees, they could be recognized as human, yet with a weight of more than human size balanced precariously on their heads. It was Ganpat and his wife, making their way with all possible stealth and haste after a day's poaching in the forest. Time was when their old folk could go without fear into the jungle their bountiful Deity had provided for them, when they had need of wood for building or fuel. That was a golden age far away. Now other gods reigned. Ganpat made no pretence of ignorance of the forest laws. He knew that the trees and supple bamboo of the jungle were no longer his for the cutting. But what could a man do when his house so urgently needed repair: posts to strengthen the walls, bamboo and grass for thatching, and he without wheat enough to sell for the payment of his taxes? With luck they would get home and no one be the wiser or the poorer.

But as the sparks fly upward, so were Ganpat's troubles. At the entrance to the village they met the one man most feared by all Gond villagers—the forest guard, resplendent in his scarlet-bound turban. In all that wild country it was not easy to catch a thief red-handed and the guards must give an account of their stewardship as protectors of the Empire's timber.

Ganpat and the woman stood with the silence of those who have no heart to resist longer, while the guard, finding no permit nor receipt for their burden, counted the bamboo poles and assessed the value of the wood they had spent all day cutting. At the end, with their aching shoulders drooping, they continued their way between the uneven street of huts, crept into their roofless shelter and began to prepare their dish of rice over a fire that smouldered cheerlessly.

Ganpat languishes in no debtor's prison. His bullock went for rent; his cow paid the tax on her own well-worn hide. He is now a hired hand working on another man's fields to earn the daily dish of rice for himself and his household. Having nothing left but his worthless body—of which there is always a surplus in time of peace—he has escaped the fine which justice should demand of those who poach from the jungles of the Empire.

DEMOCRACY, FASCISM AND COMMUNISM —A COMPARISON OF VALUES

By Thakur HAR NARAYAN SINHA, M.A.,
Professor, Morris College, Nagpur

THE twentieth century, so far, has been an age of feverish unrest. Life seems to have been flung into a vortex of forces, which, let loose long before, ove difficult of control. There is a want of dm, that engenders a vitriolic temper ready explode at the slightest provocation. Once did, when, on the 28th June, 1914 a neteen-year-old student in Serajevo shot the strian heir-apparent, and the next moment rope was ablaze. Thus began an episode hich has not yet closed. For years Europe s been trying to prevent future war and t the embers of the last war have hardly d out. Even now Germany cherishes t war-dream in which "under the flags in Hall of Mirrors at Versailles, Bismarck's ich was born."* Her memory still fondly vers over those battle-fields of Leipzig and aterloo, of Königgrätz and Sedan, in which en of German blood found each other ain" and "before the guns of Paris and the palace of Louis XIV, the age-old eam of a German empire was fulfilled."† is not difficult to note the temper hind this talk of General Goering; but is is only a note in that dreadful mut the volume of which has been elling every moment. Other notes arise om other quarters, and all of them breathe spirit of unrest, defiance or protest against e present order of things. That is reflected r after day in the poetry, fiction and ilosophy of the age.

And yet the forces that have created this temper, are not carefully analysed and tionally controlled. It is hardly realized t the institutions that had their blossoming d fruition in the last century have oved inadequate to the needs of this century. What religion, for example, could offer a century ago is a mockery today. And Science has not been able to unmask the lights of heaven, by which religion afforded comfort to the multitude. Industrial power, either, has not brought relief; for, "despite its enormous profits it is clear that divorced from principle, the merely physical power to shape nature to our purposes is meaningless, unless power is informed by a consciousness of ends."* Science and industrial power, thus bankrupt, have joined hands with the State, of which the ideal form was democracy. Parliamentary democracy, from its nursery of England, once appeared to the world as the "way of life in which national salvation could be discovered." It "contained the secret of combining liberty with order." † It became associated in men's minds with the outstanding material progress, because "its period of consolidation was one of continuous and remarkable economic expansion." ‡ But with the dawn of this century that optimism disappeared, and the world received its rudest shock, when the democracies of the West drifted into the most terrible war ever waged in history. In a way that was inevitable; for, people still remained bewitched by the prospects of nationalism and democracy, and failed to take note of the new forces, which had in the meanwhile emerged and were operating to knit the world into a new type of economic and political unity. There had been glimmering on the horizon the faint, but nevertheless sure, outlines of a new order of things. The international incidence of economic functions—currency, tariffs, migration, foreign investment, the conditions of labour, had postulated an international

consciousness, which was driving men to think in terms of international well-being. But petty men, the autocrats and diplomats all over Europe, refused to look beyond their national frontiers. And the result was a war—a war of disillusionment. It was not merely a conflict between nations, but between ideas, the repurcussions of which have been still reverberating in all the corners of the globe. Read in this light, the perspective of events changes, and Fascism and Communism acquire a new significance in relevance to the needs of this age.

Now whatever be the rationale of Fascism and Communism, in their institutional form they are, like Democracy, a political hinterland won for science and industrial power. Their validity depends upon the degree of success that they can attain in synthesizing the forces of the age. Industrial power, nationalism and internationalism, these are the forces of the age, which by their dynamic energy are transforming the outlook of the world. It is, indeed, their interaction, which has created currents and cross-currents of thought, fear, strife, and doubt which explain the peculiar temper of the age. It may be, therefore, worth our while to examine the competence of Democracy, Fascism and Communism to promise a release from this uncomfortable frame of mind.

But the competence of Democracy, Fascism and Communism is severely conditioned by their heritage. It is the legacy of the past century; and its foundations lie as far back as the French Revolution and the Industrial Revolution. Democracy born of the first has transformed the character of "mere numbers" into self-asserting and self-conscious masses. Industrial Revolution has given birth to industrialism and capitalism. The combined genius of James Watt and Jean Jacques Rousseau has created such a stupendous force that the world has been conquered and even dazed. The story of this conquest is as grim in its details as it is distressing in its conclusion. It began with Sedan when Prussia cemented the German unity and embarked upon a scheme of industrialization under the guidance of Bismarck. Treading the same path as Great Britain she soon overtook her in all the markets of the world. Other nations followed suit and there arose the need for new markets for their expanding industries. This pointed the way for the land-grabbing operations of European nations.

> "Between 1870 and 1900 Great Britain acquired 4,754,000 square miles of territory adding to her population 88,000,000 people; between 1884 and 1900 France acquired 3,583,583 square miles and 36,553,000 people; and in these same years Germany, a bad last, gained 1,026,220 square miles and 16,687,100 people... Belgium absorbed the vast Congo territory seventy-seven times her size... Small wars abounded, wars of aggression in its most violent form, because the object of each war was conquest and, generally speaking, the total suppression of any form of national or local government in these areas absorbed".*

It was in this wise that democracy, and industrial power born of science, fell into the temptation of world-domination, and degenerated in their moral and spiritual content.

How far with this heritage can Democracy hold out promises of peace and good-will to the mankind?—that is the question. It is not enough to say that Democracy, which has certainly a pedigree at once honourable and great, has been discredited, and that Fascism, whether it be of Mussolini or of Hitler, with its technique of a corporative state, or Communism, with its "proletarian slogan" of "turning the present imperialist war into civil war" and "to unite the workers . . . . . of their respective countries . . . with the workers of all countries"† is the only way out of it. That is indicting democracy and exalting Fascism and Communism without a comparison of their values.

It is true that Jeffersonian democracy in America has reached a point of corruption that shames the very name of democracy.‡ In England the collapse of the two-party system and the emergence of a third party *viz.*, the Labour, the complexities of modern politics that "make the electoral task far harder than at any previous time, because the discovery of truth is so much harder,"§ the rise of a "new despotism",** the disparity

between universal suffrage and economic serfdom, an electorate with a type of mind, which could be taken in by the Zinoviev letter of 1924—all these are clear signs of a degenerating democracy. Indeed, a parliamentary democracy with its paraphernalia of colonies and dependencies often falls short of its ideal and resigns itself into the hands of an effective executive. It is this inadequacy that supplies the rationale to Sir Oswald Mosely and his followers. To Prof. Laski "crisis of capitalistic democracy is essentially a crisis of authority and discipline. The power to secure obedience to its principles has decreased because men increasingly refuse to accept its ends as obviously just. . . .Disrespect for authority is not due to some sudden burst of enthusiasm for anarchy, it is rooted in a disbelief in the principles for which authority has been organized in a capitalistic society." * In other words, so long as we have a Democracy based upon universal suffrage but not upon universal ownership of the means of production, there would be injustice inherent in such a system. This goes to liquidate its moral worth inasmuch as it foments class-conflict at home and militates against international well-being abroad.†

Now to meet the inadequacy of Democracy, so it is said, comes forward Fascism with its offer of the corporative state to secure class co-operation and national solidarity. It professes to quash class-conflict by superposing a system of state discipline and by assigning to each class and group its significant functions within the structure of the corporative state."‡ It seeks national solidarity and greatness by a "synthesis of all the material and non-material values of the race."§ Hence it claims to cure democracy of its diseases. But while curing democracy, it practically kills it; the remedy proves more disastrous than the disease. The Italian elections held on the 25th March, 1924, like others before, point to the same direction. For, the Fascist doctrine that society does not exist for the individual but the individual for the society resolves into a scheme of life in which the individual finds his fulfilment only by being swallowed up by the corporative state. When Parliament is considered as "the pestiferous bubo which poisons the blood of nations" and hence fifty thousand rifles are preferred to five million votes by the Founder of Fascism* it is not difficult to detect the nature of the remedy. Further, the corporative state cannot do without joining hands with capitalism. "Capitalism" says Mussolini "is scarcely at the beginning of its story. Immense tracts of Asia, Africa, even of America and Australia are still undeveloped. Capitalism, spreading from Europe, will cover the whole world. The shoulders of the Proletariat are not yet strong enough to bear the terrific burden of civilizing such areas."† This smacks of the German "Weltpolitik" of pre-War days. At any rate this attitude leaves no room for Internationalism. In a comparison of values, therefore, Fascism suffers more than Democracy.

But where Democracy and Fascism suffer, Communism claims, lies its strength. It seeks to eliminate their capitalism, which fosters class-war and anti-Internationalism. Its conception of Society is based upon the collective consciousness of the working class. It repudiates the capitalistic conception of individual liberty and rights of property. To the Communist "more real than the individual is the class—the body of persons who fulfil in the process of production at a given stage of social development a common economic function and occupy by virtue of that function a common economic status."‡ The working class thus becomes the foundation of the new order of things. For individual rights, rights of the class is substituted; and hence what is wanted is "a political instrument collectively expressing the will of the working class; and the question of individual voting seems . .quite secondary to this primary desideratum."§ Such a state stresses the complete merging of the individual in the working class; for, to

the working class accrues all rights and privileges. It appeals to the class-consciousness of a type which is considered as the finest specimen of social consciousness. This consciousness is fed by a chauvinism that idolizes 'civil war' or class war between the Proletariat and the Bourgeoisie. This war is an antidote, as Lenin said, to the imperialist war which is only another name for capitalist war. On the whole with its ideal of proletarian unity throughout the world, and its technique of class war and the collective expression of the will of the working class it holds out new hopes to mankind, which are as rosy as they are elusive. One distinctive feature of communism is that it makes a powerful appeal to the oppressed and the poor, throughout the world, and thus bids fair to seek an international affiliation, in which consists its chief strength.* But even there it is vitiated by a spirit of antagonism. Its appeal for internatiodal unity is to a class only, in order to fight and eradicate another class. Thus its international affiliations retain the narrowness of nationalism common to Fascism and Democracy, while its chauvinism is even more infectious and far-flung than the operations of their capitalism. Instead of promising a synthesis of classes, and interests of national and human welfare, it drives a wedge between them, and strives to evolve a unity, that becomes a fruitful source of jealousy, fear and quarrel.

The deficiency of Democracy, Fascism and Communism leaves the supreme problem of the age unsolved, *viz.*, how to synthesize industrial power, nationalism and internationalism. It is folly to venture a scheme of synthesis; but yet, if the study of History could be relied on, the key positions of the future seem to be held by Democracy and Science alone, by the genius of Jean Jacques Rousseau and James Watt. Each contains the real secret of uniting the human race in good-will and peace. For, Democracy is essentially based upon a belief in the unknown excellences of the common man, and Science, upon the rational faculty of man. Each has a universal affiliation, as also a universal utili y. Springing from the sacred depths of human nature they know neither Jew nor Greek, neither bond nor free. Clime or colour has hardly any meaning for them. Besides, in an "interdependent world"* the property of each people must be the property of all. So far they have remained the property of European peoples (or offshoots of European peoples outside Europe) chiefly because the credit of having discovered them belongs to the Europeans. They have so far exercised a monopoly-right over their discovery, since by these weapons they have dominated the world. But European domination of the world runs counter to the growing sense of a world-unity. This has produced terrific conflicts in the past and tends to produce more in the future. The recent tendency of the Japanese Foreign Office for a "Monroe Doctrine" regarding China and the Far East is a mild manifestation of that desire. (*Vide* the Report and Comment of *The Times*, London, of the 20th April 1934.) To eliminate, therefore, the fruitful source of conflict we have to replace a dominated world by a really interdependent world. And that could be accomplished only if Science and Democracy become the free property of the whole human race. Not till then, and never in the pretensions of Fascism and Communism, shall we find an effective remedy for the distemper of the age.

SOME ECONOMIC ASPECTS OF THE WHITE PAPER:

II. COMMERCIAL DISCRIMINATION—LEGISLATIVE

By Prof. D. N. BANERJEE,

Head of the Department of Economics and Politics, Dacca University

THE general principles upon which the proposals of His Majesty's Government for the prevention of commercial discrimination by legislation, have been based, are the same as I have stated in my previous article in connexion with the question of administrative discrimination.

The proposals occur in clauses 122 and 123 of the White Paper. They 'were intended, broadly speaking,—(*a*) to invalidate certain classes of legislation with the object of giving a general protection to all British subjects in India, whatever their domicile, against discriminatory legislation (para 122), and (*b*) by the same means to *give a more specific protection* (para 123) on a reciprocal basis to British subjects domiciled in the United Kingdom.'

The confidential Memorandum to which I have referred before, has elaborated what was intended under these clauses, and made the object of the Government more precise. I propose to examine the clauses together with the Memorandum in this article.

General Declaration as to British Subjects

It has been proposed in sub-clause (*i*) of clause 3 of the Memorandum that the Constitution Act should contain a general declaration that no British subject (Indian or otherwise) shall be disabled in British India from holding any public office by reason only of his religion, descent, caste, colour, or place of birth, nor, on the same grounds, from practising any profession, trade or calling. When the attention of the Secretary of State was drawn by Mr. Zafarulla Khan to the sweeping nature of the proposed general declaration, and, in particular, to the fact that Indians admittedly did not enjoy in British Colonies and Dominions the rights which it was proposed to confer upon their nationals in India, the Secretary of State first referred to the Charter Act of 1833, Queen Victoria's Proclamation of 1858 and the Government of India Act, and then said, among many other things, that it had been a part of British and Indian policy in India over a century not to draw any distinction in India itself between one national of the British Empire and another and that it was on that ground that he stood in making the proposal he did. He added, however, that if any Dominion passed restrictive laws or regulations against the people of India, then it would be open to India to use the powerful instrument of negotiation, namely, the refusal of the right of entry to the nationals of the Dominion. But it may be remarked here by way of comment that this power of refusing the right of entry cannot be applied to those British subjects from Dominions who have already entered India. Presumably, they are to enjoy equal rights in India with its people.

Special provision for persons who are British subjects domiciled in the United Kingdom

Sub-clause (ii) of clause 3 of the confidential Memorandum deals with the cases of British subjects domiciled in the United Kingdom in so far as they are not covered by sub-clause (i) above. It has been proposed in regard to these British subjects that (1) no laws restricting the right of entry into British India shall apply to them, except in the case of "undesirable persons": and that there shall be no statutory disabilities against them in respect of the following matters in British India, on the ground of domicile, residence, duration of residence, race, language, religion or place of birth, namely.

(a) taxation,
(b) travel and residence,
(c) the holding of property,
(d) the holding of public office, and
(e) the carrying on of any trade, business, occupation, or profession.

Special provision for companies incorporated in the United Kingdom but trading in India

As regards companies which are or may hereafter be incorporated in the United Kingdom and trading in India, it is proposed in the Memorandum [sub-clause (iii) of Clause 3], to prevent the imposition in British India of any discrimina-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tory taxation or any statutory disability upon any such company, if the incidence of that taxation or disability is based upon

(a) the place of incorporation of the Company, or

(b) the domicile, residence, duration of residence, language, race, religion, descent or place of birth of its Directors, Shareholders, or Agents, or Servants.

Mr. M. R. Jayakar raised an interesting point before the Joint Select Committee in connexion with this proposal. He asked Sir Malcolm Hailey who had been giving evidence before the Committee along with Sir Samuel Hoare, what would happen to a Company which had been incorporated in England, but which was composed mainly or entirely of Colonials coming from a country which did not give an equal treatment to Indians with its own nationals? Both Sir Malcolm Hailey and Sir Samuel Hoare admitted that there was point in what Mr. Jayakar had asked, and agreed to look into it, although they did not disguise the fact that the question raised by Mr. Jayakar was a very difficult one. There the matter stands now.

Special provision for Companies incorporated in India.

In the case of a Company which is or may hereafter be incorporated in India, British subjects domiciled in the United Kingdom will, it is proposed in Sub-clause (iv) of Clause 3 of the Memorandum, be deemed *ipso facto* to comply with any conditions which may be imposed by law on the Company in respect to the domicile, residence, duration of residence, language, race, religion, descent or place of birth of its Directors, Shareholders, Agents, or Servants. This proposal is subject, however, to special provisions in regard to bounties and subsidies to be stated later on.

The proposal itself is very complicated and perplexed even some of the members of the Joint Select Committee. The basis of this as well as of the previous proposal is the principle of reciprocity of treatment between Britain and India. "We undertake," said Sir Samuel Hoare, "that India will not take any action against a British Company that we here do not take against an Indian Company." The point of Sub-clause (iv) is, he continued, "to safeguard new Companies and to prevent the disabilities being inflicted upon new Companies that would not be legitimate in the case of old Companies."

Further explaining the meaning of Sub-clause (iv) to Sir Hari Singh Gour, the Secretary of State said, "This (Sub-) clause deals with the setting up of Companies in India. The Indian Legislature can make conditions, but if those conditions affect domicile, residence, duration of residence, and so on, *a United Kingdom Company incorporated in India would for that purpose count as an Indian Company.*" Thus 'a person domiciled in the United Kingdom shall, notwithstanding an Indian law to the effect that he shall be domiciled in India, be deemed to be domiciled in India for the purpose of this (Sub-) clause.' And 'people who have never been out to India, even for a month, under this extended provision will get all the benefits in reference to the conditions imposed on Companies, as if they had resided, been domiciled, etc., as in this Sub-clause provided.' Thus the Sub-clause would 'prevent legislation making *requirements* in the case of Companies which would act to the prejudice of the United Kingdom residents,' and the Companies will not suffer in any way as Companies if their directors, shareholders and so forth, are United Kingdom residents instead of being residents of India. The argument was that there was no discrimination in Britain against any English Company if there was any Indian associated in it or with it. The question, however, is how many Indians are so associated! Unfortunately, there are no statistics available on this point. Even if however there is no discrimination now against any Indian as such in the United Kingdom, I should be prepared to forgo that privilege as an Indian if British Companies agree not to insist upon an equality of treatment with Indians in India in respect of commercial matters.

Moreover, Sub-clause (iv) will, as the Secretary of State admitted in his reply to a question of Sir Hari Singh Gour, prevent 'the Indian Government from reserving the coastal shipping to Indian Companies domiciled in India.' And lest there should arise any misunderstanding on this point, Sub-clause (viii) of Clause 3 of the confidential Memorandum has suggested that a provision on the following lines should be inserted in the Constitution Act:

> "Without derogation from the generality of the provisions as to discrimination, ships registered in the United Kingdom shall not be subjected by law in British India to any discrimination whatsoever, either as regards the ship or her officers or crew or her passengers or cargo, to which ships registered in British India would not be subjected in the United Kingdom."

This provision is simply an elaboration of the relevant portion of Clause 123 in the White Paper, which runs as follows:

> "Provision will be made for equal treatment on a reciprocal basis of ships registered respectively in British India and the United Kingdom."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thus under Sub-clause (iv) and (viii) ships registered in India will have, as the Secretary of State himself admitted before the Joint Select Committee, no kind of preference over ships registered in the United Kingdom on the principle of reciprocity. But this principle of reciprocity is absolutely meaningless here as we shall see in other matters, since it is not possible for Indians to go to the United Kingdom in large numbers and compete with 'the very strong and powerful British shipping interests' there in the coastal traffic of the country. On the other hand it will mean in practice that Indian shipping, unable to compete successfully with "the all-powerful British shipping" in the coastal traffic of India, would never develop beyond what it is today and would probably be crushed in some places by competitive tactics pursued by the latter. Indeed, the competition between British shipping and Indian shipping in the coastal trade of this country will be as that between, to quote the words of Sir Phiroze Sethna, a giant and a dwarf. Special privileges will have to be granted to the latter if India is to develop its mercantile marine. It may be borne in mind in this connexion that if today, in spite of various adverse conditions like subsidised foreign competition, etc., the British Merchant Marine remains 'the largest and the most efficient instrument of sea transport in the world,'[1] the Navigation Acts of the English Parliament are not a little responsible for this. But under the proposals of the Government now under consideration, any kind of discrimination against British shipping in the coastal traffic of this country will be automatically *ultra vires*. Even under the existing Constitution of India it has been possible for Mr. S. N. Haji to introduce into the Legislative Assembly his Bill[2] to reserve the coastal traffic of India to Indian vessels. But it will be quite *ultra vires* for the Federal Legislature of India under its proposed new constitution to entertain any such Bill. Thus the position in this respect will be much worse under the new Constitution of India than what it is today, if the proposals of the Government are given statutory form.

1. Vide Sir Archibald Hurd's (Managing Editor of "The Shipping World") article in *Daily Mail Year Book*, 1934, pp. 39-40.

2. The Bill was introduced into the Legislative Assembly on the 9th of February, 1928. Its object was to provide for the employment of Indian tonnage in the coastal traffic of British India and of the Continent of India, with a view to the rapid development of an Indian Merchant Marine.—Vide the *Gazette of India*, Part V, February 11, 1928.

Provisions for Reciprocity

Sub-clause (v) of clause 3 of the confidential Memorandum has suggested that if any restriction, disability or condition of the kind, and based upon any of the grounds, indicated in Sub-clauses (ii), (iii) or (iv) as stated above, is imposed by any British law affecting in the United Kingdom Indian subjects of His Majesty or Companies incorporated in India, the provisions of those Sub-clauses will not apply to any Indian law imposing in British India the like restrictions, etc., based upon the same ground.

This provision for reciprocity may be of some theoretical value but not of much practical importance. The number of industrial or trading concerns *on a large scale*, owned and managed by Indians in Britain cannot be statistically known. Assuming, however, that there are a few such firms there, their number is negligible compared with that of British trading or industrial concerns in India.

In this connexion I should like to quote the following extract from the evidence of Sir Samuel Hoare given before the Joint Select Committee on November 6th, 1933:

> Sir Abdur Rahim: Secretary of State, I simply want information upon one point if you can give it to me. Are there any Indian Companies with Indian capital and directors trading in Britain?
>
> Sir Samuel Hoare: I could not say off-hand. I could find out and let Sir Abdur know.
>
> Sir Abdur Rahim: Do many Indian Companies like that have offices of their own here?
>
> Sir Samuel Hoare: There must be several; how many, I cannot say.
>
> Sir Abdur: Will you kindly let me know?
>
> Sir Samuel: If the statistics are available we will get them.

There is no further reference to this question in the concluding part of the evidence of Sir Samuel Hoare, and no statistics have presumably been supplied to Sir Abdur Rahim. On the 19th of August last, I myself wrote to the Secretary, Department of Commerce, Government of India, and also to the Director-General of Commercial Intelligence and Statistics, India, inquiring about the present number of Indian Trading and Industrial concerns, etc., in the United Kingdom. The latter has kindly written to me in reply that he regrets that he has on record no information on the points raised. There are no official statistics of such Indian concerns available, because I believe that their number and size are so negligible that the matter is not perhaps worth statistical investigation by any official agency.[2a]

2a. The Secretary to the Indian Chamber of Commerce in Great Britain has kindly informed me in a letter dated the 28th September, 1934, that there are at present,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Moreover, it would be really difficult for Indians to compete with British merchants and industrialists in the United Kingdom. There are so many obstacles in their way.

The principle of reciprocity will, therefore, for all practical purposes, work to the advantage of only one party, namely, British subjects of His Majesty and British Companies trading in India. Mr. G. L. Mehta is not perhaps wrong when he says[3] that the provision for reciprocity is a joke for which its perpetrators deserve some recognition, but certainly not to the extent of securing an unhampered right to exploit Indian resources for an unlimited period of time.

These are the reasons why I have said in my previous article that the appearance of reciprocity is delusive.

Reservation of Bills which, though not in form, are, in fact, discriminatory

Sixthly,[4] it is proposed that the Constitution Act *shall* require the Governor-General or the Governor, as the case may be, to reserve a Bill for the signification of His Majesty's pleasure if he considers the Bill *to be discriminatory in fact, although not so in form*, against any British subjects or British Companies in India. Under this proposal, the reservation of the Bill for the signification of the royal pleasure will be obligatory. Thus this provision will act as an additional safeguard for the protection of British commercial or industrial interests in India.

The provisions against discriminatory legislation as described above will be subject however to a few exceptions. I may mention below the really important ones:

> (a) The Governor-General or the Governor, as the case may be, will be permitted to discriminate in the exercise of his special responsibility for the prevention of any grave menace to the maintenance of peace and tranquillity in his sphere of action.
>
> (b) A Federal or Provincial law, which might otherwise be void on the ground of its discriminatory character, will be valid if previously declared by the Governor-General or the Governor, as the case may be, in his discretion, to be necessary in the interests of the peace and tranquillity of India or any part thereof.
>
> (c) *Exceptions in regard to bounties and subsidies.* Thirdly, it is proposed that an Act, which, with a view to the encouragement of trade or industry in British India, authorizes the payment of grants, bounties, or subsidies out of public funds, *may lawfully require*, in the case of any Company not engaged in India at the time the Bounty Act was passed in the branch of trade or industry which it is proposed to encourage, as a condition of eligibility for any such grant, bounty or subsidy,—
>
> > (i) that a Company shall be incorporated by or under the laws of British India, or
> >
> > (ii) *compliance with such conditions* as to the composition of the Board of Directors or as to the facilities to be given for the training of Indians, as may be prescribed by the Act.

This particular proposal is intended to give effect to the recommendations contained in paras 27 and 28 of the Report of the External Capital Committee, 1925. The authors of this Report, agreeing with the views of the Indian Fiscal Commission and the Indian Legislature that definite restrictions might be imposed in the case of Companies receiving bounties or similar definite pecuniary assistance, recommended as follows:

> In the case of bounties or similar definite pecuniary assistance, we consider that restrictions might be imposed of the nature described in Section 5 of the Steel Industry Protection Act of 1924, namely,—
>
> (1) in all cases facilities for the technical training of apprentices, and
>
> (2) in the case of incorporated Companies—
>
> (i) that the Companies should be registered under the Indian Companies Act of 1913 with rupee Capital, and
>
> (ii) that a reasonable proportion[5] of the directorate should be Indian.

The proposal therefore provides for a kind of permissive discrimination against a new Company which is incorporated after there has been enacted some law granting a bounty or a subsidy. Its object is, to quote the words of Lord Reading, 'to prevent Companies coming and incorporating themselves in India for the purpose of getting a bounty or subsidy.' But this provision for permissive discrimination will not apply to Companies engaged in India in the trade or industry in question at the time the Subsidy Act was passed, and they will be eligible for such grants, bounties or subsidies equally with Indian Companies. Thus in the case of bounties, etc., 'there is a distinction drawn between existing businesses in India and future businesses in India.' The dividing line between them will be the date of the Subsidy Act and until that Act is passed there can be no insistence upon the kind of conditions set out in the Memorandum. The conditions may

as far as he knows, only 42 Indian Firms trading in the United Kingdom, including 10 Importing and Exporting Firms, 5 Exporting Firms, 5 Oriental Artware Firms, 3 Restaurants, 2 Condiment Firms, 4 Pearl Brokers' Firms, 1 Carpet Firm, and 1 Tobacco Importer's Firm, etc.

3. *Equality of Trading Rights* (p. 7), a pamphlet published in 1931.

4. Sub-clause (vi) of clause 3 of the Memorandum.

5. To be determined by the Governor-General in Council.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

imposed only upon the 'post-Subsidy Act Companies'. Explaining the ground of distinction between existing Companies and future Companies the Secretary of State stated to Sir Austen Chamberlain:

> We have felt that a distinction ought to be made, for this reason, that existing Companies have been working along existing lines for many generations, and that therefore you have got to be extremely careful in altering the conditions under which they are operating.....

In this connexion the following extract from the evidence of Sir Samuel Hoare may be of some interest to the reader:

> Marquess of Salisbury: In the future, compliance with future conditions may be imposed, may it not?
> Sir Samuel: Yes, after the Subsidy Act is passed.
> Marquess of Salisbury: So that as far as bounties on future businesses are concerned, there shall be, or may be, discrimination?
> Sir Samuel: To the extent of the permissive conditions that we have laid down. *Nothing would, of course, derogate from the Governor-General's special responsibility for safeguarding the position against discrimination.*
> Marquess of Salisbury: We are speaking of legislation all the time, of course?
> Sir Samuel: We are speaking of legislation all the time, certainly.
> Marquess of Salisbury: *And under the Legislative provisions, he can always veto, if he likes?*
> Sir Samuel: Yes, *the power of veto remains.* Constitutionally also, under his special responsibilities under paragraph 18 (of the White Paper Proposals), he could intervene either in the field of legislation or the field of administration. *There is no distinction drawn between his action in the one or the other.*

Thus it is clear from the above that in case of necessity, the Governor-General or the Governor, as the case may be, will exercise the power of veto for safeguarding the interests of British commerce in India.

Dominions

Although under Sub-clause (i) of clause 3 of the Memorandum British subjects as such are to enjoy the general protection in India that 'there shall be no disability imposed upon any subject of the Crown,' yet the object of the special provisions as stated before, is 'first and foremost and simply, to protect the citizens of the United Kingdom.' And it has been specially noted in paragraph 5 of the confidential Memorandum that Sub-clause (ii) of clause 3 thereof will not apply to British subjects domiciled elsewhere in the Empire than the United Kingdom, and, in particular, will not debar the Indian Legislatures from imposing conditions upon, or restricting, the entry of such persons into India. Thus a distinction has been drawn between the British Nationals of the United Kingdom and the Nationals of the Dominions and of the other parts of the British Empire. The Secretary of State made this definitely clear in his reply to a question of Sir John Wardlaw-Milne, a member of the Joint Select Committee. He said:

> The Dominions, of course, are equally entitled with any British Nationals to the general protection against discrimination and disability. In the case, however, in which Great Britain, from the fact of its long association with India, is receiving for itself *reciprocal* treatment with India there we felt that it was a matter of negotiation between the Dominions and the Government of India as to whether they should receive the additional advantages of reciprocity or not. It is therefore for the Dominions to negotiate agreements with India either upon the lines upon which we are making this agreement or upon other lines.

Further, he said that in each case there must be a separate agreement.

This principle, which will also apply to other parts of the Empire, is in complete accord with the following recommendation of the Indian Round Table Conference made at its second session:

> It will be for the future Indian Legislature to decide whether and to what extent such rights (*i.e.*, the right to enter and trade with India) should be accorded to others than individuals resident in the United Kingdom or Companies registered there, subject of course to similar rights being accorded to residents in India and to Indian Companies.

It is not clear, however, from this recommendation how the Indian Legislature is to deal with those nationals of Dominions who have already entered India and started their businesses here. Presumably, they are, as I have already hinted, to enjoy equal rights in India with its people.

In conclusion, I should like to state that, although any kind of discrimination, either in legislation or in administration, on purely racial grounds should be avoided, the proposals of His Majesty's Government as explained above have gone too far. The specific commercial safeguards embodied in them are intended to act 'as an insurance against anything going wrong,' lest goodwill should not be forthcoming one side or the other. But if they are incorporated in the Constitution Act, they will undoubtedly retard the growth of Indian industries and Indian Commerce in this country. I mean by "Indian industries" and "Indian Commerce" industries and commerce owned and managed by Indians. As Sir Tej Bahadur Sapru and Mr. M. R. Jayakar have rightly said in their Memorandum regarding the proposed new Constitution of India, dated the 27th

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

December, 1932, for the future development of Indian Industries, many of which are struggling in an impoverished condition, it is absolutely necessary to leave in the hands of the Central and Provincial Governments enough power to initiate, subsidise, and protect industries which can be briefly described as key or infant industries, even if such initiation, subsidy, or protection should occasionally look like discrimination.' But this will not be possible under the proposals of the Government. Besides, there is the danger of non-Indian industrial enterprises being established in India behind the tariff wall which its Legislature has gradually been raising for the protection and development of its indigenous industries. After all, if we Indians have asked for protection we have done so, as Pandit Malaviya has stated in his Note of Dissent appended to the Report of the External Capital Committee, 1925, in order to promote Indian enterprises with Indian Capital and under Indian control. Further, I must say that self-government for India will be a myth if it is not to have the "power to devise and follow a national economic policy, including the right, if its interests so required it, of making economic discrimination against non-national interests." Moreover, as Mr. G. L. Mehta has aptly observed, what is fundamentally objectionable is the constitutional restriction on the inherent right of an Indian Legislature to pursue whatever economic policy it considers desirable and essential in the interest of the people of this country. Such restriction upon the legislative competence of the Parliament of a Dominion is unthinkable today.

Lastly, what is *intra vires* for the Indian Legislature now will be *ultra vires* hereafter for the Federal Legislature of India, if the proposed commercial safeguards are incorporated—as they are likely to be—in its Constitution Act.

INDIANS ABROAD

Indian Repatriates of Akra

Harrowing tales about the plight of the repatriated Indians who are at Akra, have been published in the Press from time to time. About 500 repatriated, of whom nearly 40 per cent are children,—most of whom are colonial born, are on the verge of starvation if they are not already starving. They have no ostensible means of livelihood and public charity has unfortunately expended itself five or six months ago.

Even at Akra there is ample evidence of loss of morale on the part of these countrymen of ours. The pity of it is that nearly 100 persons in this camp are on the wrong side of 60. I have myself seen an old man of about 65 actually dying attended by his aged spouse without any medical assistance or other comfort. I have examined their cooking establishments and it is terribly distressing to confess that they are subsisting on a few handfuls of rice, which they succeeded in collecting from neighbourly people.

No words can adequately describe the plight of 500 colonial Indians who are now huddled together without any ostensible means of support at Akra.

Mr. G. S. Bajpai has told the Legislative Assembly on numerous occasions that the Government are watchful of the miseries of these people and that relief measures are undertaken from time to time. I am not denying the utility of the Bajagarah scheme which supplies temporary employment to a few of these people and which to a certain extent relieves the confession at Akra, but I want emphatically to declare that these 500 'left-outs' are now in the worst condition and they may be graded into defiant action if immediate measures of relief are not undertaken.

Relieving Distress

I have before me several cuttings from the *New Daily Chronicle* of George Town, British Guiana, where this matter was taken up with considerable avidity. It is unfortunate to realize from one of the interviews given by the Hon. A. E. Sreeram, the Indian representative in the British Guiana Legislative Council, that he does not believe that these people are actually starving nor can I lend myself to believing 'that the Indian Government would be so unkindly disposed as not to exercise the same paternal care for these people.'

No doubt Sir Edward Berham, the Governor of British Guiana, has promised to consider measures for the retransplantation of these Indians at Akra back to the soil of the colony, and I have much reason to believe that, provided the Government of India readily agrees, some sort

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

speedy arrangements can be made towards relieving the distress of these people.

It was more than seven years ago that the Sahan-Lukhoo deputation came to this country from British Guiana seeking for the support of the Government of India for Indian immigrants to their country. Why does not the Government review the present situation at Akra with the gravest concern and allow these people to go back to British Guiana?

I myself had been in Malaya last year and can claim to know the conditions existing in that country. I have also inquired of the Akra repatriates about their willingness to go back to Malaya as labourers, and they with one voice assured me that they would go anywhere on any wage provided they are saved from actual starvation and slow-sinking death.

Tapping Work

I have been able to ascertain from these people as to their ability in doing tapping work in Malayan rubber estates. Quite a good few of them indicated their previous experiences in British Guiana and elsewhere of work of this kind. Everyone of them confessed eagerness to pick up this new kind of work in Malaya and to settle down there. Immigration to Malaya has been permitted since the past few weeks and the Malayan Government will pay the passage of these people provided the Government of India move forthwith and come to an agreement with the Government of Malaya on this question. The British Guiana scheme and Malaya scheme are to my mind the most important avenues for useful work being turned out today.

Less than a couple of weeks ago Babu Suklal Karmani informed the Akra inmates that they would have to break up the camp and hand over his properties to him. The matter is now in the hands of the police outpost at Maniabruz.

The repatriates sent in petitions to the effect that if they are driven out of Akra they will have to face innumerable difficulties since, being colonial-born, they are subject to social ostracism by the people in the villages. The pity of it is that nearly 96 per cent of these 500 people are Indians.

I have already seen evidence of the accommodating spirit which the police have shown towards these unfortunate individuals. The greatest calamity would be witnessed in Akra if these repatriates are evicted. I appeal to the Government of India and to the nation to take immediate steps towards a peaceful and honourable liquidating of the Akra Problem. I refuse to believe that India cannot support or find means of supply for 500 mouths.

During the past few months several developments have taken place at Akra. The following extract from a letter dated 14th September sent to me by one of these repatriates indicates the fearful position obtaining there:

> "Most respectfully I beg to write your honour the following few lines expressing, that the condition of our people is as miserable as possible. On the one hand, as is the case with the Behar earthquake sufferers, the people here in the Akra Camp are suffering from direct scarcity of food. On the other, a terrible visitation of Malaria fever has overtaken them, for the last two months. So this fatal disease has been raging here with appalling fury committing fearful devastation. At first it broke out in the west and south corners of the Akra Camp and then spread with astonishing rapidity, entering almost every house and carrying off a part of every family in the affected quarters. The same house has, in many instances, contained the dying and the dead. Short indeed is the interval between health and sickness. Only few people take the funeral to the burial ground. This is because oth rs' health is out of condition. Words are quite inadequate to describe the shock-scenes to be witnessed. In short, the place presents an aspect of woe and desolation, truly appalling. To add to the misery of the distressed, they are now forsaken by th ir friends and relatives. Many applications had been sent to the Government authorities to this effect, but up to this moment, nothing has been taken into effect.'

There is only one practical suggestion I can make. Provided generous-hearted patriots of Calcutta raise a subscription and pay for the transport of the Akra Indians from Calcutta to Madras, they might be assisted to emigrate to Malaya where there is ample scope for employment. I hope that this last appeal will not be fruitless.

COMMENTS & CRITICISM

To

The Editor, *The Modern Review*

SIR,

In the September issue of your journal while discussing Muslim representation in the services you made the following observation:

"As the British Government is desperately in need of supporters for its imperialistic policy, Muslim Indians have seized the opportunity. But why do the All-India Muslim Conference and All-India Muslim League use the words "justice and fair-play" in the resolution in which unwarranted, unjust and selfish demands relating to the service are made?"

I can't understand what else can justify an observation like this other than anti-Muslim propaganda. Justice and fair-play certainly demand the adequate representation of the Mussalmans in the services who were till recently almost shut up from employment in Government Services. The policy pursued by the British Government after the down-fall of Muslim Rule in India helped to a great extent the dumping of qualified Hindus in the service-market. "The truth is," writes Sir W. W. Hunter, "that when the country passed under our rule, the Mussalmans were the superior race, and superior not only in stoutness of heart and strength of arm, but in power of political organization, and in the science of practical Government. Yet the Muhammadans are now shut out equally from Government employ and from the higher occupations of non-official life." "The neglect and contempt with which, for half a century, the Muhammadan population of Lower Bengal has thus been treated, have left their marks deep in recent Indian literature. The former Conquerors of the East are excluded from our Oriental journals and libraries as well as from the more active careers in life. The old Courts of Directors wisely shared its favours between Mussalmans and Hindus, and the admirable Arabic and Persian scholarship displayed in the earlier series of the Bibliotheca Indica was merely the literary representative of this political impartiality. But during the last fifty years the Hindus have extruded the Muhammadans alike from State literature and State employ . . . ." (*Our Indian Mussalman* by W. W. Hunter).

The British people have gradually realized the wrongs done to the Indian Mussalmans and the Government has by reserving 25 per cent of the services for the Mussalmans shown the gesture of "justice and fair-play".

You may dub the Indian Muslim as pawns in the game of Imperialism because they refuse to be camp-followers of the Hindus. We want democracy and not Caste rule.

Yours faithfully,
Syed Jalauddin Hussain Sekandar

Calcutta, 25h September, 1934

EDITORIAL NOTE.—The writer has ascribed to us a wrong motive. Our desire is that in India, as in all other civilized countries, appointments in the public service should go to the best qualified men. That is a principle which is good for the nation and all its component communities and classes.

As for the extracts from Hunter's book, we have not cared to consider them in their context. It is maybe a fact that there was a time when Muslims could not get as many jobs in Government offices as they desired. But for that state of things, their inability to adapt themselves to the new educational requirements was responsible. Because in some previous decades they could secure only a small number of posts in the public services, for that reason there can be no justification now for reserving for them, irrespective of their comparative merit, a larger proportion of appointments in the public services than their proportion in the population, *in addition to* what they can get in open competition. A stronger case for reserving for the Hindus and other non-Muslims a much larger proportion of appointments in the public services can be made out by following our correspondent's line of argument.

Mr. S. M. Hussain, M.A., D. Phil, (Oxon), writing on 'Islamic Education in Bengal' in the *Islamic Culture* for July, 1934, says:

"With the object of turning out recruits for public service and for the legal profession, the Calcutta Madrassah was established by Warren Hastings in 1781. Muslim Law and Persian naturally formed the main course of study in it. The Madrassah splendidly fulfilled the object for which it was established and its alumni *monopolized* posts of trust and responsibility under the Government. The Mussalmans thus continued to retain their *due share* in the administration of the country and its public life." (Italics ours. Ed., *M. R.*)

If, as Dr. S. M. Hussian asserts, Mussalmans for a time "monopolized posts of trust and responsibility under the Government," non-Mussalmans may claim to be compensated for their exclusion at that time by being given the monopoly of such posts at least for a similar period!

Further the figures given in Hunter's book show that the Hindus did *not* monopolize the higher ranks of services; the Muhammadans did get a share not far removed from their population ratio, if only the Hindus and the Muhammadans are considered.

INDIA

By The Rt. Hon. GEORGE LANSBURY, P. C., M. P.

A Socialist Government will have very many difficult national questions to deal with. None of these will be more urgent or less difficult than the problem of India.

The Labour Movement is pledged to grant not self-government only, but self-determination to that great nation. One of the best pieces of work carried through by the Labour Government was setting Mahatma Gandhi free and bringing him as an honoured welcome member to the Round Table Conference. I do not object to the criti ism of those who say we have no right to claim to have kept our promises to the Indian people when (as they say) we put 50,000 Indians into prison, most of them without a trial. There is truth in that; even so, Lord Irwin and Wedgwood Benn never forgot that their main task was not coercion but conciliation. Though they did what all Governments do to maintain order, at the same time they made it clear that they considered the use of force a grim necessity, but understood that force was no remedy. Even while Gandhi and his friends were in prison they carried on negotiations under the most difficult conditions, and finally succeeded in gathering together the most representative conference of Indians ever held.

The Labour Government was driven out of office. The India Conference closed down never to be re-opened on the same representative basis. A Committee representing both Houses of Parliament, while I write this, is considering a White Paper submitted by the Government. This White Paper represents the proposals which the present Government will embody in legislation for the future government of India. I do not propose to discuss these proposals. As far as I can gather, all that is vocal and representative in India rejects the scheme as quite unsatisfactory. What sense, then, is there in discussing it?

Meantime, I am informed by all my Indian friends and by my English friends who have lately visited India that the economic condition of the masses goes from bad to worse; that millions are living lives of malnutrition and semi-starvation. The British Trades Union Movement has done splendid service, through its members on the Whitley Commission and the deputation it sent to India, in proving that apart from all questions of political change, the social conditions of the workers cry aloud for redress. George Hicks, David Grenfell, and other Labour M. P.s have impressed this side of Indian life on the Commons. No one denies the truth of this indictment. The official defence comes to no more than saying, "It might be worse."

I shall not attempt to prove that no Englishman has done any good in India. I gladly pay my tribute of homage and respect to the thousands of men and women who as civil servants, medical missionaries, and in many other ways have done their best to mitigate the ravages wrought by disease, evil customs, and starvation. Even so, in India, as in England, the charity which loving hearts bestow can never take the place of justice. The Salvation Army and other organizations spend huge sums of money here and give untiring devotion and work, striving to make life more bearable for slum dwellers. But none of us think this is any reason why slums should exist or should prevent us from doing all in our power to sweep the conditions which create slums and destitution off the face of the earth.

When we admire the hard work of those British who have tried to help the Indians, we must remember the true picture of Indian conditions. We must bear in mind the fact that every penny of wealth drawn from India to pay salaries, pensions and allowances to the multitude of British officials, soldiers, civil servants, viceroys, governors of provinces, etc., comes from a nation of 300,000,000 people, most of whom live at a standard of life which reduces vitality almost to vanishing point. Also, let us never forget that in making great reservoirs, building railway tracks and creating the New Delhi, the British

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take a very considerable toll from India in the shape of interest on loans and dividends for companies. These "benefits of British rule" are benefits paid for in hard cash, and well paid, too. This tribute is almost entirely spent outside India. I have tried to get figures to show what this total drain is, but no reliable figures are as yet available. But that a nation so rich and bountiful in the possession of natural resources should be so poverty-stricken, is a fact that should make every Englishman have the deepest suspicions.

Roman conquerors settled in their territories. They treated backward nations like ourselves very harshly, and often inflicted forced labour. But in those days the wealth wrung from the natives was largely spent in the country. Irish landlordism was one degree worse because rents were spent abroad, by landlords who never saw their estates. British and French loans to Ismail Pasha, the sometime Khedive of Egypt, were spent likewise in the haunts of gambling and vice outside that country. Britain as an Imperial power draws huge sums from India, and this is spent just as absentee landlords would spend it away from where it is earned. Much of the wealth of all of us comes to us in this way and is strictly parasitical. We shall have to be prepared to give this up, and we shall also have to leave the Indians to provide their own civil service, army and other services.

None of our fathers who conquered India went there to make her prosperous. They went for purposes of robbery with violence or—with the more civilized—as traders out to make a very large profit. Clive and Warren Hastings and all the long list of viceroys have been expected from the moment they took office to foster British prosperity. From time to time they would stop to assure the Indians that the interests of both nations are identical just as other people repeat the equally foolish phrase about the interests of capital and labour being the same. Of course, intelligent people who are intellectually honest know this is quite untrue. Not even Indian Capitalists believe it. Now that India has entered the field of Capitalism, and coal mining is in full swing, Indian Capitalists say their first need is protection by means of tariffs against British competition.

The over-riding fact which I desire to emphasize is that side by side with the political problem, there is the basic economic problem of the condition of the people, which means that a Socialist Government in power will have to face the terrific problem of how to keep millions of people alive while the future government and administration of India is being settled. We will be obliged to take on many of the financial burdens now being borne by these starving multitudes, and we shall be called upon to spend our own substance in efforts to create a new social order in villages and townships.

None of this work can be efficiently done by aliens—that is, by us. Indians may ask our help, but in the main if village life is to be restored and made of service, then the people who alone can do the job will be Indians. The terrible pity is that young India, like young Ireland during my generation, devotes so much time to politics that these conditions do not receive the attention they deserve. Indians will find, as Jawaharlal Nehru has told them, that they must turn their attention to the economic demands of the Indian masses as well as to their political needs.

What then is to be Labour's policy over here? Nothing new. We must stick to our oft-repeated statement that it is for India to decide whether she will join us as a partner, or break the connection and become a foreign power. The British governing class has received great benefits from India. The Indian Civil Service, the Native States, the Army, have all found for its sons innumerable well-paid posts and pensions. We ought to be willing to pay back some of the debt we owe. I am sure that the Socialist movement will only ask for partnership on terms of mutual aid and service to each other. We shall ask that the tie which binds us together will be one not of domination, but of brotherhood.

As to what form the Government of India should take: this must be settled by Indians themselves. There is not the least likelihood that any scheme formulated in London will ever be voluntarily accepted, and in this matter it is imperative that any scheme should be freely worked by Indians. All we have to consider is how we can best secure the drafting of such a scheme. We Socialists have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

declared that Indians must themselves choose whether to remain with us or no. How shall we settle this and the question of future government? I have come definitely to the conclusion that Annie Besant's scheme is the only way. She advocated the plan adopted in relation to Australia. Then Britain gave the Australian States the task of drawing up their Federal Constitution and merely endorsed it afterwards. Some years ago, Dr Besant and a group of representative Indians with the valuable assistance of our good friend and life-long champion of India, David Graham Pole, drew up a Commonwealth of India Bill which Harry Snell, John Scurr and myself and others introduced in the House of Commons. Our contention was that this scheme, with such minor modifications as Parliament should impose, would make a definite advance along the road to Dominion status. But the Bill never got a second reading. Now, years after; Englishmen are drafting schemes, which, as I say, and as they know, are certain of rejection. There is only one way out for a Socialist Government. We should summon or ask Indians themselves to summon a Constituent Assembly and hand over to that assembly the task of deciding the future government of India.

This is both logical and common sense. By this means we do give self-determination and self-government. There will certainly be an out-cry that "the Assembly will be captured by the extremists." Certainly Conservatives will raise that cry. But they will have far worse things to cry out about, for our own House of Commons will have been captured by "extremists"—themselves. Do not let us be frightened by noise.

More serious criticism will come from people who assure us that the racial and religious sects will never agree. This is not true. The one thing that is clear from recent history is that an outside power like ourselves never can secure harmony here. Only an Indian state stands any chance of doing so.

The main point for us is to make up our minds that we shall be prepared to leave to Indians the task of deciding with whom she will or will not federate, and the sort of federal government she will set up within her own dominions.

She might follow America and set up autonomous states, federated with the Centre; or she might choose government from the Centre. This is for them, not for us, to decide. I am certain that if those who speak for the Indian states and India under British rule are once convinced that they have free choice to remain with us or leave us, they will, on terms, desire to remain. That is of course, if we have been able to convince them that self-government means that Indians do manage Indian affairs just as Australia and Canada manage theirs.

We of the Labour Party have agreed with this, and have added the further stipulation that such membership must be the free will act of India.

Given equal status with all other Dominions, the people of India under the Statute of Westminster have the unequivocal right either to remain with us or go out. The Labour Movement in supporting the right of choice for India is only asking for her the same rights as those enjoyed by other Dominions.

The issues are already decided, and written down in official documents. All we have to do is to make up our minds to do what has been promised. The sands of time are running out. This nation of 300,000,000 people, occupying territory as large as Europe without Russia, awaits the coming to power of the Labour Party with its Socialist policy of democracy and freedom. I hope we shall be worthy of their faith and confidence. We have learned for ourselves that the true test of success in government is not the pomp and majesty of courts, armies and autocrats. The well-being of nations will be found in love and comradeship. The people of the East are awakening. We are alien in religion and race, yet we eat and drink, wake and sleep, suffer pain and sickness, poverty and crime together. We are part of each other, children of one Father.

It is our God-given opportunity to wipe away the legal and other measures which prevent India entering of her own free will into the family of nations. Let us all see that we do all that in us lies to ensure that opportunity shall not be lost because of ignorance or fear.*

* *My England* (Chapter XIII "India", pp. 168-175). By the Rt. Hon. George Lansbury, P. C., M. P. (Published by Selwyn & Blount Ltd. London. October 1934.)

LONDON LETTER :

The Political Party Conferences, The Shadow of the General Election, Conservative Conference Resolutions, The Vote on India, No fighting Lead, Mining Accidents, Miners' Hours, Miners' Wages, Slum Landlords, The Labour Conference, Peace and Disarmament, Mussolini on Disarmament

FROM MAJOR D. GRAHAM POLE

THE POLITICAL PARTY CONFERENCES

SUMMER is over, holidays are ended, and the two chief political parties in England, the Conservative Party and the Labour Party, have just been holding their annual Conferences. It is a time of general stock-taking, of affairs at home and abroad, and everyone has an ear to the ground. For we seem to be living in more than usually anxious and challenging times.

No summer, surely, has seen so many disasters. Railway and flying accidents have followed one upon the other. A terrible typhoon has devastated part of Japan. The burning of the American ship, the Morro Castle, while on a pleasure cruise, was the worst shock since the Titanic. Most tragic of all was the fire at Gresford Colliery which trapped more than two hundred miners and even killed some of their would-be rescuers.

In the world at large there seems to be very little to smile about. The Depression may be over but Unemployment remains where it was before. The Disarmament Conference is neither dead nor alive and meantime all the nations are re-arming. In Europe Fascism, that irresponsible beggar on horseback, is doing its best to ride to the devil In the Far East, Japan's imperialism has embroiled her with Russia on the Asiatic mainland and is embroiling her with America in the Pacific.

As if all this were not enough, we are on the verge of great international decisions that must be made The future of Austria has somehow to be safe-guarded. In January 1935 the fate of the Saar district will be decided by plebiscite. Sometime in 1935 there will be held a Naval Conference, and all the signs are that it will break down over the 5-5-3 ratio (which at present rules for Britain, America, and Japan) because Japan is demanding parity.

Still, the world is not quite comfortless. The cause of Peace has been strengthened in a few directions. Russia has joined the League of Nations. The King of Jugo-Slavia is trying to reconcile the Balkan States with one another. The enquiry in America into the Private Manufacture of Armaments has shed a lot of daylight on armament rices between nations, and the ways in which they are promoted by private manufacturers.

THE SHADOW OF THE GENERAL ELECTION

At the moment of writing the Party Conferences, having just concluded, are occupying most of the news. The Labour Party opened first at Southport and the Conservatives followed later at Bristol. For some reason the Labour Party always takes the inside of a week for its discussions, while the Conservatives seem to be able to do on two days !

These Conferences have been eagerly awaited for all sorts of reasons. For one thing it seems to be the universal opinion that the General Election will come next year—perhaps in the autumn, but it can hardly be postponed beyond the Spring of 1936. In such circumstances statements of policy by political leaders are no longer of utopian but of urgent interest. Indeed one unkind Liberal newspaper has just remarked of the present Government: "All the plans for the coming Parliamentary Session are to be made by the Government with an eye on the general election. It will be twelve months of window-dressing with an elaborate display of attractive 'dummies' in the front to dazzle the public."

But if the Government has some nice dummies in reserve, none of them travelled in the train with them to Bristol. This year's Conservative Conference must be amongst the dullest and most reactionary on record. We were told to wait for Mr. Baldwin's speech, were told that it would give a real fighting lead. But it didn't make any impression at all. It was about as comfortable and lacking in definition as an eiderdown. "Writing with deliberation," says Mr. A. J. Cummings who, since he reported the trial of the Vickers engineers in Moscow, has been recognized as one of the astutest of political observers, "I would

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

scribe his speech as the emptiest and most me I have ever heard from a prominent litical leader, not omitting the present Prime inister at his worst."

Conservative Conference Resolutions

The speech by the leader of the Conservative arty should have been of exceptional import- nce. For, apart from all the heraldings it had ven given in advance there were last moment asons to give it extra point. The delegates to is year's Conference had turned out to be ore than usually die-hard and unsympathetic. heir only human proposal was for a national ottery! Otherwise, they voted for increasing the ower of the House of Lords; for increasing nnaments; for compensating the slum landlord f which more later. And, having handed all ese bouquets (or boomerangs) to their own ss, they at the same time threw obstacles in e way of India's advance to freedom.

The Vote on India

It is for their vote on the Indian question at the 1934 Bristol Conference of the Conserva- ve Party will go down to history. As all the orld now knows, the Conference very nearly ave an adverse vote on the Government's India olicy. Sir Henry Page Croft, in a very bitter peech, had moved a resolution urging the overnment "to assent to no proposals which ould imperil the future of India." His speech eriously expressed the fancy of the Conserva- ve delegates; and when the Executive moved n amendment "to refrain from making a pro- ouncement until the report of the Joint Select ommittee had been received," it scraped through y the merest chance and only really by a ke. In all, the amendment was put to the onference three times. With a first show of nds, it seemed to be lost. With a second show f hands, the *Chairman* said it was carried. his led to a ballot being demanded, and only en did the amendment come out on top—with e tiny majority of 23! There voted for the mendment 543 and against it 520. But, and is is the heart of the matter, about 700 elegates did not vote at all. This 700, of ourse, will be disputed. But the official pologists cannot have it both ways. On the day efore the India debate the Press had been nformed that nearly 2,000 delegates were ttending the Conference. As they say, if the 00 is disputed the sum does not work out.

No Fighting Lead

The Conservative Party then has once more hown that it will never know in time the hings which b-long unto peace. But Mr. Baldwin as often spoken as if he did know ("Give eace in our time, oh Lord!" he once said in the House of Commons). Surely in his speech at Bristol therefore, on the day following that blind-hearted vote, he should have stood up to that vote and made a confession of his faith with regard to the future of India—have given those delegates something to chew upon, and India some guidance as to what that vote really amounts to. But instead of recalling the Conference to considerations of policy, he enlarged on the question of leaders and loyalties and the democratic approach thereto. It is the curse of the age that men follow leaders instead of principles.

As for the rest of his speech, it flitted over various urgent matters—unemployment, hours of labour, slum clearance. Nowhere was the fighting lead apparent. Action was promised "at the first opportunity" in the matter of the distressed areas. In this connection, perhaps, the Government has up its sleeve one of those afore-mentioned dummies. The four commissioners who investigated the distressed areas reported long ago. Their reports have been held up from publication for such ages that everyone has been asking how in the circumstances any useful action could be taken on them this winter. But perhaps they are to come into the shop window to grace the opening of the last session before the General Election.

Mining Accidents

On the subject of the shorter working week, the Conservative leader had nothing new to say. Once more we were told that the time has not yet come to adopt the Geneva Convention. Not yet come in these days of ever-increasing mechanization! But he "would like to see it in operation in the Mining Industry."

This really does call for comment—especially when the fire at Gresford Colliery is such a recent reminder of what a miner's life can be like In the first place it was Mr. Baldwin's own Conservative Government which, in 1926, put an extra hour on to the miner's working day.

The Mining Industry is in its nature an exceptional one and calls for exceptional consideration. On July 4th this year, long before the Gresford disaster, Official Reports were issued by the Mining Inspectors for Northumberland, Durham, Cumberland, Westmorland, the North Riding of Yorkshire, parts of Lancashire, North and South Derbyshire, Leicestershire and the ironstone mines of Northants and Lincolnshire. These Reports pointed out "a disturbing increase" in the number of fatal and non-fatal accidents. In September, commenting on the Gresford fire, one authority wrote: "The price of coal in human life is nearly 1,000 killed every year and 150,000 injured. The latter number is the size of our first British Expeditionary Force." (But for the miners, their war is still going on.)

It is unfortunately the case that the provision of safety devices in the mines is largely haphazard and left to the choice of the mine-owners. Much more is going to be heard on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this subject and it is to be hoped that Parliament has at last been shocked into doing its utmost to regularize the position. But perhaps, in passing, one suggestion which has been made is worth putting on record. This suggestion is that preferential rates of insurance should be given to a mine in accordance with the provision of safety devices made in that mine. Preferential rates should not as now depend on the accident rate: accidents may be rare in a given mine for one reason or another, but a combination of circumstances might bring about an exceptional disaster—and all circumstances should be provided against. Merit insurance, as it is called, should be the only form of Insurance in operation in the Mines.

Miners' Hours

But all the experts who have made themselves familiar with the problems of the mining industry are agreed that, in the last resort, it is the human factor that is the most important. Indeed in the anxious life underground, so important is it that everyone should be sensitive and alert to what is happening to the mine at every passing moment, that even the pit ponies have played an essential part in sensing danger.

All are agreed that safety in the mine depends on the efficiency and awareness of the miner. Yet we know that accidents are more frequent during the last hour of the shift—and how can we dare to say that the time has not yet come to shorten the miner's hours?

Miners' Wages

While he was glancing at the Mining Industry, Mr. Baldwin might have given a thought to the miners' wages and the strike which has only just been averted in South Wales. The men were asking for a restoration of the cut made in their pay in 1931. Their claim was backed up by that National Industrial Coal Board. And even if the cut were to be restored in full, the real wages of the lowest paid miner would still be lower than in 1914. The public are always fogged about the miners' wages because they hear that the miner gets say 7-6d a day and they multiply it by seven. But the truth is of course that very many miners are only working two or three days a week. Some of them are only bringing home £1 a week! In such cases, perhaps, they seek assistance from public sources. What gratitude on the part of the public to see their miners in such a pass! But supposing that even with such assistance their money adds up to the amount of the dole. Is that a suitable reward for men engaging in the most dangerous and arduous of industries? How can it be enough to fit them for the toil and anxieties laid on them? Even if they worked a full week the miners, at the present rates per shift, would be receiving a miserably inadequate wage.

But coal-getting and money-getting cannot go together. And the story of how men have tried to make profits out of coal is probably one of the most discreditable and sickening in the world. It begins badly with the reyalties paid to owners of the land in which coal has been found a tribute exacted by the landowners in return for no service on their part whatever.

Then consider the scandal of the position of the Fireman in the mine. Explosions in the mine arise from an increase in the percentage of gas in the mine. It is the duty of the Fireman to see that this percentage does not rise above 2½ per cent, and if it does he must withdraw the men. Yet this same Fireman is also given the duty of keeping up the output of coal! In other words, it is in his interest to keep the men at work in the mine as long as possible. How this works out in practice is indicated by a letter which appeared in the Press this week from one such ex-fireman. During the third week on the job, he writes, he discovered a quantity of gas in a certain working area. When making his daily report, however, he was "told by a superior to put down only a small quantity of gas, instead of giving the full figures." And he adds: "Owing to my refusal to do this, I lost my situation."

But the Conservative Conference worries very little about these things. At both the Conservative Conference at Bristol and the Labour Conference at Southport a collection was taken up in aid of the dependents of the dead Gresford miners. It is surely expressive of the approach of the two Parties to these questions that the 2000 Conservative delegates only contributed between them £50 while the 800 Labour delegates managed to raise £131.

Slum Landlords

The Conservatives were only roused to enthusiasm when they heard Sir Henry Page Croft downing freedom in India; Viscount Wolmer advocating increasing the power of the House of Lords; Mr. Neville Chamberlain hinting darkly at secret plans for strengthening our armaments; and when, amid cries of "Hilton Young resign!", they passed a resolution calling on the Government to be sure and compensate the slum landlords.

Sir Hilton Young once delivered himself of the sentiment that slum landlords had no more right to be compensated for their bad houses than butchers had to be compensated for the sale of bad meat. This the Conservatives, or the delegates they sent to the Conference, have never forgotten. Have they ever, one wonders, heard of the Potteries? In the Potteries the death-rate from consumption is 34 per cent higher than for England and Wales as a whole. It is 60 per cent higher than for the surrounding county of Staffordshire. And here is the reason. According to a Report published by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Burslem and District Co-operative Party, "One out of every six houses in the Potteries is unfit for human habitation, and one out of every five persons is living in houses which have been condemned for many years."

In Liverpool this last week a mother of nine children, who lived with her family in *two rooms*, died in child-birth. Ever since 1915 this woman had been applying to the Council for a house. On the day that she died a notice was received that she would be given the first four-roomed house available. Available! This scandal was revealed by a Liverpool Labour woman Councillor, Mrs. Braddock, who also stated that she was informed by the Medical Officer who attended the dead woman that "It was possible that the woman would not have died had proper housing conditions been provided for her."

Sir Hilton Young, in conference with the Plymouth City Council a week ago, foreshadowed a new housing drive, more especially in the matter of overcrowding. It is also prophesied that a young and lusty Housing Minister may be one of the other dummies in the shop window. A dummy it must remain so long as we are confronted by apathy such as seems to prevail amongst local councillors in Liverpool and the Potteries and not only there. Apathy encouraged now by an instruction from the Conservative Conference to see that slum landlords are compensated. And be it noted that in his speech at the close of the Conservative Conference Mr. Baldwin said that he would see what could be done to remove their anxiety.

The Labour Conference

If the Conservative Conference at Bristol showed the Party, within a year of the General Election, more reactionary than ever, the Labour Party Conference at Southport talked as if they were within sight of office already! This in spite of the fact that, according to one observer, the tacit opinion is that "before a Labour Administration returns to Downing Street, the Party in Parliament will have to trudge stoutly over at least six years of Opposition sand."

From the point of view of taking office, the Executive must be very pleased with the expeditious manner in which the Conference annihilated Sir Stafford Cripps and his Socialist Leaguers. The trouble with the Socialist Leaguers is that they have learned too much from their Conservative opponents and the use they make of Emergency Powers Acts and Orders in Council. They would like to proceed in a similarly undemocratic manner. Believing quite sincerely that Labour can never create a socialist system within the Capitalist State they would like, as soon as Labour is returned to office, to put their schemes into force by a series of emergency decrees. In this way they would proceed to take over the banks and the basic industries and to fight the House of Lords. In his speech to the Conference Sir Stafford Cripps even suggested that this would have to be done in a week or two if a Labour Government were to survive!

The answer to this quixotic proposal is, of course, the answer to all legislation or reforms imposed from the top. They never last. Because they have no roots, they wither away. And, however much you may disguise it, the sanction for such legislation will only be *force*. The evolutionary, democratic path may be terribly slow, but it is the only abiding and successful way.

Be this as it may, the Labour Party Conference voted down the Socialist League by 2,146,000 votes to 206,000. And the next day they completed the disarming of the Leaguers by admitting Sir Stafford Cripps to the Party Executive. As one critic wittily observed, they smacked him one day and gave him a bun the next!

Peace and Disarmament

But the event which will make the Southport Conference memorable was the adoption of Labour's peace and disarmament policy. This was carried by 1,953,000 votes against 269,000. This policy, in the words of Major Attlee, M.P., who spoke for the Executive, deliberately places world order before loyalty towards country. This means that the Labour Party places the League of Nations and collective peace above national armaments. Lord Hailsham, the Minister for War in the National Government, has seen fit to attack the Labour Party and to pretend that their policy is a threat to patriotism and loyalty to King and country. But the truth is that in putting world order before private loyalties the Labour Party is only re-affirming the ideals to which we are pledged in the League Covenant and the Kellogg Pact. As even the *Times* admits, they are but following "the professed aim, not of one particular party, or of one particular Government, but of every country which belongs to the League of Nations." To quote Nurse Cavell's last words that have an abiding place on her monument in London: "Patriotism is not enough.'

The debate on peace and disarmament touched a very high level and this was due to the presence of Mr. Arthur Henderson, the President of the Disarmament Conference. He made the speech of his lifetime and its influence hung about all the discussion. "Labour's policy," he said, "is directed towards the abolition of war through the League of Nations and the strengthening of the collective peace system." And he went on to emphasize that a collective peace system implies "pledges to refrain from war, *to accept community judgment* on what constitutes aggression, or resort to war sanctions, peaceful settlement of disputes and disarmament."

It should be plain, of course, that the heart of the matter lies in the pledge to accept community judgment. This is a surrender of national sovereignty: a surrender in the interest of the whole comity of nations. There were those in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Conference who disputed this essential point. As out and out pacifists they were anxious rather to pledge the Party to a policy of war resistance, and to the use of the general strike as a means of stopping war. But, though we cannot doubt the sincerity of these pacifists, their position cannot really be maintained in logic. So long as any section of the world community reserves to itself the right to make or refrain from war, wars will continue. Those who seek to arm the League of Nations are not in any way condoning armaments and wars. They are only giving the League the means of compelling the nations to keep the peace. There is no question that, by following such a policy, a Labour Government in England might find itself committed to joining in a capitalists' war. The armed forces of the League would not wage any war. They would merely knock the heads of the belligerents together and compel them to go to law to settle their differences.

"The Soviet Union," said Mr. Henderson, "when it entered the League, promised to fulfil all the obligations of the Covenant." And surely Russia has traversed all this ground. Indeed even in its present unarmed impotent state the League of Nations, the pale shadow of what it will one day become, is the best security there exists for peace. War between Russia and Japan has for some time seemed a probability. It still may be. But the fact remains that the moment it was known that Russia would enter the League Japanese bonds began to appreciate in the money market. Why? It was, in the words of the *Financial News*, because "the almost certain entry of the Soviet Union into the League increases the chances of war being avoided altogether."

Mussolini on Disarmament

Fascism, at all events, has not taken long to reply to Mr. Henderson. Yesterday Signor Mussolini, speaking at Milan to a meeting of 250,000 Fascists, opined: "All attempts at disarmament have failed. Mr. Henderson is tenacious, but he cannot succeed in reviving the Lazarus of disarmament, which lies buried under navies and cannon."

It is strange that the Duce should have spoken of the Lazarus of disarmament. He might have spoken of its "putrid corpse", which was the elegant manner in which he once described the state of liberty in Italy. For, after all, Lazarus did come back from the dead—even though the unbelievers laughed the idea to scorn.

PRESIDENTIAL ADDRESS OF MR. RAMANANDA CHATTERJEE

AT THE ALL INDIA ANTI-COMMUNAL "AWARD" CONFERENCE, BOMBAY, 25TH OCTOBER, 1934

THE BRITISH PRIME MINISTER'S INDIAN COMMUNAL DECISION

Sir Govindrao Balwant Pradhan, Fellow Delegates and Friends,

I thank you most sincerely and cordially for your kindness in electing me to preside over the deliberations of this very important conference, though I wish your choice had fallen on some active and leading political worker, instead of on a journalist.

Main Political Problem—To Win Freedom

The main political problem before us is how to win freedom for India. It is the bounden duty of all of us to strive to win it. Our opinions and methods may differ, but our object should be identical. It is my considered opinion that the Communal Decision is an obstacle in the way of our endeavours to win freedom. Whether this Decision remains or is rejected, we must persist in the struggle for freedom. But as in a well-thought-out campaign the general does not march forward towards the goal leaving a stronghold behind in the possession of his antagonists, so it would not be wise for us to advance without a simultaneous and strenuous endeavour at least to weaken, if not to eradicate, communalism. It is for this reason that, as a humble camp-follower of all soldiers of freedom, I shall try to expose the mischievous and dangerous character of the Communal Decision.

Not an Award but a Decision

I do not know who first called it the Communal Award. Mr. James Ramsay MacDonald, the British Prime Minister, calls it a decision. And a decision it is. The nominees of the Government who attended the so-called Round Table Conference did not all agree to accept the arbitration of the Premier. Hence, the decision which he has given is not binding on them as an award given by an arbitrator of their choice would have been. Moreover, even if they had unanimously chosen him their arbitrator, and if he had given an award as such, his award would not have been binding on the people of India, because the nominees of the Government who attended the so-called Round Table Conference were not elected by the people of India as their representatives.

Joint Action Made Impossible

No one can accuse our Government of being over-respectful or over-responsive to public opinion. It would not be difficult to mention occasions when Government have ridden roughshod over public opinion. One may, therefore, be curious to know why Government want us to be unanimous as regards the reforms we want, knowing all the while that every care has been and is being taken to prevent unanimity. When Britain gave Canada a self-ruling constitution, did she require all parties in Canada to arrive at an greed settlement among themselves?

One may also be curious to know why, before Government gave us any idea of the kind of constitution that was going to be given to us, there should have been such a hurry to give a communal decision. If Government had given us a definite promise of at least Dominion Status, it would have been comparatively easy for us to arrive at an agreed settlement. But to us was given first a Communal Decision! And it was of such a character that it could have no other result than to set different classes and religious communities —and even the two sexes—by the ear, thus making a joint struggle for freedom impracticable, if not impossible. One is considered to intend the usual and natural result of one's action. If so, it would not be unfair to hold that Mr. James Ramsay MacDonald intended that his Communal Decision should have the result which it has had. It has side-tracked the main issue. At the same time, it is not possible to tackle the main issue without attacking the side issue of the Communal Decision, because the latter lays the axe at the root of national unity. So long as the Communal Decision continues to be enforced, it will so vivisect and divide the nation as to make all mass action, all joint action, all national action, impossible.

Premier's Statement

On the publication of the text of the Decision of His Majesty's Government on communal problems, the British Prime Minister issued a statement, in the course of which he said:

"We never wished to intervene in the communal controversies of India. . . . We have realised from the very first that any decision that we may make is likely, to begin with at any rate, to be criticized by every community purely from the point of view of its own complete demands, but we believe that in the end, considerations of Indian needs will prevail and all communities will see that their duty is to co-operate in working the new constitution which is to give India a new place in the British Commonwealth of Nations."

Mr. Ramsay MacDonald added that the British Government had to undertake the duty of giving their decision on India's constitutional communal problems, because of "the failure of the communities to agree amongst themselves" and "in response to repeated appeals from representative Indians."

Communal Controversy Has British Parentage

In order to apportion blame fairly it is necessary to refer briefly to the origin of the communal controversies and their subsequent history.

It may be true, though one cannot be sure, that the present Prime Minister and his former and present colleagues, who had to do with the first and second sessions of the so-called Round Table Conference, never wished to intervene in the communal controversies of India. But who were responsible for the origin and growth of communal controversies in the field of Indian politics? It is a matter of common knowledge that our communal problems in their political aspects were virtually created by Governor-General Lord Minto in the first decade of this century. To prove this it is not necessary to state that the late Maulana Mohammad Ali said in his Congress presidential address that the Muhammadan deputation which waited upon Lord Minto, asking for separate favourable treatment for the Muslims

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as regards seats in the legislative bodies and appointments in the public services, was a "command performance," which means that the deputation was got up at the suggestion of some high-placed officer or officers of the Government; nor is it necessary to refer to a similar statement made by Maulvi Abdus Samad, M. L. C., as Chairman of the Reception Committee of the Murshidabad Session of the Bengal Provincial Conference. For, Lord Morley, as Secretary of State for India, wrote on the 6th December, 1909, to Lord Minto:

"I won't follow you again into our Mahometan dispute. Only I respectfully remind you once more that it was your early speech about their extra claims that first started the M. (Mahometan) hare." "Recollections" by John Viscount Morley, Vol. ii, p. 325.

Other corroborative evidence, and that too from official publications, is also available. For example, the following passages are to be found in the Report of the Indian Central Committee, published by the Government of India—

"58. It was at the time of the Morley-Minto Reforms that the claim for communal electorates was advanced by the Muhammadans inspired by certain officials." P. 113.

Again:

"66. It is often said that we must adhere to the promise made by Lord Minto's Government to the Muhammadan Deputation that waited on him in 1907-8. We will not bring forward the fact, which is now established beyond doubt, that there was no spontaneous demand by the Muslims at that time for separate electorates, but it was only put forward by them at the instigation of an official whose name is now well known." P. 117.

These two passages are taken from the Memorandum by the Hon. Sir Sankaran Nair, Chairman of the Indian Central Committee, a Hindu, the Hon. Raja Nawab Ali Khan, member of the Committee, a Musalman, and the Hon. Sardar Bahadur Shivdev Singh Uberoi, member of the Committee—a Sikh. There is no criticism or contradiction of the statements made in these passages either in the body of the Report of the Indian Central Committee or the Minutes of Dissent submitted by different members, Muslim and non-Muslim.

Therefore, there appears to be no doubt that the device of the separate communal electorate can rightly claim British parentage.

Condemned even by British Historians

Separate communal electorates have been condemned in the latest British history of India, *viz.*, "Rise and Fulfilment of British Rule in India" by Edward Thompson and C. F. Garratt, as follows:

"Their effect was wholly bad. It is not only that they have led Indians to organize along sectarian lines, for this was probably inevitable, and caste grouping occurs even within the Hindu constituencies, but the system throws up the worst type of pugnacious fanatic, who loves 'to prove his doctrines orthodox by apostolic blows and knocks.' The feeling that great changes were going to take place and the prospect of some actual transfer of responsibility and control over appointments, have combined to rouse all the meaner political passions, especially in those provinces, like Bengal and the Punjab, where the two communities are nearly equal in number. Middle class unemployment and a family system which elevates nepotism into something like a virtue, have also helped to embitter the politico-religious struggle. A further and very grave disadvantage of the communal electorate is that an alteration in the parties can only occur through differences in the birth-rate. And both sides are stirred to new missionary enterprise, when the reward is not only a soul but also a permanent addition to one's voting strength. The activities of the Arya Samaj amongst the poor Muslim and the various Mohammadan bodies amongst the lower caste Hindu, have aroused the greatest bitterness. The politicians get all the support they need from an irresponsible press, while ill-feeling amongst the educated classes is kept alive by scurrilities like the 'Rangila Rasul.'"

I do not know whether the authors intend to suggest that nepotism is a failing peculiar to Indians, or that the community to which the writer of 'Rangila Rasul' belonged was alone responsible for scurrilities, or that the Indian Press has a monopoly of irresponsibility. But otherwise on the whole Messrs. Thompson and Garratt are quite fair and just in their criticism of separate communal electorates.

Partiality Shown to Muhammadans

Sir Bampfylde Fuller's "favourite wife" theory and Lord Olivier's observations on the British attitude towards Moslems are well known. For decades, there has been discrimination in favour of Mussalmans in the provision of special educational facilities. The reservation of large proportions of posts in the public services for Muslims, Anglo-Indians and the like, recently made, is another case in point. Both in the Morley-Minto and Montagu-Chelmsford Constitutions separate electorates were provided for the Mussalmans, thus whetting their appetite for such things. Lastly, during both the sessions of the Round Table Conference the Imperialist die-hards and the members of the European Association then in England had been constantly strengthening and stimulating the separatist communal zeal of the Muslim "delegates" to the R. T. C. The Prime Minister need not be reminded that all the Muslim "delegates" were separatists, except latterly Sir Ali Imam, who was not allowed to or did not take part in the Round Table Conference. Is it any wonder then that there was no communal agreement? More recently, the Hindu Leaders at the Unity Conference at Allahabad agreed to the Muslim Communalist demands, as far as they could, in order to secure Muslim support to the Indian Nationalist programme. It was agreed that Sind should be separated, some safe-guards being provided for the Hindu minority and a Muslim Hindu committee being appointed to find out ways and means for financing the new Sind province. This was, of course, a mere paper agreement, as the leaders of the Unity Conference had no power to separate Sind from Bombay and do the other things necessary to implement the agreement. Government is in a far better position—it can do things by its fiat. When the Hindus had agreed definitely to the separation of Sind, of course, on some conditions, Government came into the scene with a higher bid for Moslem support—Sir Samuel Hoare declared that Sind would be separated—unconditionally, of course!

The Unity conference at Allahabad had agreed also to give the Moslems 32 per cent of the seats at the Central Legislature. It was a paper promise made by persons who had no power to deliver the goods. Sir Samuel Hoare made a higher bid for Moslem Support. He promised to give them 33|1-3 per cent of the seats and he has the power to deliver the goods. So Moslem support went to him, the highest bidder, who can deliver the goods.

Government's Failure

The British rulers being thus, in part at least, responsible for political disaggreements among the com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...ties, it was their bounden duty to devise a scheme ...ch would tend to produce agreement among them. ...s they have not done.

The failure of Government's own nominated men ...come to an agreement cannot be rightly spoken of ...he failure of the communities themselves. Nor were ...e of them "representative Indians." It may be that, ...if the communities had chosen their own repre...atives, they too would perhaps have failed to reach ...agreement. That would, however, have been due in ...small measure to the communalist mentality created ...fostered by the Government's own policy and ...sures. But the British Government neither asked ...allowed the communities to choose their own repre...atives for the purpose of arriving at an agreement.

Perfect Unanimity Impossible

It has never also been definitely stated by the ...ish Government in Britain or in India what degree ...greement would be acceptable to them, assuming of ...se, without admitting, that they would really wel...e a communal agreement. If perfect unanimity were ...ired, that would perhaps be unattainable. Even in ...ain and other Western countries there is no unani..., there is great divergence of opinion, among different ...ies, in relation to many matters of the greatest im...ance. So, it ought to suffice, if in India important ...influential sections of different communities come ...n agreement on essential constitutional points.

Now, Nationalist Muslims, assembled at the Lucknow ...ference, voted in favour of joint electorates. At the ...ipur Conference they did the same. These decisions ...e approved and welcomed by the Hindus. The ...al Presidency Muslim League's resolution in favour ...int electorates was fully endorsed by Hindu leaders ...ll shades of political opinion, and this endorsement ...published in the papers. Similar resolutions have ...passed at meetings of other Muslim associations. ...a meeting of the Bengal Legislative Council, attended ...Muslim, Hindu, European and other members, a ...ution in favour of joint electorates was carried. At ...same Council, in the course of the debate on the ...icipal Bill a similar voting in favour of joint elector... took place.

Government's Anxiety to Safe-guard Muslim Interests!

But in spite of these clear indications that all ...dus and an important section of the Muslims are in ...r of joint electorates—at least in Bengal, the com...al decision was given in favour of separate elector... in all provinces. And why? Apparently because ...ction of Muslims want separate electorates. On the ...side, there were an important section of Musalmans ...all Hindus and many Christians, etc., in favour of ...t electorates; on the other, there was a section of ...almans in favour of separate electorates, to which ...Hindus were opposed. Hence, to all fair-minded ...it should have been clear that the preponderating ...ion was in favour of joint electorates. Under the ...umstances, it would not be unfair to conclude that ...Decision has gone in favour of separate electorates, ...se British Imperialists do not want a united India, ...want a divided India, and also because Britishers ...dia want a decisive voice in the government of the ...try by means of separate electorates. What they ...care for above all, is a separate electorate and ...effective voice for themselves in Indian legis...es. Instead of saying so plainly, they profess great ...y for safe-guarding the interests of Muslims and ...others by separate electorates. But sometimes in unguarded moments the real truth comes out. For example, in an issue of "The Statesman" of Calcutta it was observed:

"It is from the hands of Britishers that the new constitution must come, and in no circumstances is it conceivable that the British community here with its enormous stake in the country would accept annihilation."

It is understood, of course, that "annihilation," means "not having for themselves the casting vote," as it were, in the legislative bodies by means of over-representation by separate electorates for themselves—and by securing a permanent overwhelming statutory majority in the Councils for themselves and the subservient section of Muslims combined. This Calcutta British Organ advocated the system of separate electorates for selfish reasons, knowing quite well all the while that it is an evil thing. For, it wrote:

"Nobody will argue that separate electorates are beneficial, that they promote the feeling of nationhood, or that they do not tend to keep open sores and prevent the healing of differences."

Fate of Agreed Settlements

I have shown that there has been substantial agreement between the Hindus and an important section of the Muslims—the Nationalist Muslims, particularly in Bengal, in favour of joint electorates. Hence the British Cabinet should and could have given their decision in its favour at least in Bengal. The Premier has stated that the Government will "be ready and willing to substitute for their scheme any scheme either in respect of any one or more of the Governor's provinces or in respect of the whole of British India that is generally agreed to and accepted by all the parties affected." This assurance has been repeated in the Government's decision. Therefore, Government could have given joint electorates at least to some of the provinces, e.g., Bengal. That they have not done so, shows that they do not desire even a partial mitigation of the harmful features of their scheme, they appear to want from the vast population of India a complete scheme of which all points are agreed to and accepted by all the present and any possible future mushroom parties affected. It is and would be impossible to satisfy such a condition. For at any moment at the dictate of the British Imperialists, who are in a position to offer inducements, dissident parties may make their appearance. Hence, it would be foolish to build any hopes on the words in the Decision which say that Government "are most desirous to close no door to an agreed settlement," as "agreed" appears to imply perfect unanimity on all points on the part of all possible existing and future parties.

Another "agreed settlement" which the British Cabinet did not accept is the Rajah-Moonje pact between Rao Bahadur M. C. Rajah, the leader of the vast majority of the Depressed Classes and Dr. B. S. Moonje, the then working President of the Hindu Mahasabha, according to which the Depressed Class Hindus were to have a number of seats reserved for them in proportion to their numbers to be filled by election by joint electorates. Mr. Rajah has pointed out that the Depressed Classes have got less seats by the award than they would have got by this pact. The White Paper proposals are partly based on the Communal Decision, and they also supplement it as regards the distribution of seats in the Federal Legislature. In that legislature, too, the Depressed Classes have got less seats. The professed leaders of the Depressed Classes in the R. T. C. entered into the Minority Pact with the Muslim delegates in that body. That the Depressed Classes were made cat's-paws will appear from the following figures:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In British India, minus Burma, according to the Government Census Report, Moslems number 6,64,78,669 and the Depressed Classes number 4,02,54,576. In the Lower Chamber of the Federal Legislature Moslems are to get 82 seats, and the Depressed Classes only 19. In proportion to the Moslem seats they ought to have got 49 seats. The number of seats to be given to the Depressed Classes in the Upper Chamber is not even mentioned. Perhaps no seat is to be reserved for them.

Mr. MacDonald's Wrong Contention

Mr. MacDonald defends the continuance of separate electorates on the ground that they have been regarded by minority communities as an essential protection for their rights. But this is not true of all minority communities. For example: except in Madras, there have not been separate electorates for Indian Christians, and generally speaking, they have not asked for, but are rather opposed to, separate electorates; the most important organizations of the depressed classes who by the by are not a religious community by themselves, have insisted on joint electorates; and the foremost leaders of the women of India, who also are not at all a community by themselves, have been opposed to separate communal electorates. Yet all these groups have been cursed with that evil thing.

Even if Mr. MacDonald's defence of separate electoraes for minority communities were assumed to be valid, why has he given separate electorates to the Muslim majority communities in Bengal and the Punjab, where the Hindu and Sikh minority communities did not initiate the claim to protection by such electorates?

It is not true and it has not been proved that separate electorates give protection to minorities, or that their interests are promoted or safe-guarded when those of India as a whole suffer.

Premier's Illogical Reasoning

The Premier says in his statement: "I want to see greater and smaller communities working together in peace and amity." If he be really sincere, he must be blessed, or rather cursed, with a perfectly illogical and obtuse mind. For, with his colleagues, he has divided the people of India into political groups in such a way that, if they were not hitherto mutually suspicious and distrustful, they would henceforth suspect and be envious and jealous of one another, and, if already mutually distrustful, would have that distrust greatly increased. And having done this, he asks the world to believe that he sincerely desires the people of India to work together in peace and amity.

He says, "Government have to face facts as they are and must maintain this exceptional form of representation." But when will British politicians have the honesty and courage to face the other and prior fact that facts are as they are, at least partly, because it was Lord Minto's early speech about the Moslem's extra claims "that first started the Moslem hare," as Lord Morley put it, and that the Morley-Minto "reforms" and the Montagu-Chelmsford "reforms" have been such as to lead that hare to keep itself in evidence ever since?

Government and the Deperssed Classes

In the Premier's opinion,

"The anomaly of giving certain members of Depressed Classes two votes is abundantly justified by the urgent need of securing that their claims should be effectively expressed and the prospects of improving their actual condition promoted."

We do not object to the Depressed Classes having any real advantage. What is strongly objected to is their complete or partial separation from the main body of the Hindus. It cannot be admitted that Government have been in practice particular well-wishers of the Depressed Classes. Dr. Ambedkar's arraignment of Government in his Nagpur presidential address is well-known. Recently, the defeat in the Bombay Council of Mr. Bakhale's Bill for the removal of the disabilities of the Depressed Classes, has shown the real attitude of Government.

The enlightened and progressive sections of the Hindu community have been making considerable efforts to improve the condition of the Depressed Classes, so that they may not long remain depressed. But Government now in effect declare that all "caste" Hindus, as Britishers call them, are hostile to the Depressed Classes, or at least indifferent to their lot, and that therefore separate electorates are required for them to protect their interests against the imaginary attacks of the 'caste' Hindus. And Government have also offered inducements to these classes to continue to admit their "untouchability" and to deserve the title "depressed" so as to remain entitled to separate seats. Under the circumstances, "the prospects of improving their actual condition," social, educational and economic, must be poor indeed.

Representation of Women

Regarding the representation of women, Mr. MacDonald observes:

"As regards women voters, it has been widely recognized in recent years that the women's movement in India holds one of the keys of progress. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated and influential citizens. There are undoubtedly serious objections to extending to representation of women the communal method, but if seats are to be reserved for women as such and women members are to be fairly distributed among the communities, there is in the existing circumstances no alternative."

I have already pointed out that the leading exponents of women's rights never wanted a communal distribution of seats for themselves. Hence separate communal electorates ought not to have been thrust upon them. The Premier talks of women playing their due part as "educated and influential citizens" for which education and interest and participation in public movements are essential, and he talks of a fair distribution of women's seats among the communities. I suppose that he nevertheless thinks that if women's seats are distributed merely by counting heads, and not according to the extent of education and the comparative absence or presence of public spirit among the women of different communities that is a fair distribution. It is well known that the leaders of the section of Musalman Bengalis whose views have found acceptance with the Government think that the women who would stand as candidates and cast votes, are undesirable specimens of their sex. It is also well known that female education has made comparatively much less progress among the Muslim Community than among the Hindus. And owing to their social and educational handicap, Muslim women can take very much smaller interest and part in civic and other public movements and affairs than Hindu women. In spite of these facts, the Premier thinks it fair to give the same number of seats to Muslim women as to Hindu women! Let me not be misunderstood. I cordially welcome the prospect of Muslim women taking part in public affairs. It is only the Premier's claim of fair distribution of women's seats which I repudiate.

Attempt Fair and Honest!

One can imagine the inward glee with which the Premier rubs in the failure of the Government nominees the R. T. C. to produce an agreed scheme, by telling the Indian communities"—

"Let them remember when examining the scheme that they themselves failed when pressed again and again to produce to us some plan which would give general satisfaction."

Assuming that the failure of the Government nominees must mean the failure of "the Indian Communities," who did not choose them, is that any reason why the British Cabinet should feel justified in expecting the people to accept their manifestly mischievous scheme? The Premier thinks it a "fair and honest attempt." It does not seem axiomatic that it is either.

The Decision keeps old obstacles and creates new ones

He says: "The most that Government can hope for is that their decision will remove an obstacle from the path of constitutional advance." It is a curious hope, seeing that the decision keeps the old obstacles intact and creates new ones. There can never be any constitutional advance by means of constitutional methods without the joint endeavour of all communities: but the word "joint" is a taboo, and 'separate' is the word beloved of the rulers of India. Inconsistently enough, however, the Premier says to the Indian communities, whom the scheme practically requires to non-co-operate with one another, "their duty is to co-operate in working the new constitution which is to give India a new place in the British Commonwealth of Nations;" and he concludes his sanctimonious homily with the similar observation that "communal co-operation is a condition of progress and that it is their special duty to put upon themselves the responsibility of making the new constitution work." As Mr. MacDonald is neither Machiavelli nor Mephistopheles, but the Prime Minister of a great people, one ought to think that he is not indulging in a grim joke. It is my considered opinion that, in spite of the disruptive tendencies of what the British Cabinet have done, all Indian communities ought to co-operate—not, of course, for making the new constitution work, but for radically mending it, or if that be impossible, for ending it and making a beneficent one in its stead. For, even if it were workable, it cannot produce any balance of good result.

But Where is Swaraj?

What is the "new place" "the new constitution" according to Mr. MacDonald is to give India in the British Commonwealth of Nation? That of a habitation of helots who must not make any joint endeavours to be and remain free? What are the precious of rights of free men for which different communities and groups are going to scramble and fight? Of what kind of Swaraj, of what rights, are the communalists going to get a big share? The Premier's statement and the decision are both silent on these points.

Incompatible with National Self-rule

In the second paragraph of his statement relating to Government's Communal Decision the British Premier says:

"We have realised from the very first that any decision that we may make is likely, to begin with at any rate, to be criticised by every community purely from the point of view of its own complete demands."

As this sentence does not indicate the worst fault, mischievousness or maleficence of the decision, critics should not be put off the scent by it. The decision is not to be considered mainly as against the interests of this Indian community or group or that, but as against the national interest of all Indian as *pro*-Britain and *contra*-India. I shall show later on that the Decision is utterly incompatible with national self-rule.

One of the essential conditions of democratic and responsible Government is that what is today a minority party may become the majority party tomorrow by the conversion of its opponents to its way of thinking, or owing to other causes. In this way all groups have an effective chance of giving the nation the benefit of their wisdom, capacity and public spirit. The changeability of the personnel of the ruling party gives the ruling majority for the time being a sense of its real responsibility to the nation and exercises an effective check on arbitrary, irregular or corrupt methods and actions. But if a constitution makes any religious community, as a community, the permanent ruling majority, or the permanent tools in the hands of the alien real rulers, there cannot be any democratic and responsible self-rule in the country, and all the advantages of such rule pointed out above are lost. The Communal Decision militates against the essential conditions of democratic and responsible Government and would, if given effect to, deprive India of all the advantages of such Government.

It subjects the Hindus to grave, contemptuous and insulting injustice—perhaps because it is they who have worked for and demanded self-rule most. Under it their representation becomes distinctly weaker in some provinces without getting stronger anywhere, as I shall show later on. It must cause grave anxiety to all real patriots, as, under the circumstances, there can be no peace and no peaceful progress. For, lovers of non-violent methods will be untrue to themselves if they accept the Decision and co-operate to work a communalism-ridden constitution, and do not make the utmost efforts in a peaceful and legitimate manner to unsettle the Decision.

Though there is much cause for anxiety, there is none for being down-hearted. Difficulties exist and crop up only to try our mettle and manhood, which can be proved by overcoming them. Hindu and other Nationalists and Hindus in general, will not, cannot, be crushed.

More Than Communal

The communal decision or, to use the Prime Minister's exact language, "decision on communal representation," is something else in addition to being communal. Properly speaking, the communal decision ought to have assigned their respective shares in the legislative bodies only to the religious communities. But it has done more. Women are not a religious community by themselves; nor are Europeans and Anglo-Indians, Land-holders, Universities, Labour, and the Depressed Classes separate communities. But the decision assigns seats to all these groups—perhaps to maintain "the balance between the communities" desired by the bureaucracy in their own interests. In this there has been an irregularity or impropriety in procedure also. In Chapter XXI of the Indian Franchise Committee's Report, devoted to a discussion of questions relating to the representation of labour, landlords, commerce, and other interests not communities, it has been observed:

"We desire to add that some of our number have felt considerably hampered in dealing with the questions discussed in this chapter by the fact that the communal issue has not yet been decided, and they reserve their right to reconsider their recommendations in the light of the decision that may eventually be reached."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The decision has deprived them of this right, as it has been made without consulting the Franchise Committee. And it is also to be noted that it has been arrived at without consultation with the Round Table Conference or the Consultative Committee or any other similar body.

The indications given in the decision that there may be second chambers, at least in some provinces, have also nothing to do with any communal decisions. They were probably meant to prepare the public for subsequent efforts to antagonize democracy by means of these plutocratic and pseudo-aristocratic bodies.

Makes National Action Impossible

The new constitution which the British Cabinet wants to give India proposes to do that which no free people or no people struggling to be free can put up with in any constitutional proposals meant for them. It intends so to split and divide the voters and the people of whom they are a part as to make mass action, national action, impossible. Without such combined action, freedom can neither be kept nor won. Nor can the bounds of freedom be made wider yet, without such action. Setting sex against sex, creeds against creeds, castes against castes, classes against classes, interests against interests appears to be the underlying mischievous 'principle' of the decision, though it is without any right principle and is full of anomalies. It is anti-national.

It was argued in favour of communal electorates that, as in litigation clients have the right to select their counsel, so voters ought to have the right to elect their representatives. Exactly. But do Muslim clients always choose Muslim advocates or Hindu clients Hindu advocates, and so on?

Undemocratic

The scheme is also undemocratic. In a democracy it is essential that those who are to conduct the affairs of the State as the representatives of the people should be chosen by them. If a country be inhabited by different religious communities of varying numerical strength and if at present or in course of time, these communities be equally educated, capable and public-spirited—which is desirable but which is not the case in India now, the numbers of the members of its legislature belonging to these different communities are likely to be roughly proportionate to their numerical strength.

If this ultimate ideal standard be borne in mind, it need not be considered a fundamental defect for a constitution to aim at the different communities and classes having proportionate shares in the legislature as the result of the open door to talent. What is fundamentally objectionable from the democratic point of view is the deprivation of entire groups of the opportunity of having anything to do with the election of legislators (and indirectly of members of the Cabinet) —specially of their majority, belonging to communties or classes other than their own. To take concrete examples:

Ruinous Effects of Separate Electorates

Mussalmans can vote only for Mussalman candidates, Indian Christians only for Indian Christian candidates, Hindus only for candidates who are Hindus, non-Muhammadans or non-Christians, etc. If in any place in the opinion of a Muslim voter a Hindu, Christian or any other non-Muslim candidate be the ablest and most impartial and public-spirited citizen, why should he be deprived of the support of such a Muslim voter? Again, if in any place in the opinion of a Hindu voter, a Muslim, or a Christian candidate be the worthiest of election, why should the Hindu voter be prevented from voting for that non-Hindu candidate and why should that non-Hindu candidate be deprived of the support of the Hindu voter? During the brief history of restrictedly representative institutions in India, many Hindus have voted for Christian and Muslim candidates, many Christians for non-Christians, and many Muslims for Hindus and Christians, and that with good results. Rank communalists may want to elect 100 per cent Hindus, 100 per cent Muslims, 100 per cent Christians; but it is more beneficial for a State to have as its legislators and rulers broad-minded, liberal persons who can look at things from the points of view of different classes and communities than to have narrow bigots, fanatics and obscurantists.

In the name of constitutional advance, and in order to get the support of communalists for foreign rule, the free or would-be free citizen's right to vote for a possibly worthiest candidate in his opinion, irrespective of creed or race, is being taken away, as also the right of that candidate to the support of all voters of all creeds or races who consider him worthiest.

Under a system of joint electorates, to whatever religious community or communities, classes, castes, interests or races, the majority of the members of a provincial council might belong, it could be said that people of all communities had helped to elect them and were responsible for choosing them. So the members also would feel their responsibility to and would and must try to promote the interests of all these groups. But under a system of separate electorates, in some provinces the majority of members would be Hindus elected exclusively by Hindus or, in any case, by non-Muslims and non-Christians, in some, the majority would be exclusively elected by Muslims, and in one province, Bengal, the majority would be either Muslims or Muslims cum Europeans elected exclusively by their co-religionists or compatriots. Hence, each province of India would be ruled by a foreign bureaucracy (for British domination would continue) through a majority of legislators for whose election people of all the groups would not be responsible and who would not feel responsible to and would not in consequence ordinarily try to promote the interests of all groups. This would be a highly undesirable state of things. It would not be self-rule or representative Government. It would be rule by people with whose election whole groups also would be inadequately served. Instead of the services of all members, they would be entitled to and would have the services only of particular groups. And the men elected would not necessarily be the ablest and wothiest available. Separate communal elections cannot conduce to the growth of capacity in a community, as outside competition is eliminated.

Opposed to MacDonald's First Pronouncement

Separate communal electorates with reservation of seats and weightage, are opposed also to Mr. Ramsay MacDonald's definite pronouncements and to the principles underlying the League of Nations' Minorities Guarantee Treaties. In 1931, Mr. MacDonald said in the course of his speech on the subject of the Round Table Conference at the debate initiated by him in the House of Commons:

"If every constituency is to be earmarked as to community or interest, there will be no room left for the growth of what we consider to be purely political organizations which would comprehend all communities, creeds, and conditions of faith. This is one of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lems which have to be faced; because, if India is
to develop a robust political life, there must be
for National political parties based upon concep-
of India's interest, and not upon conceptions regard-
the well-being of any field that is smaller or less
hensive than the whole of India. Then there is
ified proposal regarding that: a proposal is made
there should not be community constituencies with
communal register, but that with a common register
certain percentage of representation should be
anteed to certain communities. It is the first pro-
in a somewhat more attractive, democratic form,
still essentially the same."

This passage would make out the British Premier
an opponent not only of separate electorates for
ing the separate representatives of different com-
ities and interests, but also of the reservation for
of a certain percentage of seats to be filled by
electorates.

The following extract from his speech on the same
sion would lead one to conclude that he was an
ment of weightage, too:

"It is very difficult to convince these very
ghtful people (advocates of communal representa-
that if you give one community weightage, you
not create weightage out of nothing. You have to
it from somebody else. When they discover that,
become confused indeed, and find that they are up
nst a brick wall."

It now appears that this brick wall was entirely a
ent of Mr. MacDonald's imagination. For, the com-
alists have not been confronted with any difficulty
getting nor the British Cabinet in giving weightage
the expense of the Hindus, and in Bengal at the
ense of both Hindus and Muslims—more at the
ense of Hindus than of Muslim—for the advantage
ly of Europeans.

The provincial cabinets have not yet been divided
water-tight compartments, but such a division may
up the British Government's sleeve. So let me quote
ther passage from his House of Commons speech:

"Another problem that faces us from that point
iew is, if your legislature is to be composed in these
ertight compartments, whom are you going to appoint
r Executive? The claim is put that the Executive,
the Administration, the Cabinet, shall also be divided
watertight compartments."

And, of course, the claim will be met, directly or
irectly. Some ethically squeamish people may think
. MacDonald has been insincere, inconsistent, and
on. But they must be wrong. He has had to play
different galleries at different times; that is all.
d he has a good precedent for his inconsistency. The
ntagu-Chelmsford Report argued against separate
presentation but decided in its favour.

How The League of Nations Tackled Minorities Problem

The Minorities problem in India ought to have been
ed according to the principles underlying the Minori-
Guarantee Treaties, concluded under the auspices
the League of Nations, of which, both Great Britain
d India are Member States and to which, along with
eat Britain and other States India was one of the
natories and contracting parties. It is obvious that
e principles which the collective intelligence, wisdom
statesmanship of the world laid down to deal with
e Minorities problem in some twenty States of the
rld and which were accepted and enforced by Great
tain and India in the case of those States, should
ve been followed in the case of India, too. Far from the Minorities problem being peculiar to India, it has been a more serious problem in many European countries, being one of the underlying causes of the Great War, and it has been dealt with everywhere there according to the general and standardized treatment laid down in the League of Nations' Minorities Guarantee Treaties. But, as in everything else, from the spiritual and moral principles embodied in the Sermon on the Mount downwards, India is looked upon as a peculiar and unique country where all that is quite inapplicable is right and applicable elsewhere. I know India is not a clean slate as regards the Minorities problem. But neither were those European countries such where the Minorities Guarantee Treaties have been accepted and enforced.

The question whether the principles underlying the Minority Treaties should be applicable to all Member States of the League has been repeatedly discussed in the League Assembly. Ten years ago in 1922 an agreement was reached and a resolution was adopted in the third Assembly of the League, of which the fourth paragraph is quoted below:

"The Assembly expresses the hope that the States which are not bound by any legal obligation to the League with respect to minorities will nevertheless observe, in the treatment of their own racial, religious or linguistic minorities, at least as high a standard of justice and toleration as is required by any of the Treaties and by the regular action of the Council."

But far from this resolution being adhered to, either in spirit or to the letter, in the case of India, it has never been even considered, although Mr. Arthur Henderson, the then British Foreign Secretary, stated in January, 1931, at the meeting of the League Council as its Chairman that "the system of the protection of Minorities inaugurated by the League of Nations was now a part of the public law of Europe and of the world." (P. 24 of The Monthly Summary of the League of Nations, January, 1931). But India is outside the world, and hence a "high standard of justice," or in fact any standard of Justice, need not be followed here!

The Minorities Guarantee Treaties give protection only to the racial, religious and linguistic minorities only in matters relating to their racial culture, customs, language, and things of that description. Separate commercial, economic or political interests of any group (like those of the European sojourners, the landholders or the merchants in India) are not recognized, nor are merely social minorities (like the non-Brahmins or the "untouchables") recognized, as minorities entitled to protection. Hence separate communal representation and electorates have no place in any of the up-to-date Western constitutions, including that of Turkey.

All persons in India, whether belonging to a majority or minority group anywhere, should bear in mind what objects were sought to be achieved by means of the Minority Treaties and what evil results sought to be prevented. As reminders, the following extracts will serve a useful purpose. M. Blociszewski of Poland wrote in his note of March, 1922:

"We must avoid creating a state within a state. We must prevent the Minority from transforming itself into a privileged caste and taking definite form as a foreign group instead of becoming fused in the society in which it lives. If we take the exaggerated conception of the autonomy of Minorities to the last extreme, these minorities will become disruptive elements in the state and a source of national disorganization."

Speaking at the League Council on December 9, 1925, Sir Austen Chamberlain said:

"It was certainly not the intention of those who had devised this system of Minorities protection to estab-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lish in the midst of a nation a community which would remain permanently estranged from national life. The object of the Minority Treaties was to secure for the Minorities that measure of protection and justice which would gradually prepare them to be merged in the national community to which they belonged."

Speaking at the League Council on December 9, 1925, M. Dendramis, representative of Greece, said:

"A perusal of the Treaties showed that the Minorities concerned were racial, linguistic and religious Minorities. The authors of the Treaties had not intended to create groups of citizens who would collectively enjoy special rights and privileges; they had intended to establish equality of treatment between all the nationals of a State. If privileges were granted to the Minority in any country, inequality would be created between this Minority and the Majority: the latter would be oppressed by the Minority, and it would then be the Majorities question which would have to engage the attention of the League of Nations."

These extracts should suffice to show that the communal decision of the British Cabinet has sought to do that which the League of Nations strove successfully to avoid in its Minorities Treaties, and has avoided doing that which the League had in view.

Europeans in general, particularly those of the Anglo-Saxon breed, consider Asiatics as less civilized—if civilized at all—than themselves and less able to follow political principles of the right kind. But Asiatics can grasp and follow correct principles. Let me give an example. In "Prabasi," a Bengali magazine, Rabindranath Tagore has written in the course of an account of his travels in Persia and Iraq:

"In various countries of the world it has been held that it would not do for communal religion or creed to occupy all spheres of human life and activities. At a farewell dinner given to a high British administrative officer in Palestine, he said: 'Palestine is a Mahommadan country, and its government should, therefore, be in the hands of the Mahommadans, on condition that the Jewish and Christian minorities are represented in it.' Thereupon Haji Emin El-Huseini, the Mufti of Jerusalem, replied: 'For us it is an exclusively Arab, not a Mahommadan question. During your sojourn in this country you have doubtless observed that here there are no distinctions between Mahommadan and Christian Arabs. We regard the Christians, not as a minority, but as Arabs."

The words of the British officer and the Mufti's reply thereto have been given in English by the poet and reproduced above. The remaining portion of the extract has been translated from the Poet's Bengali article in "Prabasi."

The Mufti could detect the British officer's conscious or unconscious adherence to the *divide et impera* maxim. In relation to India, Britishers count upon the bulk of Mussalman Indians not perceiving, or not opposing, even if perceived, the adherence to any such maxim.

Hindus never demanded Special Rights

It has been already observed that the Premier's anticipation that the Decision is likely to be criticized by every community purely from the point of view of its own complete demands, may put critics on the wrong track. Quite irrespective of whether the Decision is just or unjust or partial to this community or group or that, it has been shown that it is a very baneful one. As regards the demands of the communities, the public have to be reminded and should bear in mind that the Hindu Community as a whole never demanded any special rights and treatment for itself. In the Hindu Mahasabha's statement on the question of constitutional reforms, issued in March, 1931, by its Working Committee and confirmed at successive sessions of the Mahasabha, it is written: "The Hindu Mahasabha desires to point out that it has throughout and consistently taken up a position which is strictly national on the communal issue." The Hindus of India as a whole or the Hindus of any particular province have protested only when the national democratic ideal has been or has been likely to be departed from and any other community or communities favoured at their expense. At this stage also, therefore, my criticism of the Decision so far as the Hindus are concerned, is not that the Hindus have not got any special rights or treatment, for they claimed none, but that their interests and the interests of all Indians have been sacrificed primarily in the interests of the British rulers and merchants and secondarily in the interests of the subservient sections of other Indian communities to be used as tools in the hands of the Britishers.

Multiplication of Electoral Compartments

The largest number of religious communities, classes, and interests for which separate electorates have hitherto been formed according to the Montagu-Chelmsford reforms, is ten in Madras and less than ten in the other Provinces. It seems, in the opinion of the British Cabinet, constitutional advance connotes further multiplication of watertight electoral compartments. For, according to their new "communal" scheme, there are to be in the Provinces eighteen separate electorates of the following descriptions: General male, General female, Muslims male, Muslims female, Europeans, Anglo-Indians male, Anglo-Indians female, Sikhs male, Sikhs female, Indian Christians male, Indian Christians female, Landholders, Commerce Industry Mining Planting European, Commerce Industry Mining Planting Indian, Universities, Depressed Classes, Backward areas, and Labour. All these 18 electorates are not to be constituted in all the Provinces, but most of them are to be formed in most Provinces.

Will the Millennium ever dawn?

The Montagu-Chelmsford reforms were ushered in with the promise that at the end of ten years, there would be a revision. Those who have boundless faith in the perfectibility of British political human nature expected something like the millennium at the end of that decade. Here in the present Communal Decision is a foretaste of that millennium. The Communal decision now given contains a similar promise to the effect that:

"Provision will be made in the constitution itself to empower the revision of this electoral arrangement (and other similar arrangements mentioned below) after ten years, *with the assent of the communities affected*, for the ascertainment of which suitable means will be devised."

Were the words I have italicized above written with the draftsman's tongue in his cheek? It would be a rather tough job to get people fed and fattened on communal fare, to vote for the stoppage of such diet. If some classes are given a "privilege", why should they agree to give it up at the end of ten or even fifty years? Therefore, the apparently temporary arrangement would really turn out to be permanent if, of course, the domination of British Imperialists be permanent.

I have been trying to keep my mind undisturbed by the Decision; but I confess this fresh promise of revision after ten years has frightened me. What additional number of watertight communal compartments may a decade hence! But I find solace

the thoughts that most probably I shall not live till ...and that sufficient unto the day is the evil thereof. ...over, the young women and men of today who will ...older by that time have stronger nerves than mine ...withstand mental and moral shocks.

If, as in the case of the Depressed Classes, so in ...se of the Muslims, Sikhs, Europeans, etc., it had been ...ided that their separate representation by special ...stituencies "shall come to an end after twenty years," ...t earlier, with or without their assent, it would have ...n an incontrovertible proof of the British rulers' ...re solicitude for constitutional progress and national ...darity in India.

Positive Name Better than a Negative One

The Montagu-Chelmsford "constitution" gave the ...e of "non-Muhammadan" to all non-descripts like ...Aborgines, the Hindus, Jains, Buddhists, Zoroas-...ans, Jews, Brahmos, etc. The separate electorate to ...formed for this motley crew according to the latest ...mmunal scheme is to be called "General." For one ...ing, a positive name is better than a negative one. ...d one may hope that, in course of time, even Moham-...dans may not object to come under the category ...General", but it is not probable that very many among ...m would ever agree to become "non-Muhammadan." ...ere may be also a quite unintended compliment to the ...dus, the most numerous community in the group, ...the use of the word "General." For, it means: "com-...tely or approximately universal; including or affecting ...or nearly all parts, not partial, particular, local, or ...tional." And it is really a fact that it is the Hindus ...o have striven more than others for the political ...ancement of the whole nation, which fact as well as ...ir relative strength is indirectly proved by the un-...guised disfavour shown to them by the powers that ...This hostility reminds me that, down the ages, from ...ancient times, the Hindus have gathered new strength ...r even each conquest or subjection by alien peoples. ...these modern days also they should be able to weather ...storm. But for that they must set their own house ...order by radical well-thought-out reforms to achieve ...ganized social solidarity.

Anxiety to Placate Muslims

It is stated in the scheme that

"It is possible that in some instances delimitation ...constituencies might be materially improved by slight ...iations from numbers of seats now given. His ...jesty's Government reserve the right to make such ...ght variations for such purpose, provided they would ...t materially affect the essential balance between the ...mmunities. No such variations will, however, be made ...the cases of Bengal and the Punjab."

The anxiety to keep the communalist Mussalmans ...ated is quite obvious in the assurance given here ...t Muslim preponderance will not be interfered with ...Bengal and the Punjab. The same anxiety is dis-...rnible in the sentence:

"His Majesty's Government consider that the com-...sition of an upper house in a province should be such ...not to disturb in any essential the balance between ...mmunities resulting from composition of a lower ...se."

Lest anybody should suspect that the communalists ...y lose in the composition of the legislature at the ...ntre what they have gained in that of the provincial ...islatures, Government take care to state in paragraph ...that "they will, of course, when considering the ...mposition (of the Central legislature,) pay full regard to the claims of all communities for adequate representation therein." This they have done, as the White Paper proposals relating to the Federal Legislature show.

Figures of the seats for different constituencies have been given in the decision for the whole existing province of Bombay, as well as for Bombay without Sind and for a separate province of Sind, if and when constituted. This has not been done for Bihar and Orissa.

It would be idle to speculate what would have happened if the bulk of the Oriyas had professed Muhammadanism.

Muslims Favoured at the Cost of Hindus; and Europeans at the Cost of Both

The Muslim population form a majority in three of the existing provinces, namely, Bengal, the Punjab and the North-West Frontier Province. In the last province alone the Hindus get some weightage. But as its legislature is to have only 50 seats, owing to its population being small—less than that of many single districts elsewhere, and out of this 50 Hindus and other non-descripts combined are to have only 9, this weightage does not affect the absolute Muslim preponderance in the least. They have gained in the two other provinces. In the Punjab they get 86 seats as Muslims in a house of 175 seats, and also 2 of the landholders' seats, and the one Tumandar (the Tumandars are all Muslim) seat will go to them. Hence a majority of seats is assured to them. It is also probable they will be able to capture one or two Labour seats. In Bengal the Muhammadans get as Muhammadans 119 seats in a house of 250. In this province 5, 5, 2, and 8 seats have been assigned to Landholders, Indian Commerce, Universities and Labour respectively—total 20 seats. If, as is very probable, Muslims can capture only 7 seats out of these 20, they will be a majority by themselves. In any case, they are assured of a predominant position by combining with the Europeans and Anglo-Indians.

Wherever the Muslims are in a minority, they either retain their present large weightage or obtain more. The Hindus and others included in the General constituency are in a minority in the two major provinces of the Punjab and Bengal. Far from getting any weightage in either, in both they get less than the number of seats which could have fallen to their lot in proportion to their numerical strength. It is true the Muslims also in these provinces get a little smaller number of seats than their numerical proportion in the population. But in order to give weightage to Europeans, Anglo-Indians, etc., more seats have been taken away from the Hindus and others of the General constituency than from the Muslims. But Muslims should bear in mind that what they have thus lost has gone to pamper their friends, the Europeans, who have made them their cat's-paw.

Bengal Hindus Rendered Impotent

The position of the Hindus and other General constituency electors in Bengal has been made one of utter impotency. They have got only 80 seats in a house of 250 seats out of which 30 will go to the depressed classes. Assuming that the Depressed Class representatives will side with the other Hindus and that the Hindus, etc., are able to capture all the 20 seats given to Labour, Landholders, Indian Commerce and Universities, even then they will have only 100 votes at their command in a house of 250. Yet, so far at least as Bengal is concerned, it is the Hindus who have striven most for political progress, as well as for the social, cultural, educational, and industrial advancement of the province.

It is noteworthy that, though the Moslems and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian Christians also have their "untouchables" and depressed classes, these two communities have not been obliged to give any separate seats to their depressed sections. Mr. MacDonald's philanthropy is reserved only for the Hindu Depressed classes!

According to the existing Montagu-Chelmsford constitution, the Bengal Hindus have 40.3 per cent of the seats and the Bengal Muslims 34.2 per cent. In 10 years the Hindu Bengalis have become politically so backward as to deserve only 32 per cent of the seats in the new constitution and the Muslims have made such astonishing political progress as to get 47.6 per cent! The British Cabinet professed great solicitude for an agreed settlement. But such is their respect for agreed solutions that they have done away with the agreed Lucknow Pact without consulting the parties!

Hindus to Pay and Muslims to Spend

The very great weightage given to Europeans have been sought to be defended—particularly in Bengal, on the ground of their "stake in the country." But in Bengal 'the Hindus' "stake in the country" is very much greater than that of the Muhammadans, as the Hindus pay more than seventy per cent of the total revenues of the Province. But as they are politically obnoxious, they do not get the benefit of the "stake in the country" argument. Hence in Bengal the Hindus are to pay and the Muslims to spend.

In Bengal the total number of the European, Anglo-Indian and Indian Christians is 180,572 out of a total population of 50,122,150, or about one-third (1|3) per cent of the total population. But they get between them 31 seats, Europeans 11, Anglo-Indians 4, Indian Christians 2 and European Commerce 14), or about thirteen per cent of all the seats. This is fair distribution with a vengeance! Of course, the Indian Christians get very little; it is the European Christians, who are about 25,000 in number, who get 25 out of the 31 Christian seats. The Europeans in Bengal are one-two-thousandth (1|2000) of the population, but get one-tenth of the seats!

In Bengal the Buddhists (315,801) and the Animist Aborigines (535,656) far outnumber the Christians. It is really lucky that it has not been attempted to cut them off from the main current of national endeavour by giving them separate representation. Nevertheless, that such representation has not been given to them is an unmistakable proof of the fairness of the distribution of seats made by the British Cabinet!

CONGRESS WORKING COMMITTEE AND THE DECISION

Sitting on the Fence does not make for the Progress of Humanity

It is necessary now to consider the Congress Working Committee's position of neither accepting nor rejecting the Communal Decision while at the same time condemning it as anti-national and unsatisfactory. One of the reasons why the Committee has adopted this neutral attitude is that "the different communities are sharply divided on the question."

When Abraham Lincoln became President of the United States of America, he became theoretically the supreme representative of the slave-holding Southern States of the Union as well as of the anti-slavery Northern States. But, because the States were "sharply divided on the question of" slavery, did he say, "in view of the division of opinion," that he "can neither accept nor reject" slavery? Did he neither try nor not try to liberate the slaves? History tells that he struck a blow and freed the slaves. No cause espoused by anyone who dared, if need be, to be in the minority of one with Truth and Right on his side, has ever failed.

The cases are, no doubt, not parallel. But I have cited the example of what Lincoln did only to remind the public that on numerous memorable occasions sitting on the fence has not made for the progress of humanity. There is this much of resemblance between slavery and the Communal Decision that, as the United States of America could not possibly have remained united and become and remained really free if slavery had not been destroyed, so India cannot possibly become and remain united and cannot possibly become and remain free unless the Communal Decision is upset. That decision is not only the result but would also be, if not unsettled, the cause of the perpetuation of our subjection. That decision is objectionable, not mainly or merely because it gives Hindus less seats than they are entitled to on the basis of population or any other basis, but also because it is anti-national, anti-democratic, makes for the disruption and disintegration instead of the unification and solidarity of the communities and classes inhabiting India.

Therefore, Congress as a national organization ought to condemn and reject this wholly anti-national decision in unequivocal terms, even at the risk of having a smaller number of Hindu, Muslim, Christian, Sikh or other adherents. In the long run it is not number but strict adherence to right principles which tells.

Hope of Enlisting Muslim Support Not Fulfilled

The main reason which appears to have weighed with the Committee is that if they condemned the decision outright Muslim Congressmen would have no chance to enter the Assembly. Hence to give them a chance, the Working Committee have adopted a non-committal attitude. I shall be glad if this attitude helps Nationalist Muslim candidates for the Assembly. But will it? In any case, the Nationalist Muslims should feel grateful to the Working Committee for the friendly gesture made towards them by temporarily shelving principle.

Had the Working Committee rejected the Communal Decision outright, communalist Muslim candidates could have told their electors (all Mussalmans, mostly of the communalist variety, and supporters of the Communal Decision), "Do not vote for Muslim Congressmen, for Congress has not accepted but has rejected the Communal Decision." In spite of the Working Committee's non-acceptance and non-rejection of the decision, Communalist Muslim candidates may, however, now tell their constituencies, "Do not vote for Muslim Congressmen, for Congress has not accepted the Communal Decision. It is true that it has not rejected it either. But those who are not definitely with us are against us." Is there much practical and effective difference between these two probable exhortations to Muslim constituencies on the part of communalist Muslim candidates for the Assembly?

Nevertheless, I shall be sincerely glad if the appeals of Mr. Sherwani, Mr. Asaf Ali and other Nationalist Muslim leaders are largely responded to by Muslims and if in consequence large numbers of Muslims become loyal members of Congress and Nationalist Muslim candidates succeed in entering the Assembly. The strength of the Nationalist group in the coming Legislative Assembly depends on the success of the Nationalist Muslim candidates to some extent. If they can outnumber the Communalist Muslim M. L. A.'s—if in any case the Muslim and non-Muslim elected Nationalist M. L. A.'s combined can clearly outnumber any other elected groups combined, that would be some definite and tangible proof of the true fact that Nationalists

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

present the majority of politically-minded Indians, even ording to the voters' rolls prepared by the bureau- , and that therefore Nationalist condemnation of White Paper is really practically entire India's demnation.

But if the Nationalist group in the Assembly be not large as Congressmen of the Swarajist mentality anti- te, the Working Committee's non-committal attitude the communal question would prove fruitless.

As the two biggest Muhammadan organizations, the All-India Muslim League and the All-India slim Conference, have supported the White Paper and Communal Decision the Congress Working Committee's e of enlisting greater Muslim support by its neutral itude has not been fulfilled.

Award would not Necessarily Lapse with White Paper

The Committee observe:

"The White Paper lapsing, the Communal Award st lapse automatically."

Not necessarily. For, it is only with regard to the mmunal Decision that Sir Samuel Hoare, cross- mined by Sir N. N. Sircar, said that "Government d said their last word;" that is to say, though other rts of the White Paper might be altered, the Com- nal Decision was a "settled fact." Of course, in itics there is no settled fact—other settled facts have en unsettled. But the unsettling has required long, nuous and immense struggle. Hence, the words of e Working Committee's resolution, "The White Paper sing, the Communal Award must lapse automatically," pear rather too easy-going. All the parts of the ite Paper do not so hang together that either all of m must be scrapped or all of them must be kept ct. It is quite feasible to scrap some, keep others act and alter the rest. And how is the White Paper g to lapse, what is the exact meaning of this lapsing, d who is to bring about this lapse and how? I con- I do not understand all this. The White Paper posals are not a house of cards to be blown down a Working Committee resolution or by an adverse olution carried in the next Legislative Assembly.

Working Committee One with the British Premier in Expecting the Improbable

The Committee say:

"The Congress claims to represent equally all com- nities composing the Indian nation and, therefore, in w of the division of opinion (on the Communal cision), can neither accept nor reject the Communal ard as long as the division of opinion exists."

Here the Working Committee expects something as probable, if not impossible, as the British Premier d Ministry seemed to do. The latter demanded an reed settlement as a solution of the communal blem. But as the so-called delegates to the so-called ound Table Conference (for which the British Govern- nt had selected as "representatives" of the Muslim mmunity only inveterate communalists and also from e Hindu and Indian Christian communities some in- erate communalists as their "representatives") could as was natural under the circumstances, arrive at present such an agreed solution, Mr. MacDonald his Communal Decision, miscalled an Award.

Of course, Mr. MacDonald wanted an agreed solu- from persons many of whom could never possibly knowing full well that there would not be any agreement and that, therefore, he would be able impose his will on Indians under the Communal Award as they had failed to agree among themselves, he had to give his decision perforce. On the contrary, the Working Committee really want an agreed solution from motives of the sincerest patriotism. I should be delighted if their optimism justified itself. But without in the least pretending to be a prophet, which I certainly am not, I doubt whether a time would come—at least in the near future—when "the division of opinion" on the Communal Decision would completely disappear from among all the different communities. So the Committee may have to keep up their non-committal attitude for an indefinite length of time. In the present state of the human group-mind it is too much to expect that those who have got an excessive advantage would willingly give it up, or that those who have been humiliated and deprived of their just dues, which they had earned by their ability, public spirit, sufferings and sacrifice, and who had been deprived of facilities for serving their country in due measure, would willingly submit to such humiliation, injustice and deprivation.

Departure from Nationalism

I am fully conscious that Congress has to tackle a very difficult problem and I recognize that Congress leaders are making sincerely patriotic efforts to solve it. Perhaps an absolutely national solution is not at present feasible. But the solution which, though falling short of the fully national view-point, should be acceptable to the Congress, must possess at least the minimum of the essentials of a nationalistic solution. Perhaps the leaders would cogitate and deliberate to determine this essential minimum. May it be hoped that this minimum will include joint electorates? Mahatma Gandhi fasted, unto death if needed, partly to bring about joint election of representatives by "depressed" and "upper" class Hindus. But now he appears to be prepared to give up the principle of joint election by Hindus, Muslims and others, for saving or securing the (nominal?) adherence to the Congress of a small number of Muslims.

In July, 1931, the Congress Working Committee, while deviating to some extent from pure nationalism by accepting the principle of reservation of seats for minorities, did not give up joint electorates. Is there going to be a still greater departure from nationalism pure, unadulterated and undiluted?

The Committee observe:

"……the only way to prevent the untoward consequences of the Communal Award is to explore ways and means for arriving at an agreed solution and not by an appeal on this essentially domestic question to the British Government or any outside authority."

I fully appreciate this self-respecting attitude. Moreover, if the communities concerned can produce an agreed alternative to the Communal Decision, Mr. MacDonald is pledged to accept it—though imperialist politicians do not consider their pledges inviolable. So, if any Indian party appealed to the British Government, an agreed solution would strengthen the appeal. Hence, I am in favour of trying to have an agreed solution.

But I am afraid, Congress leaders in their anxiety to secure surface unity may be led to accept an alternative to the Communal Decision between which and that decision there may be as much difference as between tweedledum and tweedledee.

By "any outside authority" perhaps the League of Nations is meant by the Congress Working Committee. But that authority, perhaps anticipating the attitude of the Congress Working Committee, has already neither accepted nor rejected the Communal Decision!

Will the Constituent Assembly Solve the Problem?

A part of the Working Committee's resolution runs as follows:

CC-0. Prof. Satya Vrat Shastri Collection. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The only satisfactory alternative to the White Paper is a constitution drawn up by a constituent assembly elected on the basis of adult suffrage, or as near it as possible, with the power, if necessary, to important minorities to have their representatives elected exclusively by electors belonging to such minorities."

The mere fact that a constitution is drawn up by a constituent assembly, and not by the British Government, cannot necessarily make it satisfactory or more satisfactory than the White Paper constitution. To be satisfactory, it must in the first place be national—at least fundamentally and essentially so, it must not be anti-national, and in the second place, it must fulfil many other requirements which need not be specified. Considering the mode of election of the constituent assembly foreshadowed in the resolution, it is quite possible for a constitution, to be drawn up by it, to be vitiated by anti-national communal bias as the White Paper is—to a less or equal or greater extent. For, as the resolution concedes to important minorities the unnational method of separate exclusive communal election of their representatives to the constituent assembly "if necessary," that "necessity" is sure to arise—some community or communities are sure to ask for it and to get it; and representatives of those communities elected in that way are sure to insist upon the inclusion of separate and exclusive communal election of communal representatives in the constitution itself which is to be drawn up by the constituent assembly. And either the majority community and the Congress will have to yield to this communal demand, or there will be no agreed constitution; for, according to another part of the Working Committee's resolution, "the Congress is pledged . . . to reject any solution which is not agreed to by any of the said parties."

What are "Important" Minorities?

In our opinion, therefore, the passage quoted above from the resolution should have ruled out the possibility of any anti-national constitution being drawn up by the constituent assembly by laying down that the constitution must not be unnational or anti-national in any fundamental or essential respects. And the resolution should certainly not have started with a flagrant departure from national lines and principles by indicating its readiness to yield to the communalistic clamour for the exclusive and separate election of communal representatives. And supposing, without admitting, that minorities should have this "right," why are only "important" minorities to have it? What is the standard of importance? Is it not true that the interests of "unimportant" minorities are more likely to be neglected than those of "important" minorities?

"Among other things it will be the duty of the constituent assembly to determine the method of representation of important minorities and make provision for otherwise safe-guarding their interests."

Why is it assumed here that the method of representation of important minorities may or must be different from that of the majority and unimportant minorities? In the constitution of no civilized and modern country that we are aware of, is such a distinction made between the methods of representation of maiorities and unimportant and important minorities. In the League of Nations Minorities Treaties, which embody the political wisdom of most of the leading nations of the world, no such distinction is recognized. The United States of America is not in the League, it is true. But it, too, does not recognize such a distinction. Assuming, however, without admitting, that minorities require special treatment, the Working Committee's resolution should have definitely shut out even the suggestion or consideration of separate communal electorates, which are unnational, the special treatment being confined to the reservation of a number of seats for the minorities for a definite period or to a system of proportionate representation, or both, and the like.

Minorities Have No Separate Political Interests

As regards safe-guarding the interest of minorities, the League of Nation's Minorities Treaties do not recognize that any minority group has any separate political and cognate interests, the only minority interests recognized and safe-guarded are those relating to their separate languages, if any, separate religions, if any, separate personal laws, if any, and the like. The Congress practice should be like that of the League of Nations. To recognize the existence of separate political and cognate interests of minorities and in consequence to give them separate sectional representation by separate electorates is to plant a "state within a state" to prevent which, according to Mr. Austin Chamberlain, was the object of the League of Nations' Minority Treaties, and should be the object of all Nation-builders.

Does the Congress Represent All the Communities?

The Working Committee proceed to observe:

"Since, however, the different communities in the country are sharply divided on the question of the communal award, it is necessary to define the Congress attitude on it. The Congress claims to represent equally all communities composing the Indian nation and, therefore, in view of division of opinion can neither accept nor reject the communal award as long as division of opinion lasts."

No doubt, the Congress represents all communities in the sense that among Congressmen there are members of all communities or in the sense that members of all communities are eligible for membership of the Congress provided they accept its principles and "creed" and fulfil other conditions. But it can hardly be admitted that it represents all communities equally.

Congress Should Stick to its Principles

But from the fact that it represents all communities it does not necessarily follow that it can neither accept nor reject anything on which opinions are divided. On the contrary, it is or should be the privilege and the duty of the Congress to find out what is National and to inculcate it, never minding whether that would increase or reduce the number of its adherents. All sections of the Hindus do not support the anti-untouchability principles and activities of the Congress, and numerous Mussalmans are opposed to it for reasons which need not be stated. Nevertheless, it has never been said that the Congress can neither accept nor reject it. Similarly, in no community is there unanimous or practically unanimous adherence to the cult of the charkha. But the Congress enjoins the production and use of khaddar.

The Congress Committee reject the White Paper. But large sections of the Muslims have accepted it. Therefore, the Committee should have neither accepted nor rejected it, for Hindus are against it.

We have pointed out before that if the Congress wants to condemn and reject the Communal Decision only when all communities are against it, it will have to wait for an indefinitely long time, before which that Decision may perhaps break down owing to its innate mischievous, vicious and iniquitous character.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

What Course Congress Should Follow

In the meantime, being part of an official scheme, it to be given effect to and go on producing "untoward sequences," unless it is effectively opposed. One way to do so would be for the Congress to boldly denounce and call on all communities, including as many truly onal Muslims as possible, to condemn, oppose and ot it. Such action on the part of the Congress will e the further indirect beneficial result of enabling public to judge who are the genuine Nationalist slims and who are merely liaison officers of the com-alist Mussalmans. As in the opinion of the Congress king Committee, "Judged by the National standard Communal Award is wholly unsatisfactory besides g open to serious objections on other grounds," the gress would have ample justification for adopting course suggested above.

The other method of effectively opposing it, which been suggested in the resolution, viz., to arrive at agreed solution of the communal problem, has been dealt with already and will be referred to again. The resolution proposes neither to accept nor to ect the Communal Decision so long as there is division opinion on the question. We are afraid this division opinion would last very much longer than the Working mmittee has perhaps anticipated; and that for very d reasons. Observers of political conditions in India nnot have failed to conclude that in self-defence British perialists must go on favouring the growth of sectional itions and the rise of sectional claims. The greater National self-consciousness in India the greater the ength of Nationalism, the greater must be the ciality shown by British imperialists to particular ions of the people which are open to such treatment. ce, as our Nationalism grows more vigorous, pro-nced and articulate, the direct and indirect support sectionalism and communalism given by British perialists must grow greater. For this reason, the gress should not expect communalism to dwindle d die a natural death in the near future. The Con-ss must directly, definitely, promptly and persistently it. For preserving or securing the allegiance of the tionalists and separatists of any community the gress cannot make higher bids than those of the itish imperialists. If Congress concessions to them reased in arithmetical progression, the Britsih perialists' favours would be showered down upon them geometrical progression.

The Committee state:

"No solution that is not purely national can be pounded by the Congress. But the Congress is dged to accept any solution falling short of national ich is agreed to by all parties concerned and con-ely to reject any solution which is not agreed to by of the said parties."

Whether in the future any solution that is not purely tional can be propounded by the Congress or not, we not know. But in the past the Congress has either pounded or accepted or been a party to solutions at are not purely national; e.g., the Nehru Report, rvation of seats for minorities, etc.

Illogical Position of the Congress

Let us try to be a little logical. The resolution says the Congress is pledged to reject any solution which not agreed to by any parties concerned. Now the mmunal Decision is a solution of the Communal blem and it is not agreed to but opposed by the Sikhs a man and also by innumerable Hindus and others: y not then reject it outright? Perhaps it is to have the privilege and the honour of not being so rejected, because it is not an Indian but a British solution!

Suppose the proposed constituent assembly arrives at substantially the same solution as or a worse solution than the Communal Decision, the Congress must then, according to this resolution of its Working Committee, accept it!

The Committee proceed:

"It is, however, obvious that the only way to prevent the untoward consequences of the communal award is to explore ways and means of arriving at an agreed solution and not by any appeal on this essentially domestic question to the British Government or any other outside authority."

I have already commended this self-respecting attitude of the Congress. I do so again. But I beg leave to conclude by putting a supposition stated above, in an interrogative form. If the agreed solution be more communalistic than national, will the Congress accept it? Are there no such things in politics as right principles? Is it true that the bigger the crowd of supporters—particularly of communalistic supporters—of any scheme, method, or opinion, the better it is?

Change of Front by Nationalist Muslim Leaders

The Nationalist Muslim leaders had at first condemned the Communal Decision. Had they adhered to their first thoughts, which they have not, the Congress Working Committee would not most probably have adopted a neutral attitude. I present here some specimens of Nationalist Muslim condemnation of the Decision, which is different from their present attitude.

I shall first give the opinion of the late Sir Ali Imam. Presiding at the All-India Muslim Nationalist Conference at Lucknow on the 18th April, 1931, he said:

"Today's Conference represented Muslim Nationalists, in other words, people who were not wedded to a scheme of separation. They had been simply flooded with messages from every corner of India from different leaders who one and all insisted on the basic principle of joint electorates."

"Separate electorates connote the negation of nationalism. Political problems are but a reflex of social forces. If you erect an iron wall between community and community in their Politics, you destroy the social fabric, and day-to-day life will become insupportable if you insist on building political barriers. Nationalism can never evolve from division and dissensions."

At this Lucknow Conference Dr. Ansari moved the principal resolution the last paragraph of which stated that "the Nationalist Muslim Party" "strongly holds" the principle of "joint electorates." In moving the resolution Dr. Ansari said, in part:

"This is not the occasion to expatiate on the absolute necessity of joint electorates for the growth of a united nationhood. I am speaking to Mussalmans just now, and I wish to tell the Muslim community through you that, apart from wider national considerations, the insistence on separate electorates would prove suicidal to the continuance of the Mussalmans in this country as a political and cultural force of any significance."

Presiding at the All-Bengal Muslim Nationalist Conference at Faridpur, on June 27, 1931 Dr. Ansari repeated his previous views.

The principal resolution passed at this Conference insisted on "joint electorate with adult suffrage." In supporting this resolution Mr. T. A. K. Sherwani said:

"The advocates of separation wanted to erect insurmountable barriers between Muslims and other communities. To this the nationalists could never consent. The evil effect of separate electorates was apparent from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the fact that the spirit of separatism was penetrating among the Muslims themselves. Votes were being canvassed on the basis of a candidate being a Mirza or a Pathan, Qureshi or Ansari, Shiah or Sunni."

Dr. Ansari, in the course of a speech at the United Provinces Nationalist Conference at Meerut, on 20th July, 1931, stated that joint electorates were the second basic principle of the scheme he stressed.

Dr. Mahmud in his presidential address at the same Meerut Conference stated that:

"The programme of separate representation has killed the spirit of competition. It has arrested the natural and healthy growth of public spirit among the Mussalmans. Common electorates, on the other hand, will draw out the best and the noblest that is in the Muslim society."

Malik Barkat Ali, Chairman of the Reception Committee of the Punjab Nationalist Muslim Conference held at Lahore, on the 24th October, 1931 said with reference to the question of separate electorates:

"We feel that in the circumstances of today and in the India of the future, they should have no place whatever."

The Bengal Council devoted the whole of August 2, 1932, to discussing Mr. Abdus Samad's resolution in favour of joint electorates and ultimately adopted by 47 votes to 32, Mr. Tamizuddin Khan's amendment:

"That the Government be pleased to inform the proper authorities concerned that in the opinion of this Council the system of separate electorates in the future constitution of the country should be replaced by a system of joint electorates."

Mr. Asaf Ali concluded a long statement issued to the Press on June 14, 1932, from New Delhi thus:

"The simplest formula they (the Muslims) should stick to is 'joint electorates, no reservation, no weightage, no special constituencies and adult suffrage, or the lowest qualification for franchise to enable the bulk of the population to get representation, and if any formula for minorities is insisted upon by minorities in different provinces it should be uniform for all minorities.' Any deviation from it would complicate both present and future issues, and would work to the detriment of both the country and even the Muslim community."

The principal resolution at a meeting of the executive committee of the Bengal Nationalist Muslim party held in August, 1932, under the presidentship of Chaudhury Mozzem Hossain recorded

"Its emphatic protest against the Communal Award recently given by the Prime Minister in consultation with the British Cabinet on the following among other grounds: (a) It recognizes the principle of separate electorates, which is fundamentally opposed to responsible government. . . . . ."

Maulana Abul Kalam Azad said in the course of an interview to the Free Press in Calcutta on September 1, 1932:

"The Communal Award of the Prime Minister is the most dangerous thing that could happen to Indian Nationalism. It has set one community against the other, without giving any tangible benefit to any save the Europeans."

Dr. M. A. Ansari, President of the Nationalist Moslems, said in a recent interview, published in the 'Hindustan Times' of the 13th March, 1934:

"The Communal Award is the result of the deliberate choice of a particular kind of Round Table Conference personnel to render a settlement impossible and thus impose an outside solution."

It has been said that if the Congress had rejected the Communal Decision, it would have been partizanship; for "Muslims in general seem to like it." Now, in the opinion of the Congress Working Committee the Communal Decision is a bad thing—it goes against Congress principles. So it comes to this that it is partizanship to reject a bad thing, if some people like that bad thing!

But let it be granted. Is it only the rejecting of it that would have amounted to partizanship? The condemnation of the bad thing—I mean the Communal Decision is not partizanship!

Position of Pt. Malaviya's Nationalist Party

It has been said, whereas the Congress wants to replace the Communal Decision by an agreed solution, Pandit Madan Mohan Malaviya and his party want to get rid of the Communal Decision by appealing to the British Government or through its instrumentality. This is not a correct description of the position. By its attitude of non-acceptance and non-rejection of the Communal Decision of the British Government, the Congress give it some quarter. The new party, by its programme of fighting the Decision in and outside the legislature does not give it any quarter at all.

Both by deed and word, before and after the holding of the Conference, Pandit Malaviya has shown that he is at least as much for an agreed solution of the communal problem as anybody else. I do not know that anybody has worked harder than or as hard as he, more earnestly than or as earnestly as he, in connection with the Unity Conferences in recent years. The failure of the conferences was due to Sir Samuel Hoare's making higher bids for Muslims' allegiance. The Nationalist Party's programme includes the arriving at a Communal settlement as one of the items.

As regards Government's possible final role in the Communal settlement, neither the Congress nor the Congress Nationalist Party are likely to be able to effect the settlement without the agency or instrumentality of the Government. Neither the Congress nor the Congress Nationalist Party have at present any revolutionary aims. Neither can or do say, "when we arrive at an agreed solution, we will give effect to it ourselves, because then the Government will be *no nest*, or paralysed, or superseded." When either or both have arrived at an agreed solution, they will have to say to the British Government in effect: "You said that the Communal Decision could be replaced only by an agreed solution. Here is the agreed solution. Accept it and give effect to it." If then that Government does not honour its pledge, the people of India must think of some other means of giving effect to its will.

So far as I am concerned, I must say that I do not believe that there can be any agreed settlement of the communal problem so long as there is selfish British domination, so long as there exists its effective power to bestow "favours" (let me call them such), and so long as there are major parties or there is a major party to accept these "favours" and refrain from taking part in a united national struggle for freedom.

Congressmen are saying that their proposed constituent assembly is a better means of registering the people's will and obtaining a desirable constitution framed by the people than the Congress Nationalist Party's proposed national convention. As the object of both the gatherings is the same and as I care more for realities than for mere names, I cannot give preference to either as a nostrum for curing the National Malady. Both the parties seem to take it for granted that the British Government will be very obliging, will give them all facilities for calling a thoroughly representative

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

popular gathering, and then immolate itself at the altar of the Indian National Will. But, perhaps because I am an arm-chair politician, I am unable to make any such assumption.

Examples of Government's Favouritism

I have already more than once referred to the favouritism shown to some communities and the unjust treatment accorded to some other communities in the Communal Decision and in the White Paper proposals supplementary thereto. Let me give a few concrete illustrations.

The provinces of Madras, U. P., Bihar and Bengal contain a population of more than 17 crores and 65 lakhs. This is more than half the population of India minus Burma. In the Federal Legislature, this majority is to get 72 seats in the Upper Chamber and 141 seats in the Lower. The population of the rest of India, forming the minority, is to get 178 seats in the Upper Chamber and 234 seats in the Lower!

In British India minus Burma the "general" constituency consists of 18,42,21,834 Hindus and others, out of a total population of 25,66,27,138. They are more than two-thirds of the population. They are to get 124 seats in a Lower House of 375, *i.e.*, less than half the seats!

The total number of seats in the provincial Legislative Assemblies is 1585. In the provinces, minus Burma, Hindus number 17,63,59,738 out of a total population of 25,66,27,138. In proportion to their numbers, they ought to get 1,088 seats out of 1,585. But they are to get only 839 (on the assumption that they will get all the "General" seats), *i.e.*, 249 less than their due!

The most glaring example of "favoured community" treatment is the number of seats given to the Europeans. According to the census of 1931 the number of Europeans is only 1,68,134. But to this small number of persons seven seats have been out of the 150 in the Upper House for British India and fourteen seats in the Lower House out of the 250 for British India. It is to be borne in mind that, according to Appendix II of the White Paper, the 257.1 million inhabitants of British India are to have these total numbers of 150 and 250 seats in the Upper and Lower Houses respectively. So in the Upper House every 1 2|3 one and two-third million persons get one seat, and in the Lower House there is one seat for a little less than one million people. But the Europeans are such supermen that only 1,68,134, of them get 7 seats in the Upper House and 14 in the Lower!

I have already said that Mussalmans are much less than one-third of the population of British India. Yet in both the Houses they have been given one-third of the British Indian seats. Excluding Burma, there are 66,478,669 Mussalmans in India. Excluding Burma again, there are 40,254,576 Depressed Class people in British India. That is to say, they are somewhat less than two-thirds of the Muslim population. But whereas in the Federal Assembly or Lower House Muslims are to get 82 seats, the Depressed castes are to get only 19; and apparently in the Upper House no seats have been reserved for them. Yet British die-hards, imperialists and officials profess great anxiety for the welfare of the Depressed Classes. Further instances of unequal treatment need not be multiplied. But it must be added that 10 seats for Labour and 9 for Women are quite inadequate.

To prevent misunderstanding it should be stated that I am against reservation of seats for any community or interest. But as the principle of reservation has been accepted by the Government, the number of seats reserved ought to have been strictly in proportion to population, without weightage.

Majority Converted into Minority

The total Population of British India minus Burma is 256,672,138, of these 177,157,035 are Hindus. Deducting 40,254,567 Depressed Class Hindus, we get 136,902,459 as the number of the "Caste" Hindus. They form the biggest group by themselves. But they alone are not entitled to the "General" seats. Parsis, Buddhists, Jains, Jews, Animists, and others share these seats with them. These latter number 91742, 342161, 408622, 17625, 4666634 and 1538015 respectively in British India. So that for the "General" seats there are altogether 143,967,258 claimants.

It has been stated above that the total population of British India minus Burma is 256,627,138. The 143,967,258 claimants for the "General" seats are thus more than half the total population of British India, Burma excluded. The 136,902,459 "Caste" Hindus alone are also more than half the total population of British India, excluding Burma. Even if Burma were included, the total number of claimants (143,967,258) to the "General" seats, would be the majority in British India. Hence they ought to have got more than half the total number of seats provided for British India. In any case they ought to have got at least half the seats. But in the Federal Assembly, out of the 250 British Indian seats only 105 have been allotted to them. Thus the majority has been converted to a minority! One of the "14 points" laid great stress upon by Muslim Indians is that by no arrangement must a majority be reduced anywhere to a minority or even an equality. Therefore justice-loving Muslims should condemn this conversion of the non-Muslim majority to a minority.

And who are the men who form this majority? They have among them the largest number of the ablest, the most public-spirited, the most self-sacrificing, and the most prosecuted fighters for self-rule in India. Verily they have got their reward in being reduced to a position of hopeless impotency in the Federal Legislature.

Princes to Get More Than Their Due

On the other hand, a few hundred Princes of India, who have not striven for Indian self-rule but who would, on the contrary, be used as tools to fight Indian nationalism, are to have 100 seats out of 260 in the Upper House and 125 seats out of 375 in the Lower, placed at their disposal to be filled by their nominees.

Even if their subjects numbering 81,237,564 had the right to elect their representatives to the Federal Legislature, they would not be entitled to more seats than the 134,967,258 claimants to the "General" seats.

That the legitimate interests of a minority should be protected goes without saying. But the best and perhaps the only way to do it, is to evoke and depend on the goodwill of other minorities and the majority. To treat a country as if it were the battle-ground of warring camps is to make it such, if it be not one, or to keep it a battle-ground for ever, if it be one. Such treatment can result only in the prevention or putting off of the growth of national solidarity.

I have already shown that the majority has been reduced in the Federal Legislature to the position of a minority. Hence my suggestion is that the safe-guarding of the legitimate interests of the majority should be one of the special responsibilities of the Governor-General.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Communal Representation Incompatible with Responsible National Self-government

I have already said that separate communal representation is incompatible with responsible national self-government. It is necessary to explain myself a little in detail.

Self-rule means that people are ruled either by themselves or by the representatives elected by them. In ancient times in very small village republics, the citizens themselves in meeting assembled could transact the business of the state and govern themselves. In our present-day really self-ruling States, the Government is "of the people and for people," but literally not "by the people," but by representatives elected by the people. But under the Communal Decision, in the Central and Provincial Legislatures the statutorily fixed majority parties will consist either of Hindus elected exclusively by Hindus, (as *e.g.*, in Madras or U. P.) or of Mussalmans elected exclusively by Mussalmans (as *e.g.*, in the Punjab or N.-W. F.) or of Mussalmans elected exclusively by Mussalmans-cum-Europeans elected exclusively by Europeans (as in Bengal). Therefore, neither in India as a whole nor in the Provinces will there be representative Self-government, but Government by statutorily fixed communal majorities, elected, not by voters of all communities, but by voters belonging to the particular communities concerned. In the Muslim-majority provinces not a single legislator of the majority party will be elected by a single non-Muslim voter and in the Hindu-majority provinces not a single legislator of the majority party will be elected by a Muslim or a Christian. And even such majority parties will not be the real rulers of the country. They will be only nominal rulers. Their "Government" will be a sham, as the real power will remain in the hand of the Secretary of State, the Governor-General, the Provincial Governors, and the foreign bureaucracy in general, known as the "Steel-frame"—an expression coined by Mr. Lloyd George.

One of the essential conditions of democratic and responsible Government is that what is today a minority party may become the majority party tomorrow by the conversion of its opponents to its way of thinking or owing to other causes. In this way all groups have an effective chance of giving the nation the benefit of their wisdom, capacity and public spirit. The changeability of the personnel of the ruling party gives the ruling majority for the time being a sense of its real responsibility to the nation, and exercises an effective check on arbitrary, irregular or corrupt methods and actions. But if a constitution makes any religious community as a community, the permanent ruling majority, there cannot be any democratic and resposible self-rule in the country, and all the advantages of such rule, pointed out above, are lost. The Communal Decision militates against the essential conditions of democratic and responsible Government, and would, if given effect to, keep India deprived of all the advantages of such Government.

Under a system of joint electorates, to whatever religious community or communities, classes, castes, interests or races the majority of the members of central and provincial councils might belong, it could be said that people of all communities had helped to elect them and were responsible for choosing them. So the members also would feel their responsibility to and would and must try to promote the interests of all the people of all these groups. But under a system of separate electorates, in some cases the majority would be elected exclusively by the Hindus, or at any rate by non-Muslims and non-Christians, in some cases the majority would be elected by Muslims, and in one province (Bengal) the majority would be either Muslims or Muslim-cum-Europeans elected exclusively by their co-religionists or compatriots. Hence each province of India would be ruled by a foreign bureaucracy (for British domination would continue) through a majority of legislators for whose election people of all groups would not be responsible and who would not feel responsible to and need not in consequence ordinarily try to promote the interests of all groups. This would be a highly undesirable state of things. It would not be self-rule or representative government. It would be rule by a bureaucracy, mostly British, in the name of a majority with whose election whole groups of people had nothing to do.

I do not lay stress on the fact that the Communal Decision has been grossly and insultingly unjust to the Hindus. For, even if it had been possible for it to be fair to the Hindus and all other communities, separate and communal and class electorates would have remained a great evil against which the nation must wage unrelenting war.

Congress Wanted to Win Over Muslims

The split in Congress ranks over the Communal Decision is to be deeply deplored. If any section of Congressmen had believed that the Communal Decision was good and necessary in the interests of India and had, therefore, parted company with those who believe it to be anti-national, anti-democratic and injurious to the interests of the Indian nation as a whole, then in that case, too, the division in Congress ranks would have been regrettable. But what adds to the painfulness of the present situation is that, though all Congressmen believe the Communal Decision to be anti-national, anti-democratic and injurious to India, yet for the sake of expediency a section of them will not agitate against it, or vote against it, if returned to the Legislative Assembly as members. The Congress Working Committee's attitude of neutrality towards the Communal Decision was evidently due to its hope—a hope which has not been fulfilled—that that would make Muslims friendly to the Congress and lead many of them to join it and also lead Muslim voters to cast their votes in favour of Muslim candidates who were Congressmen.

Principle Sacrificed to Expediency

Principle should never be sacrificed to expediency. But supposing the sacrifice of principle for the sake of expediency were justifiable, it must be shown that expediency has produced or is expected to produce the desired result. In the present case, however, the generality of Muslims have not changed their attitude to the Congress. As for voting for Congress-Muslim Candidates, Muslim voters have been asked by the two biggest and oldest Muslim organizations, *viz.*, the Muslim League and the Muslim Conference, that they should vote only for those Muslim candidates who accept and would support the White Paper including the Communal Decision.

I have said above that principle should never be sacrificed. This maxim should in particular be strictly followed by those who have declared that Satyagraha is their rule of life. Satyagraha is a Sanskrit compound word. Satya means truth and Agraha means 'strong attachment,' 'persistence,' 'insisting,' according to Apte's Practical Sanskrit-English Dictionary. Therefore, Satyagrahis should prove their strong attachment to truth by persisting in and insisting upon truth in and outside the Council Chambers.

In spite of a party's failure to achieve its object, it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

command the respect even of those who do not
long to it, if it adheres to truth and principle and
ears witness to the truth under all circumstances. But
n-persistence in and non-insistence upon its convictions
annot command respect.

OICE OF MAJORITY NOT NECESSARILY VOICE OF TRUTH.

It was said at Wardha that there would be a fight
the finish between the two Congress parties and the
sult would show which was right. But rightness and
ongness cannot be determined in that way. The
ice of the majority of voters is not necessarily the
ice of Truth and Right. Even if the candidates of
e Congress Parliamentary Board succeed in capturing
l the elective 'general' seats, that would not in the
ast show that the attitude of neither accepting nor
jecting was right.

If one nation, by successful warfare or by some other
eans manages to bring another nation under its
minance, this fact of domination does not, by its
ere existence, stand justified morally. Still, this
thod of establishing the power of one nation over
other has been employed righ through history and
still being employed by the so-called highly moral,
st and civilized nations. Successful war is still the
iterion by which masters and slaves are determined
ong nations, and the ruling nations are still accepted
erywhere as rightful rulers so long as the ruled do
t turn the table on them by successful warfare. (Such
rfare is called rebellion at first, but, when successful,
becomes war, *e.g.*, the American War of Independence).
e ethical and logical aspects of this matter need not
discussed any further here. It can surely be asserted
at the complete domination of one group of normal
man beings by another, howsoever brought about, is
ntrary to ethics and justice. Such a state of affairs is
mparable to the institution of slavery. All over the
ilized world public opinion considers slavery dead and
ried. But what is the reason that led civilized
manity to discard slavery, if not entirely, at least
the surface of things? That slaves were cunningly
iced or forcefully brought away from their own homes
d were sold often to harsh and cruel masters was one
the root causes of the disappearance of open and
knowledged slavery from the modern world. But not
l slave-owners treated their slaves with curelty and
artlessness.

Therefore, another and the fundamental argument
ainst slavery is that it lowered humanity to the level
beasts by buying and selling men against their will
d rendered the well-being and life of the slaves sub-
rvient to their masters' whims. Slaves could change
nership in the same way as cattle or dogs, and they
re deprived of the human right of free will, of self-
provement, of ideal and responsible conduct. Could
e call a thing like this moral or just? Could it enable
en the slave-owners to keep their manhood unstained?
tainted the buyer as well as the bought.

At the present time all the provinces of India are
der the British. If some one asked them, "Why are
u ruling such and such provinces," they would
swer, "Oh, we have conquered them." It is called
e "right of conquest" in the western catalogue of
ghts and wrongs. Whether such a "right" is truly
right need not be discussed here. But this is certain
at according to this code of military ethics, if a third
rty came along and by successful warfare conquered,
th Britain and India, that third party will, by right
conquest, become the master of both countries.

REVIVAL OF SLAVERY IN ANOTHER FORM.

At the present moment the British are talking
bout granting self-rule to India. The sort of self-rule
they are granting will keep their overlordship intact.
Indians will not have the final say in any matter of
vital importance. The provincial legislatures may assume
the nature of glorified village Union Boards or Munici-
palities and the self-ruling Indians may resemble a
slave, carrying his master's luggage, who is free to carry
the weight on either shoulder according to his own
choice as well as decide himself which road he will
follow or what food he will eat during the journey.
The master would not interfere in these matters so
long as he carried the luggage to its proper destination.
Leaving aside, however, the nature of the self-rule that
India will get, let us assume that it will be real self-
rule. Even then, the way the British are distributing
political rights among the Indians, *i.e.*, on the communal
basis, is making the latter in their political aspect some-
what similar to the slaves who used to be bought and
sold in the open market in former times.

In the different provinces of India Muhammadans
predominate in some and the Hindus in others. In such
provinces as show a Hindu majority, even though the
Muhammadans have been given seats far in excess of
their actual proportion to the total population, the
Hindus will be in an effective majority. Those Hindus
who will occupy the majority of seats in the legislatures
of these provinces will be elected entirely by non-
Muhammadans; but they will nevertheless, govern the
Muhammadans of the province. The significance of this
will be that in these provinces Muhammadans will be
governed by people in whose election they will have
no voice. That is to say, in these provinces the British
will have placed the Muhammadans in the hands of the
Hindus, although in these provinces the Hindus can
claim no right of conquest over the Muhammadans.

Similarly, in some other provinces, the Muhamma-
dans are in a majority and as such will have undisputed
sway in the legislatures of the provinces. They will
elect Muhammadan legislators from amongst themselves
and place them in power in the legislatures without
any reference to Hindu opinion. In fact, in these
strongly Muhammadan provinces, the British will have
put all the Hindus in the hands of the Muhammadans
by means of separate electorates and communal distri-
bution of seats. The Muhammadans have not conquered
these provinces from the British nor from the Hindus.
Therefore, this handing over the Hindus to the Muham-
madans without voice or choice is comparable to the
sale of slaves to masters by dealers who perhaps are
stronger than both the buyers and the bought and enter
into the game solely with a view to profiteering. Those
Muhammadans who say, "Give us to rule over the
Hindus in some provinces and we shall give the Hindus
to rule over the Muhammadans in some others," "may
be asked, Who gave you the right to sell the Muhamma-
dans to the Hindus in the predominantly Hindu pro-
vinces? Who, again, gave the Muhammadans the right
to subject the Hindus to irresponsible Government in
the provinces where the Muhammadans are in a
majority?" The fact is that the minority Hindus or
the minority Muhammadans are neither cattle nor slaves
that the British might hand them over to the tyranny of
irresponsible rule by another community.

REAL DEMOCRACY CAN OVERCOME COMMUNALISM

Some say, if communal electorates and reservation
of seats were done away with and joint electorates
established instead, the Hindus would occupy the
majority of seats in the Central Legislature and the
whole of India will be ruled by Hindus as Hindus,
that is, elected by, representing and responsible to
Hindus alone. There is a serious mistake in such a
view. I would here remind you of the developments

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which, His Excellency Lord Willingdon, the Viceroy, looks forward to, even under the Communal Decision but which can be really looked forward to only under national democratic self-rule. Addressing the Legislative Assembly on 5th September, 1932, he said:

"A Government has to deal with the practical problems of the advancement and prosperity of the people. The people are not in their ordinary lives divided into exclusive communal compartments. They have the most varied relations with each other, and those relations develop series of interests and objects which are bound to cut across the purely communal outlook. I would, therefore, suggest to those who are looking at self-government in India as a problem of the Raj of one community or of another to reflect that in practice this is not a natural development. And I would urge them rather to contemplate as a more probable picture of the future a grouping of parties on the basis of economic or other non-communal interests."

With a joint electorate and general allotment of seats, the elected members will be responsible for the well-being of all, irrespective of their own religious views. With the destruction of the communal outlook, the political representatives will be elected on account of their fitness to do good to all and not because they belonged to a particular sect, so that, very naturally, the proportion of members of particular religious views in the legislatures will not always be any index to the numerical strength of the communities in the various provinces. And a majority community may not always find a majority of their own sect in the legislature. Democracy is more real than communalism, for after all, the important issues of a nation's political life are not religious. Therefore, democracy can always overcome Communal narrowness. In England, the U. S. A., and elsewhere there exist different religious and racial groups. But no one ever counts the proportion of Catholics, Protestants or Jews in the legislatures of these countries. The ministries in these countries are formed according to the strength of the various political parties. One party may be in a majority for some time, but, unless their ministry show ability to do good to the country they may lose their power in the next election, so that there is no risk of a permanent Government by an everlasting majority of any group without reference to their honesty, ability or ideals. It is easier for men to change over from one party to another than from one religion to another. So democracy cannot exist where majorities are based on non-political standards, such as religion, complexion, language or race.

In a system of joint electorates the members of the legislatures will be elected not only by their co-religionists but by all groups and they will be responsible to all groups. They will thus think it worth while to behave in such a way as would enable them to secure votes from all communities and not only from their own. As a result persons of extreme communal views will be open to defeat by more liberal and abler persons. The communities will be replaced by parties which will be composed of members of all religions. Parties will gain or lose support according as they benefit the nation by their activity. The present desire for communal "safeguards" is born of jealousy, fear, suspicion and covetousness. Taking advantage of this "opening," the British are "awarding" some power to each and every community but actually depriving the community of communities—the nation, of any real power.

If we could have real democracy in India, even a small community in a given area might turn out a large number of able men to act as legislators and officials. Merit being the criterion, smaller groups everywhere would not give up all hope as they would when branded as an eternal minority, and everybody and every group would attempt self-improvement. With communal government each community will work only for its own good and none for the common or national good. This fact alone should condemn this most infamous of political inventions.

Hindus Opposed to Communalism

With real democratic elections there is every chance that at least in Bengal and the Punjab Hindus will remain most of the time, even permanently, a minority in the legislature. Still, the Hindu Sabhas of these provinces and the Sikhs in the Punjab have voiced their opinion favouring joint electorates. The Hindus do not wish slavery to be revived in the Indian political world. They do not wish to possess unnatural and unjust power over others, nor would they give up their own right anywhere to others. In no country can there be different communities of exactly equal numerical strength. Not even the worst and most powerful of tyrants can force different communities to assume this sort of equality. Therefore, one or other community will always be larger in number. In such circumstances, true non-religious democratic politics is the only solution. Selfish exploitation of the minorities would surely break up the nation and that would bring disaster to all. Though we have been under the British for a long time we have not yet lost our manhood to such an extent as to agree to being treated politically like slaves who could be forced to change masters at any time without opposition.

National Self-rule and Not Communal Mendicancy Makes a Nation Prosperous

This rambling address has already become too long. I crave your kind indulgence for a few minutes more to enable me to place before you some concluding observations, in order to show that it is national self-rule which can make the different communities and classes and their aggregate the Nation healthy, prosperous, respected and enlightened, not communal mendicancy and the patronage received in return.

In the centuries during which the constitutions of independent and free countries of Europe, *e.g.*, like Great Britain and France, have gradually taken their present forms, there have been serious internal bloody conflicts beween their different religious communities, and the predominant groups have often subjected their opponents to fierce and unjust persecution and various kinds of unjust discrimination as regards educational facilities, laws of inheritance and the right to follow any professions, and occupations of their choice. For example, in England the burning at the stake of persons holding religious opinions different from those of the community in power was at one time largely practised. Jews, Roman Catholics and Non-conformists suffered from serious disabilities, which have been gradually removed. A similar state of things existed in France and other old free countries also. In these countries religious and other class conflicts are not yet entirely things of the past. Yet at no time have there been in these countries any reservaion of seats in their legislatures for different religious communities, whether forming a majority or a minority of the population, nor any separate elections by separate religious constituencies. The absence of such devices there have not stood in the way of these countries remaining free and becoming powerful, prosperous, educated and enlightened. The peoples of these countries as a whole, and even their most backward communities, are better educated than the most progressive sections of Indian and live in greater comfort

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

enjoy much better health than the corresponding even higher classes in India.

Condition in Other Countries Compared

It is also to be borne in mind that in India different ious communities have never indulged in mutual mings as in Europe, nor have there been such religious ssacres here as the notorious massacres on St. holomew's Day in France. Neither Hindus nor Mussal-, when in power, have so systematically discriminated inst one another as some religious communities in ope in the past.

In spite of these facts, Englishmen in India have illed into the minds of some religious communities idea that without the "safe-guards" of reservations seats, "weightage" and separate electorates, these mmunities would not be able to be prosperous, ucated, healthy, etc. If that were a fact, why were se devices never adopted in Great Britain and land, in France, in U. S. A., Japan, etc.? If the ples in those countries as a whole and the separate mmunities forming parts of them could do without m and yet be powerful, prosperous, enlightened, althy, why are these devices considered necessary in ia—devices which divide group from group, make ional solidarity impossible, and create distrust and ension where they do not exist? Every politically-ded nationalist in India knows the answer.

It may be objected that these devices may not have urred to the ancient and later constitution-builders Europe and hence the older countries of the West to wade through much mutual conflict, suffering bloodshed to their present more civilized condition, that these devices are necessary to make more eful progress possible and smoother working of new stitution practicable. Let me examine this objection. The constitution of the United States of America, re there are various religious and racial groups and re racial and religious riots still occur, is a compara- new production. But these devices are absent in constitution. That is also the case with the Canadian stitution. The Japanese Constitution is of still later , but that, too, is without these devices. And yet these countries and the different communities living re are more prosperous, more educated and more g-lived.

Should any objector consider even the nineteenth tury an age of uncivilization, we would invite his ntion to the independent and free states re-constituted Europe after the last great war in the present tury. The people in every one of these countries each of the groups constituting them have higher omes, better education, better houses, longer lives, than the people of India and the corresponding sses of Indians. Such a state of things has not been ught about there by the devices referred to above. ese have not been adopted in any of these countries. some safe-guards relating to education, racial oms and culture, language, personal laws, and the e have been provided. These and these alone should provided in India, if and where necessary.

The last refuge of objectors may be the assertion India is a peculiar country. It is true, no country exactly like any other country. India also is not tly like any other country. It is not peculiar in other sense. But perhaps this statement is not e accurate. It is peculiar in this that, whereas in constitutions of the older countries of Europe and those of U. S. A., Japan and the new States of pe only the interests of their own peoples had to safe-guarded; in the constitution to be manufactured in London for India the political and economic interests of Britishers must be safe-guarded above all and first of all.

I have said that the people of other civilized countries are more prosperous, more educated, healthier and more long-lived than Indians though there is no separate communal representation there. Let me mention a few facts and figures to prove my point.

It is unnecessary to seek the aid of statistics to prove the extreme poverty of the bulk of the Indian population. One official admission will suffice. In the Report on Constitutional Reforms, popularly known as the Montagu-Chelmsford Report, the signatories, the then Secretary of State and the then Governor-General, have stated that "the immense masses of the people are poor, ignorant, and helpless far beyond the standard of Europe. (Section 132).

As regards sanitation and health, let the following death-rates per mille per annum, taken from the Statistical Year-Book of the League of Nations 1933-34, speak:

Canada	..	10.1	Germany	..	11.2
U. S. A.	..	11.1	Austria	..	14.0
Argentine	..	12.5	Belgium	..	13.3
Ceylon	..	22.1	Bulgaria	..	16.8
Cyprus	..	17.1	Spain	..	17.3
India	..	24.8	Britain	..	12.5
Japan	..	19.0	Australia	..	8.7
Palastine	..	22.1	New Zealand	..	8.3
Philippines	..	19.4			

Another index to health is the expectation of life in years at birth of the people of different countries, as to which the following figures are taken from the Census of India, 1931, Vol. I, Part I, pp. 171-72ff

Country.	Males.	Females.
Australia	55.20	58.84
Denmark	54.9	57.9
England	48.53	52.38
France	45.74	49.13
Germany	44.82	48.33
Holland	51.0	53.4
India	22.59	23.31
Italy	44.24	44.83
Japan	43.97	44.85
Norway	54.84	57.72
Sweden	54.53	65.98
Switzerland	49.25	52.15
United States	49.32	52.54

As regards education, the following table of illiteracy taken from Whitaker's Almanack 1934 will give some idea:

Country.	Year.	Per cent of Population illiterate.
Turkey	1927	91.8
Egypt	1927	85.7
Brazil	1920	67.0
Portugal	1920	65.0
Mexico	1921	64.9
Spain	1920	43.0
Greece	1928	43.0
Poland	1921	32.7
Italy	1921	26.8

By now all these countries have made appreciable progress in education.

Comparatively unprogressive countries have been mentioned in the above table. In 1930, in the United States of America only 4.03 per cent. were illiterate. In Japan, there are practically no illiterates except infants. In Russia (U. S. S. R.) in 1926, the percentage

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of illiterates was 48.7. At the end of 1930, it was 33. And at the end of 1933 it was only 10. Mark the rapid increase in the number and percentage of literates in Russia. In India in 1921, the illiterates were 92.9 per cent of the population, and in 1931 they were 92 per cent of the population. But even this slight progress is deceptive. For, whereas in 1921 the total number of illiterates was 29,34,31,580, in 1931 it was 32,16,28,003.

The Negroes of America, who were sold as slaves in America, were originally an uncivilized people without literature and without even an alphabet. Till their liberation on December 11, 1865, it was a penal offence to teach them or for them to receive any schooling. But in 65 years from 1865 to 1930, they have made such progress in education that in 1930 only 16.3 per cent. of them were illiterate, against 92 per cent. of Indians. This ought to make both us and our Government ashamed for we have ancient literatures and more alphabets and scripts than we know what to do with.

Remedy of Remedies

One of the main reasons why India is poor, illiterate and unhealthy is that she is not self-ruling. Therefore we should make the greatest possible efforts to win self-rule.

There is a Sanskrit proverb which says

वाणिज्ये वसते लक्ष्मीस्तदर्धं कृषिकर्मणि।
तदर्धं राजसेवायां भिक्षायां नैव च नैव च॥

which means that the Goddess of prosperity dwells in commerce, half of that in agriculture, and half of that in the service of the State, but not at all in begging.

Imperial preference (open or disguised), manipulation of exchange and currency, the practical monopoly of shipping in foreign hands, concessions of minerals, etc., to foreigners, the foreign control of our public exchequer and the like make it impossible for the generality of our people to prosper by commerce and industry. Agriculture, generally speaking, is in a backward, pre-scientific condition. The public services and the army, according to the Montagu-Chelmsford Report, find occupation for only 1½ per cent of the people. Begging for communal favours or any other favours cannot make the people at large either healthy, wealthy or enlightened. National Responsible Self-rule is the remedy of remedies. Let us strive for it.

INSURANCE NOTES

Unemployment Insurance

The Unemployment Act, 1934, which has been in force since June last, in Great Britain contains in the main the provisions of the earlier Unemployment Insurance Acts and there is no change in the rates of contribution obtaining at present. The reduction in the rates of benefit introduced under the National Economy Act 1931, has also been restored. The new Act grants what are to be known as "additional days" for benefit. The qualification for being entitled to such benefit is that the insured contributor, claiming the benefit has been fully insured for at least five years. The number of "additional days" for which benefit is to be granted is calculated by what is called the "ratio rule." For every five contributions which have been paid by the claimant during the past five years three "additional days" for benefit will be allowed. If the claimant is a juvenile, that is, person under 18 years of age, every two contributions will be treated as one for the purpose of "additional" days calculation.

The new Act embraces within its scope juveniles at school-leaving age and in this respect it has gone in advance of the previous legislations. With a few minor exceptions, all persons 14 years of age and over who are working for an employer, will be insurable unless they are either (*a*) employed in agriculture, (*b*) employed in domestic service in private houses, or (*c*) apprentices receiving no wages.

The new Act aims at placing the Unemployment Insurance Scheme on a sound basis and with this end in view the "Unemployment Insurance Statutory Committee" has been set up. The committee are entrusted with the duty of examining the working of the Scheme every year and reporting upon its financial position and should they ever find it necessary, they are to make such suggestions as will improve the position of the Fund and make up the deficiencies, if there be any. The new Act is an improvement upon its predecessors and it is expected that it will be successful in achieving the ends for which it has been enacted.

NOTES

"An Un-Islamic Outrage"

By publishing the following signed leader in *The Bombay Chronicle* its editor has rendered distinct service not only to his own community, but to others also :

AN UN-ISLAMIC OUTRAGE

"I am giving only one life for protecting the honour of the Prophet, but Mussalmans will be prepared to give lakhs of lives for the same object." So declared Abdul Qaiyum, the youthful Muslim from the N.-W. Frontier Province, when he was convicted by the Sessions Judge of Karachi for the murder of Nathuram and sentenced to be hanged. The words reveal the wrong and perverted notions of Islam, which are entertained by not a few of those who call themselves Muslims as well as the danger involved, at the present stage of educational progress in India, in the publications of books and leaflets which contain unwarranted, insulting and provocative attacks on the founder of any religion. There are few crimes more heinous than, in the name of one religion, to defame the founder of another. But not less condemnable and outrageous is the notion that it is a meritorious deed to take the law into one's hands and kill the perpetrators of such crimes. Nathuram, the murdered man, had paid the penalty for his crime when he was sentenced to two years' rigorous imprisonment for publishing a scurrilous pamphlet about Prophet Muhammad. But evidently there are Muslims, who belive that it is a meritorious act to kill a man who insults their Prophet. It was this belief which was responsible for Abdul Qaiyum's homicidal assault on Nathuram and, worse still, for his justification of it. No belief could be more repugnant to the teachings of Islam and to the practice of the Arabian Prophet, who invariably forgave his traducers and was magnanimous towards his enemies. The Sessions Judge in sentencing Abdul Qaiyum said : "There is no immunity for a Muslim to do what he likes according to the personal law of Islam." If the Sessions Judge made this statement in reference to the contention of the defence Counsel, it must be made clear that there could be no greater calumny against Islam than to suggest that it, directly or indirectly, sanctions or justifies an outrageous act such as that of Abdul Qaiyum. According to the Sessions Judge the accused had not murdered Nathuram out of personal grudge, but out of veneration for the Prophet. Whatever his motive, the accused could not have committed a deed more un-Islamic and more antithetic to what the Arabian Prophet lived for and taught. No one has a right to call himself a Muslim who does not regard this outrage as indefensible and there could be no greater disservice to Islam than to consider perpetrators of such outrages as martyrs in its cause. SYED ABDULLAH BRELVI

"Empire merely Based on Brute Force" Not Wanted?

London, Oct. 5.

Sir Herbert Samuel speaking at Dundee, profoundly regretted the demonstrations at Bristol, yesterday, because India was not a party matter. He declared, "It concerns the whole country and also the Dominions and the latter will not consent to be party to an Empire which is merely based on brute force. The Liberal Party actively co-operated with the Government in fashioning the new Indian constitution and if the Government stands to its proposals the Liberals all over the country will give it continuous support."—Reuter.

As if the Government's proposals are tantamount to laying the foundation of the new Indian constitution on the willing consent of the people of India !

When have the Dominions *practically* sympathized with Indian aspirations, and what will they do if the British *Empire* (of which they are not parts), not the British *Commonwealth of Nations* (of which they are parts), proves to be merely based on brute force ?

We do not mean to say that, individually, Dominion statesmen have not declared themselves in favour of self-rule for India—they have done so. But in practice the Dominion Governments have treated Indians as a very inferior people.

General Smuts on Self-government for India

London, Oct. 19.

General Smuts emphatically declared himself wholeheartedly in favour of self-government for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India at Dundee on the occasion of conferment of freedom of the city. He expressed the opinion that the problem was eminently one for the exhibition of that genius for compromise which always distinguished the people of Britain in relations with other peoples and in the solution of their own political problems. "What is happening to-day is not forced; it is inevitable. India must have self-government conferred on her."

General Smuts recalled that a century ago Macaulay introduced into India British ideas of self-government, justice and equal rights which had been germinating. The "most explosive thing in the world is ideas and those seeds of ideas planted by Macaulay have produced their crop and you are faced with the situation which must be dealt with."

"Whatever you do in the matter let it be the work and gift of the nation as a whole, it will be a sad day and a sad occasion if, self-government of India should become a party question in Britain and should not be treated as a great national issue in which every section of Britons joined."

General Smuts pointed to the great success which resulted from the great act of British statesmanship in granting self-government to the ex-Boer republic 1907, when every counsel of worldly wisdom seemed to point out a different direction. South Africa's position in British commonwealth to-day was largely due to act of faith. "My strong wish is that the precedent followed there should be followed in this case, too." —Reuter.

The opinions expressed by the Boer statesman are welcome. It should, however, be borne in mind that he is not a British statesman, and also that British statesmen when in power do not or cannot give effect to their pro-Indian views expressed when out of power or in opposition.

India and British Political Parties

When General Smuts desired that India should not be made a party question in Britain, he made his meaning clear. He wanted that all British parties should jointly confer self-government on India. But when British politicians indulge in the cant of India not being a party question, what is meant is that all British parties should combine to rule India as a subject country for Britain's benefit. We are afraid that is the sense in which Sir John Anderson, Governor of Bengal on leave, referred in his speech at Edinburgh on the 15th October last to "the best way of *governing* India"—not, mind, "the best way of *making India self-governing*."

In a speech Sir John said that the irresistible march of evolution in India was full of difficulties. From the standpoint of those responsible for the Government of India, it was greatly to be deplored that Indian affairs had become from time to time a matter of acute political controversy in Britain.

Whatever the differences might be as to the best way of governing India, it could be agreed by all men of practical experience that the only policy likely to succeed all along the line was a policy which could be steadily and persistently pursued without being tossed and twisted about in the turbulent stream of party politics.

Sir John said that Britain's wonderful record in the management of external affairs had been made possible largely by the fact that those affairs were treated as standing above party politics.

He did not believe that in the Parliamentary life of Britain, Indian affairs could for very long exercise a dominant influence. The issues which would sway the electorate to determine the alignment of political parties would always be domestic.

If this was so, justice, as well as experience, dictated that the destinies of India should be worked out in an atmosphere of judicial calm and the leading statesmen of all parties fully realized this.—Reuter.

What is said to be everybody's business may be nobody's business, and, therefore, it is only proper that the problem of giving self-government to India should be, not a party problem, but an all-British-parties problem. "The destinies of India should be worked out in an atmosphere of judicial calm," in order that no British party or politician may be carried away by any remnant of War-time zeal for world democracy, self-determination for all nations and the like. Justice dictates it. But justice of what variety? The ordinary colourless kind, or of the martial or ordinance sort?

British Labour Conference and Self-determination for India

In what we have written in the foregoing note it is not to be taken as implied that we expect any British party to do justice to India. It is easier for individuals to desire to be just than for parties to be just in practice. Many members of the British Labour party have expressed a desire for justice to India. But the party as a whole has made the gesture indicated in the following telegram:

London, Oct. 3

The Labour Party Conference at Southport to-day considered a resolution submitted by Mr. V. K. Krishna Menon, expressing the conviction that it is imperative that the principle of self-determination for the establishment of full self-government for India should be implemented forthwith.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The resolution supported the Indian demand that constituent assembly should be elected, based on adult franchise.

Mr. Arthur Henderson urged the withdrawal of the resolution and refused to give an undertaking on behalf of the Executive to carry out its policy of self-determination for India. He said: "We have laid down very clearly that we are going to consult, if possible, all sections of the Indian people. That ought to satisfy everybody."

The Conference then passed on to other business —Reuter.

Mr. Henderson ought to know that *that* does not satisfy the Indian people. "We are going to consult, *if possible*, all sections of the Indian people." Just as at the so-called Round Table Conferences all sections of the Indian people were alleged to have been consulted!

Indo-British Partnership!

A Reuter's telegram reads in part as follows:

London, Oct. 4.

A spirited attack on the Government's India policy was repelled at the Conservative Party Conference, which opened at Bristol to-day by the adoption of an amendment, by 543 votes to 520, that it was not in the interest of the Party that the Conference should pass any resolution, particularly as it had been decided that a special meeting of the party Council should be held to confer with Mr. Stanley Baldwin when the report of the Joint Select Committee is published.

The Conference thus rejected Sir Henry Page Croft's resolution, which he moved amid cheers.

"This Conference, which is prepared to support the measures for a greater measure of self-government in the Indian provinces step by step and in accordance with the Government of India Act, records its emphatic opinion that the partnership between Britain and India in the Central Government of the Indian Empire must not be dissolved and urges the Government to assent to no proposals which imperil the future of India within the Empire or impair the confidence and unity of the Conservative Party in view of the menace of Socialism."

Indo-British partnership indeed! There is as much partnership between Britain and India as there is between India and the Man in the moon.

But if the sort of relationship which exists between India and Britain can be called partnership, there are a greater degree and quantity of the thing in the White Paper proposals than exist at present.

For, those proposals make the Governor-General and the Governors greater autocrats than they are at present and add greatly to the powers of the steel frame. That is so far as administration goes. As regards growing rich by utilizing the resources of India, the proposals make it very clear that Britishers are to be in an unequivocally better position than now. This fact has been brought out anew in Prof. D. N. Banerjee's two articles in the October and November numbers of this Review.

The rejection of Sir Henry Page Croft's resolution by such a narrow majority shows that the die-hards are very strong. The result will be that more "safe-guards" will be added to the White Paper, making it blacker than it is.

Or the White Paper proposals may be scrapped altogether. Mr. Neville Chamberlain has said as much when he stated that it must not be assumed that the future constitution of India would be based on the White Paper.

If that thing be scrapped altogether, no tears will be shed so far as we are concerned. We shall only ask (whom we do not know), why all this bother, commencing with the Simon Commission, continuing with the so-called Round Table conferences and ending (supposing that that is the concluding chapter) with the Joint Parliamentary Select Committee, and why this squandering of the poor Indian taxpayer's money.

Mr. Fazlul Huq Wants More Empty Hostels

In the course of his presidential address at the recent Bengal Muslim Youths Conference, Mr. Fazlul Huq

> "peaded for a larger number of well-built Hostels throughout Bengal for Muslim students."

His attention is drawn to the following paragraph page 83, in the Government of Bengal's *Eighth Quinquennial Review on the Progress of Education in Bengal* for the years 1927-1932:

> "A considerable proportion of the accommodation provided in the Moslem hostels, with the solitary exception of the Rajshahi Madrasah, remained unoccupied during the period [of five years] and a few hostels were also closed owing to the lack of boarders."

No Examples of Self-sacrifice in India for Moslem Youth!

Mr. Fazlul Huq concluded his address with an appeal, part of which runs as follows:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Before I sit down, I wish to say a few parting words by way of fervent appeals which I hope you will allow to burn into your hearts. I appeal to you to take up the work of organizing yourselves into a band of devoted workers in the cause of your community and country, with all the ardour, the enthusiasm and the energy of youth. I appeal to you to be inspired with that idea of self-sacrifice which filled the hearts of the Neo-Spaniards of the days of Cervantes who regarded self-immolation in any public cause as the only true religion known to man."

It may be that Mr. Fazlul Huq did not want Moslem young men to imitate the examples of self-sacrifice set in India by non-Moslems (assuming, of course, that there have been such). But it is rather strange that, though there have been Mussalmans in India for more than a thousand years, he could not discover any examples of self-sacrifice among them.

Baroda Girl Guides in South Africa

Reuter reports :

CAPE TOWN. Oct. 16.

The party of Girl Guides from Baroda, who are touring South Africa, are being enthusiastically welcomed by the Indian community as well as by European residents.

Their pleasing demeanour, skill with various weapons, notably the bow and arrow, and excellent drill displays have created a most favourable impression.

The Guides, who are now nearing the end of their tour, arrived to-day at Ladysmith (Natal), where they were welcomed by the Mayor and a large gathering of Indians and Europeans.

Over the Mayor's head was suspended a huge garland of flowers. Suddenly a Guide stepped out and from a distance of 12 yards drew a bow. An arrow sped directly over the Mayor's head, cutting the cord by which the garland was hung.

The garland fell over the Mayor's shoulders—a spectacular event which greatly pleased those present, including the Mayor, after he had recovered from his initial surprise.—Reuter.

The Rand Daily Mail has given an account of what the Girl Guides said and did at Johannesburg.

The eloquence of three Indian Girl Guides, aged 14, 15 and 16 wearing khaki jackets and knicker-bockers, with daggers slung at their sides swayed an audience of nearly 3,000 to outbursts of wild enthusiasm in the Selbourne Hall.

They were members of the party of girl guide students from the Arya Kanya Mahavidyalaya Baroda, India, under their leader Pandit Anandpriyaji. The Mayor of Johannesburg, Mr. D. Penry Roberts, presided.

Catherine Mayo's book, "Mother India," was held up to scorn by these girls.

"Are we the down-trodden women of whom she wrote" they asked, and proceeded scathingly to criticize the book. They took the authoress to task as a woman who thought she could assimilate the whole history of India in a 'hurricane tour.'

"We stand before you to-night as examples of young Indian womanhood—the alleged victims of child-marriage—to give the lie direct to "Mother India," they declared.

The big Indian audience roared its approval.

Introducing the Girl Guides, Mr. P. B. Singh said that the tour had been made possible by a very rich sugar manufacturer in Lugazi, Uganda, Mr. N. K. Mehta who was an ardent supporter of the education of Indian women. To show his faith in the Baroda institution he had actually sent his baby daughter to that school.

"Come stand on your chair, Sabita," he said, "Show yourself to the people." And a pretty olive-skinned girl with sleek black hair stood in her khaki uniform and smiled shyly.

Subhadra Kumarti, the 16-years-old guide in her speech, which was made in English and was marked by forceful gestures, urged Indian women not to forget the traditions of their country. They must preserve their individuality.

"The modern Indian woman is coming forward to take her part nobly in the social and political life of her country," she said, "where woman is respected, there does wisdom dwell, a wise man has said. We come to you to present a true picture of Mother India."

At the end of her speech she naively added: "We are proud to be in this historic city of gold—and we hope to have a jolly good time here!"

The guides then sang a song in Bengali, written by Sir Rabindra Nath Tagore.

Another girl, 15 years old, referred in Gujerati to Miss Mayo's book. "An American has written that India is a land of child-marriage, Suttee and general persecution of women. This is an untruth," she exclaimed, and forcefully smacked the fist of one hand into the palm of the other.

In his speech of welcome the Mayor said that it gave the Mayoress and himself great pleasure to be present and wish the Girl Guides a happy tour of the Union.

Mr. M. S. Nana welcomed the tourists on behalf of the Transvaal Indian Congress.

"It is in your hands," he said, addressing the Girl Guides, "in the hands of youth, that the destiny of our motherland lies." Recently an All-India Soccer team had toured the Union. They represented the men of modern India. To-day the Girl Guides were here. They represented modern Indian womanhood.

Months ago we had occasion to witness a drill and acrobatic performance of these Girl Guides at Santiniketan before the Poet, Rabindranath Tagore. He was pleased with them.

Exhibition of Pictures at Rangoon

Mr. Manindrabhushan Gupta, who has gone to Rangoon to exhibit his water-colours, is an accomplished artist as well as interpreter of Indian art. He had his training at Santiniketan, and was a teacher of art for a number of years in Ceylon.

Upheaval in Spain

Poverty of the masses had a great deal to do with the French Revolution. That was one of the main causes, if not the principal cause, of the revolution in Russia. Extensive economic distress lay at the root of the recent upheaval in Spain, too. A large part of the population of that country live in a state of semi-starvation. It is not merely the agricultural labourers who generally cannot appease their hunger, but even the peasant proprietors have often little to eat. And Spain is not distinguished for manufacturing industries.

Statesmen should always beware of the hunger of large masses of men.

India's Representative at the World Press Conference

There have been many world conferences where India was represented by non-Indians. It is satisfactory, therefore, to learn that at the World's Press Conference to be held in Melbourne next year India is to be represented by an Indian editor of an Indian-owned paper. It is an additional source of gratification that Mr. Tushar Kanti Ghosh, editor of the *Amrita Bazar Patrika*, is to represent India; for that paper has a long record of signal service to the country under distinguished editors.

A Lady candidate for the Assembly

The *Hitavada* of Nagpur writes:

> The Congress Nationalist Party has set up Shreemati Shannodevi, ex-principal, the Kanya Mahavidyalaya, Jullundur, as a candidate for one of the seats in the Assembly elections. The lady has done considerable work for the Congress cause and has suffered sacrifices, having been imprisoned in the first civil disobedience movement. Women in India.....have always been apprehensive of their success in elections in a joint electorate constituency and for that reason have been slightly inclined to favour separate electorates. If this lady is elected, it will be a signal triumph for womanhood in India and a fitting answer will have been given to the protagonists of separate electorates for women.

We have known Srimati Shannodevi for years as a lady who has had remarkable achievements to her credit in connection with the Jullundur Kanya Mahavidyalaya, one of which was the collection of Rs. 100,000 for it, for which she toured India, Burma and parts of Africa.

She stands for the Jullundur Division. We support her candidature with all our heart.

India's Public Health Record

The figures reproduced below from the *Bengal Public Health Report* for the year 1932, published last month, show how unsatisfactory and deplorable is India's public health. The figures relate to the year 1932.

Province.	Birth-rate per mille.	Death-rate per mille.	Increase or Decrease per mille.
Bengal	26·6	20·5	+ 6·1
Madras	36·03	21·96	+14·07
Bombay	35·89	23·04	+12·85
U. P.	34·66	22·23	+12·43
Panjab	41·36	24·70	+16·66
C. P.	45·20	26·89	+18·31
B. & O.	33·8	20·6	+13·2
N.-W. F.	28·89	20·00	+8·89
Burma	27·75	17·30	+10·45
Assam	30·06	18·96	+11·10

INFANT MORTALITY RATES PER MILLE

	Male.	Female.	Total.
Bengal	184·8	172·4	178·9
Madras	193·62	171·78	182·58
Bombay	164·01	148·12	156·39
U. P.	169·16	155·49	162·72
Panjab	182·80	173·72	178·52
C. P.	215·16	186·40	201·12
B. & O.	138·2	119·0	128·8
N.-W. F.	129·93	128·57	129·34
Burma	196·64	171·85	184·50
Assam	166·05	146·51	156·58

These figures may be compared with the following statistics of death-rates per mille in some other countries:

Canada	10.1	Germany	11.2
U. S. A.	11.1	Austria	14
Argentine	12.5	Belgium	13.3
Ceylon	22.1	Bulgaria	16.8
Cyprus	17.1	Spain	17.3
Japan	19.0	Britain	12.5
Palestine	22.1	Australia	8.7
Philippines	19.4	New Zealand	8.3

Hitler the Complete and Perfect Autocrat!

Hitler has become both life president and life Chancellor of Germany. In addition, Reuter wires:

> BERLIN, Oct. 16.
>
> German Ministers will no longer be responsible to the Reichstag and a law will shortly be promulgated which will require Ministers to take an oath of fidelity to Chancellor Herr Hitler alone.
>
> This announcement was made in a speech to-day by Herr Lammers, Secretary of State, at the Chancellery. He added that the concentration of all power into the hands of one man was the sole means of securing Germany's recovery —Reuter.

Tagore on the Place of Art in Education

Interviewed by the "United Press" prior to his departure for Madras the Poet, Rabindra Nath Tagore, said :

> The present system of education in this country is purely academic in its aims and activities and by woefully neglecting the glorious traditions of arts that were once the most effective instruments of Indian culture it has stifled the true cultural aspirations of India and has brought about a deplorable state of dullness in the life of the nation. The art has the unfailing virtue of investing a new value to life and its varied creative expressions. I consider it a sacred mission to revive those ideals of Indian art and make them relieve in the educational and cultural life of India. I am shocked to find the poverty of life that India presents to-day which to a great extent is due to the fact that her arts are being looked down upon the arts which are allied to the heroic aspect of life expressing in articulate forms her inner aesthetic institutions.
>
> I have had two happy experiences in Bombay and Ceylon of being able successfully to call the attention of the people there to the imperative need of giving to the arts an important place in education and I hope my visit to Madras will be equally successful.

"Red Lights" of Bombay

The seamy side of Bombay's night life, with its blatant vice, has been mercilessly exposed by Mr. Lincoln Gardener Ellison, author and traveller, in an article in the *Modern Thinker*. He has given a graphic and revolting pen picture of a notorious vice-ridden and disease-infected spot in that city. We can quote only the first paragraph. He writes :

> There are red-light districts, but probably no city in all the world has a street where vice is so blatant and unashamed as Bombay. Here, where West merges into East in a melody of contrasts, vice is the more repulsive because it is so undisguised. There is nothing hidden about it. The evil exists and you have to put up with it.

That other cities have such moral plague spots is certainly no palliation ; but it must be said that Bombay does not most probably hold the record. And Bombay has been putting up a fight with commercialized vice.

American Investigation of Munition Industry

Investigations by U. S. A. Senate Committees are generally very searching and thoroughgoing. The present investigation into the American munitions industry will not most probably be an exception. *The New Republic* writes :

> The Senate committee investigating the munitions industry has made a magnificent start. For the first time, the people of this and other countries have a chance to see the armaments business as it really is. They can see it as a business that lives by deliberately fostering ill-will and threats of war between nations and by shamelessly bribing high-placed officials of all countries.
>
> Since the World War, the United States government has many times boasted of its labours for disarmament. We now find that the State, War and Navy Departments have all along privately been acting as sales agencies for American armament concerns. We find that our ambassadors, generals and admirals have been on terms of improper—in one instance, obviously culpable—intimacy with the munitions manufacturers and have done them innumerable favours. From the Senate investigation, we also learn something about the arms makers of other countries, and find the same scandalous situation, varying in detail in Great Britain, France, Poland, Argentina, Brazil and Peru. It seems possible the revelations of the last few days concerning the operations of Vickers will shortly compel a parliamentary investigation in England.

Some idea of the scandalous situation has been given already by Dr. Sudhindra Bose, published in our last October number. Regarding the sensational character of the allegations made one example, taken from the same paper, will suffice :

> That our government, as a further aid to the Driggs Company, invited a Polish military mission to visit this country. After long delays, the invitation was accepted by Poland, and the Driggs concern was at the point of closing a contract involving many millions of dollars when America's departure from the gold standard in April, 1933, caused the Polish government to reconsider. According to Driggs officials, early in these anti-aircraft negotiations King George summoned the Polish Ambassador before him, and demanded that the business be given to Vickers. London sources indignantly deny this story.

Sir Akbar Hydari on Communal Unity and Education

In the course of his address at the Bombay Provincial Muslim Conference Sir Akbar Hydari said that ignorance of each other's history, literature and culture was to a great extent responsible for communal dissensions and hatred. That is undoubtedly part of the truth.

He observed that he was opposed to separate communal education. He proceeded to say that, if the Benares Hindu University

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had not grown up, the Muslim University at Aligarh would not have been established. This statement is misleading. The Muslim *University* at Aligarh may be of later date than the Benares Hindu University. But the Aligarh Muslim University is only the Aligarh Muhammadan Anglo-Oriental College renamed and magnified ; and that college was founded by Sir Syed Ahmed long before the Benares Hindu University came into existence.

Impressions of Government of India's Deputy Regarding Zanzibar Indians

That an unlimited number of Europeans from various countries can make money in various parts of Asia, Africa, South America, etc., and return to their own countries with their wealth, is not objected to. But if Japanese, Chinese and Indians—particularly the last—make money anywhere and return to their country without settling in their places of business, that is considered abnormal and a great offence on the part of these orientals. A main charge against Indians at Zanzibar, who are going to be ruined by anti-Indian legislation was that they were birds of passage making money in that island. But that charge, assuming without admitting that it is an offence, is mostly false. Mr. K. P. Menon was sent to Zanzibar by the Government of India for correctly investigating the situation there so far as it relates to Indians. He described his impressions in the course of a speech addressed to a gathering of Indians and Arabs at Pemba. He said that he had learned that more than 80 per cent of the Indians at Zanzibar had permanently settled there. So, most Indians of the island not only make money there but spend and invest it there, too.

Principal S. K. Sen of Delhi

By the sudden and premature death of Principal Surendra Kumar Sen of the Hindu College, Delhi, not only Delhi but the country also has lost a distinguished educationist. He was only 44 years of age at the time of his death. He was an Oxonian and had passed the I. C. S. competitive examination, but was disqualified owing to a physical defect. It is remarkable that under him the Delhi Hindu College made a definite advance in athletics and came to acquire an individuality of its own. He was Secretary of the local Bengali Club, the local Prabasi Banga Sahitya Sammelan, the Arts Exhibition, and the head of the history department of the Delhi University. He was also a member of the International History Society. He took great interest in art, music and sport and was a successful administrator. His modesty, kindness and geniality had made him very popular.

Stopford A. Brooke on "Gitanjali"

In a letter written to the Poet, Rabindranath Tagore, on December 18, 1912, by the late Stopford A. Brooke, published in the October number of *Visva-bharati News*, we get glimpses of what that eminent minister of religion and literary critic thought of the Poet's father's Autobiography and of the translations of the Poet's poems made by himself which were subsequently published as *Gitanjali* and won him the Nobel Prize.

> I was deeply interested by the Autobiography you sent to me, not only by the history it gave me of the whole of the vital religious movement it records, but chiefly by the character revealed in it, and by the movement and life of his spirit. It made a deep impression on me and awakened many thoughts in me—too many for me to put into words. I see how many elements in his soul, you have passed through your own soul, reshaped them there and given them a new form in your poems. Those poems of yours, however, somewhat derived from him, are vitally your own, and sealed with your own personality. But the others, the greater number, are I think the most individual, personal and original poems I have ever read, and how much more intense their personal originality would be, if I could only read them in their own language. Yet, as you yourself have translated them, their native air and light still suffuses them. We have no new soul and atmosphere imposed on them. One person, one only, is in them.
>
> They make for peace, peace breathing from love. And they create for us, too storm-tost in this modern western world, a quiet refuge and a temper in which we realize that the real world is outside our noisome world, in the Things and Ideas that are eternal in immortal Love. And because the poems all spring from union with this undying love, they appear in beauty, in a thousand shapes of beauty. It is well for us, over here, amid our crowded varieties and useless philosophies, to have a book which without denouncing us—leads us into the meadows of peace and love and refreshes us when we are weary, but yet is not content till it bids us pass from quietude to shape what we have learned there into the life of men and women, and bring them also into peace.
>
> I am old, and I wish I had more of peace, of certainty in it. But I am very grateful to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

you for bringing so much of it to me, by day, and when I lie alone at night. I send you the last volume of sermons I have published, as a little mark of a great gratitude. In some hour when there is leisure, it may interest you to dip into it here and there, and see what a man thinks who has lived through stormy times into old age, and is sure that love is, and was and will be, for ever.

I am most sincerely yours,
Sd. Stopford A. Brooke.

Dr. Bhatnagar's Munificence

A British Company exploiting the mineral oil resources of the Panjab having benefited by the researches in petroleum of Dr. S. S. Bhatnagar of the Panjab University, who is a chemical researcher of note, wanted to mark their appreciation of his work by giving him Rs. 1,50,000. Dr. Bhatnagar has munificently made over this amount to the Panjab University for founding five research scholarships in chemistry. His self-sacrifice and devotion to the cause of science are highly laudable. The way in which the Company chose to mark their appreciation of his work is also admirable. Both the parties concerned have acted in a praiseworthy manner.

We hope it will not be considered ungracious on our part if we say that the incident would have given us unalloyed pleasure if the Company concerned had been Indian.

"Imperial Chemical Industries, Ltd."

In the course of the debate in the Assembly relating to the giving of the monopoly for the exploitation of certain chemical resources in the Panjab for fifty years to a British Company, it was officially stated that the concession was or would be given to a British company in the absence of a similar Indian one.

Prof. Ruchi Ram Sahni, in the course of an article in the *Tribune*, exposes the Government's pretensions that because no Indian syndicate came forward to apply for it, therefore it has granted or is going to grant, the monopoly for the exploitation of the chemical resources to a British company. It is unquestionably true that no Government keeping the interests of India in the forefront could have put forward such an excuse for mortgaging the country's future in regard to an important industry. He asks, "Is it not the duty of a Government, inspired with the real spirit of a trustee, to make an effort to find a syndicate and even to help one to come into existence?" He recalls an instance how about a quarter of a century ago they, in the Panjab, contemplated to start a concern for the manufacture of alkalies, but were thwarted in their plans because an Indian chemist, who was sent to England with a Government technical scholarship to study the practical side of this branch of the subject, could not obtain admission into any British alkali works, despite his seeking the help of the Secretary of State. One of the heads of a British chemical concern is reported to have openly expressed himself at that time to the effect that 'if ever the industry is taken in hand in India, it is we who shall do it and no one else.' However, we feel that if the Government of India would stay its hand and refrain from granting the monopoly to a non-Indian company and notifies the Indian public about it, indigenous capital and enterprise would immediately come forward to take up the work in hand. But will it do it? The answer to this question will show its regard for India's interests.

First School of Art in Sind

The opening ceremony of the Sind Art Exhibition under the auspices of the Bandhu Ashram School of Art at Hyderabad (Sind) was utilized also for making known the history of that school of art. We read in the *Sind Observer* that the work of building up this institution has been done by Mr. Monimohon Ray Chowdhury of Santiniketan and Mr. Dhirendranath Ghose of the Mayo School of Art of Lahore. Dewan Metharam Dharmdas Trust has given them this opportunity.

Along with drawing and painting this school teaches a few crafts, such as leather work, lamp-shade making, stencil cutting, etc. Its advanced students have been executing a fresco on the walls of the central room of the school.

Sadhu Vaswani in the course of his presidential address welcomed with joy the advent of filling up a great gap in the life of Sind—a School of Art. He commended the pictures placed in the exhibition to the audience and thanked Mr. Kewalram, Mr. Ghose and Mr. Chowdry for their efforts in the direction of creating an interest in the great work of Art. He invoked the blessings of God on the School of Art and hoped that it would thrive more and more and day by day.

Sadhu Vaswani further appealed to Sindhi boys and girls to adopt the ways and methods of simplicity. It was not in costly clothes that lay the true sense of beauty. Sindhi girls and boys were labouring under that illusion and delusion. It was in simplicity that the true sense of beauty could be found. He appealed to the students never to forsake the ideal of simplicity.

More than 125 pictures, original and copied, were exhibited. Among the originals have been mentioned and described Miss Ruki G. Malkani's "Behind the Curtain," Miss Mumal T. Malkani's "Sasui and Punchu,"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Kewal B. Malkani's "Mira Bai" and Grandpa's Pride," Miss Issar N. Jagtiani's the Moonlight Night," Miss Jasoti K. adani's "Maravi," and Miss Gopi T. angiani's "On the Door".

Amongst copy work, Bhoji A. Adwani's "Budha," Devi G. Lalwani's "Christ," Dholi H. Bhawnani's "Young Mother," Giani A. Vaswani's "Venus," Gopi Lalvani's "Patient in Tribulation," Jama J. Shahani's "Radha in Swoon," Muni Chandirani's "Count Leo Tolstoy," Parpati H. Thadani's "Saligs Tranlien," *i. e.*, an old soldier, Parpati G. Sippy's "Virgin in Prayer," Radhi N. Bhawnani's "Sudhama," Ruki G. Malkani's "Expectation," Sati T. Bhawnani's "To the Temple" and Vishni D. Jagtiani's "Young Lady" deserve special mention.

The stencil work by Miss Godhawari B. Shivdasani was quite good, and the leather-work by Miss Kalawanti B. Malkani was excellent.

London-Melbourne Air Race

Last month we read in the papers news of London-Melbourne Air Race and how the

Mr. Scott (figure wearing a great coat), winner of the London-Melbourne Air Race, at Bamrauli Air Station.

competing aeroplanes passed through India ;— and we asked : Where is India ?

We were present at the air station at Bamrauli (Allahabad) when Mr. Scott, winner of the race, landed there. His machine being painted red, it could be seen from the ground even when it was at a great height. He arrived at Bamrauli about an hour before he was expected. He is a tall man with a splendid physique. At the time he landed he wore a long coat, felt shoes, socks turned down and an evening cap. He had a rolling or swinging gait like that of sailors.

Japanese Competition in the World Market

A Japanese trade mission recently spent four months in visiting the South Sea Islands, India, Asia Minor, and Europe. So far as India is concerned the mission's report says some interesting and some naive things. In its opinion, "the nation that is most drastically oppressing Japanese products is Great Britain." "Oppressing" is delightful! The report observes that "India is no longer interesting." It was interesting so long as nothing was done here to prevent Japanese goods flooding the markets. But Japan has still some hope. For Japanese articles can reach British India through the State of Cutch which "has never joined in British tariff agreement." It is also noted that the attempts of the British authorities to suppress the trade through Cutch have been unsuccessful, because that "State is anti-British." It may be that that State and many or most other States are "anti-British," but the writer of the Japanese trade mission's report does not know that such anti-Britishism can be crushed by the British authorities at any moment.

Another thing which the report says is that in India "the masses respect Japan as the leader of the Asiatic races." When Japan defeated Czarist Russia, there was no doubt some respect felt for her as having taken the first step to make a breach in the citadel of European ascendancy in the East. But that feeling of respect has disappeared owing to Japan's increasing imperialism and militarism.

But whether Japan is respected or not, it would be a great mistake to think that she is able to more than compete in some world markets owing merely to some adventitious circumstances or to trickery. Japan succeeds mainly by the development of technical skill and machinery equipment. As

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the September number of *Far Eastern Social Information*, published by Japan's Research Institute for Social Problem, informs its readers :

A remarkable development has been made in technical skill and machinery equipment in all branches of Japanese industries. As the Japanese cotton industry started considerably later than other advanced countries it was able to avail itself of the benefits from the start of new superior machinery and other equipment perfected in the advanced countries. The success of Japanese mills in skilful mixing of different grades of cotton is well known. The cheapest grade is used as much as possible in spinning cotton yarn of desired counts, in consideration of the price of raw cotton of the different countries and the nature and price of cotton yarn to be spun, and thereby to lower the cost of production. The adoption of the one process system of mixing and blowing in the process of opening, mixing and batting or blowing, the "simplex" in the process of slubbing, intermediate and roving and the highdraft in the process of spinning has effected considerable economy in the labour required in cotton spinning. It is reported that while the cost of producing one bale of cotton yarn of 20 counts was 25 yen in a mill with 30,000 spindles equipped in the old way, it was 22 yen in the case of the same mill equipped with highdraft spinning frames and 20 yen in that equipped with both highdraft and simplex frames. Considerable improvement has also been made in respect of maintaining the most suitable temperature and moisture in the spinning process.

A remarkable improvement has been made in the weaving department with the introduction of the automatic loom. About 80 per cent of the looms in Japanese weaving factories under the management of spinning concerns are estimated to be automatic. A person usually operating anywhere between 4 and 6 power looms at a time, can manage anywhere between 20 and 30 automatic looms and a skilled worker from 40 to 50.

The Japanese cotton industry is also highly electrified in the direction of lighting plants and generating motive power. According to the Japan Cotton Spinners' Association, while only 50 percent of the power consumed in spinning mills in 1922 was electric, this increased to 88 per cent in 1929 and 97 per cent in 1933.

Considerable improvement has also been made in technical skill in local weaving concerns. Special attention has been given to simplification and standardization of products. As an example of improvement in machinery equipment for better efficiency, the instalment of automatic stop equipment in workshops whose scale is so small as does not permit to introduce automatic looms may be mentioned. In this way the number of looms operated by one worker has been increased to 8 or even 12. It is even reported that as a result of these improvements the cost of production in certain local weaving concerns is 20 or 30 sen per roll lower than that in large scale weaving factories.

Similar information is given on other topics.

Khan Abdul Gaffar Khan and Bengal

"If the Government do not allow me to go to the Frontier, I shall settle in the heroic land of Bengal and devote myself to village work." This welcome announcement was made by Khan

Calcutta, Oct. 5.

Khan Abdul Gaffar Khan

Foundation of Indian Physical Society in Calcutta

A Society under the name of the Indian Physical Society with the object of promoting the progress and upholding the cause of Physics in India has been established in Calcutta. The Society will publish books, journals, and translations relating to original researches in Physics and associated sciences and will co-operate with other scientific bodies, institutes or academies of national importance,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In his inaugural address the President erred to the importance of original research sciences and said that about 35 years ago lcutta was the only centre of scientific search in India. The centres have now reased in number, in Calcutta as well as in her parts of India. He referred to the istence of societies in India and abroad and d that the inauguration of the Physical ciety will supply a long-felt want. He ther added that it was a happy sign that minent physicists from all over India have reed to lend their cordial and active support the cause of the Society.

The office-bearers of the Society for the rrent year are : President—Mr. B. M. Sen, A., I. E. S., Principal, Presidency College, lcutta ; Vice-Presidents—(1) Prof. J. B. ah, M. A., I. E. S., Professor of Physics, vernment College, Lahore ; (2) Prof. Kamta rasad, M. A., I. E. S., Professor of Physics, ience College, Patna ; General Secretary—of. D. M. Bose, M. A., Ph.D., Head of the ysics Department, University College of ience, Calcutta ; Treasurer—Prof. P. N. ose, M. A., Ph.D., Sc.D., Ghose Professor of plied Physics, University College of ience, Calcutta ; temporary head-quarter of Society—92, Upper Circular Road, lcutta.

The first regular meeting of the Indian ysical Society for the reading and discussion scientific papers was held on Sunday at M. at the Hall of the Indian Association the Cultivation of Science. Twenty papers taining results of original investigations in ious branches of Physics were communi-ed from different parts of India. The ge of subjects was wide and interesting and luded topics on structure of molecules and crystals, Band Spectra and Magnetism. veral distinguished physicists and a large mber of persons interested in physics tended.

velopment of the Fruit Industry U. P.

The value of fruit in diet is coming more d more to be recognized. Physicians have en recommending fruit increasingly. But ny of the fruits recommended are not sufficiently low in price to be consumed by ordinary people in sufficient quantities. Therefore, the growing and marketing of fruit should be organized and developed. India possesses such varieties of soil and climate that there is scarcely any kind of valuable fruit which cannot be grown in some province or other. Years ago the late lamented Sister Nivedita contributed an article to this journal pointing out how the Himalayan slopes in Darjeeling district could be utilized for growing many kinds of delicious and health-giving fruit.

Exhaustive notices on fruit development and the marketing of fruits in the United Provinces prepared by Mr. R. E. Allan, Director of Agriculture, now on leave in England, were discussed and fully approved at a meeting of the Executive Committee of the U. P. Fruit Development Board held recently in Lucknow. Mr. P. B. Richards, the present Director of Agriculture, United Provinces, presided.

Valuable suggestions for the development of fruit industry in the Provinces have been made by Mr. Allan, who in his report states :

There is ample scope in these Provinces for organized improvement in the manner in which we grow our fruit and in the methods by which we dispose of the produce of the orchard. Improvements which would lead to increased consumption by lowering the cost per acre to buyer but which by increasing the amount of saleable fruit per acre and by preventing undue dissipation of profits between the grower and buyer would markedly increase the return each of the former secured from his gardens.

For the most part it must be accepted that in comparison with other fruit areas of the world we are very far behind in all matters concerned with orchard management and disposal. We have a tremendous lee-way to make up. On the other hand, we cannot hope to run before we can crawl and it is only by a process of development that it appears possible to build up an organized industry and to give full effect to the advantages bestowed on us by nature in the form of soil and climate. The majority of our fruit is grown by a class who are capable of appreciating better methods and of giving effect to those if so inclined.

Dealing with the question of marketing of fruits in the United Provinces Mr. Allan says :

The individual orchard has to be improved or laid out ; the control of the garden has to be tighter ; the methods of grading and packing have to be learnt ; more members must be enlisted ; the Agriculture Department periodicals at present the organ of the Fruit Board should be subscribed for. Steps should be taken to educate boys in the school on the value of fruit in a diet. A good deal of local activity will be needed to raise even the minimum funds of an effective producer society

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and still greater activity to convert this to a producer and disposal society.

With the Central Board, it is true, rests the building of the organization the tackling of railways or other bodies or authorities with which production and sale may be linked but a Central Board, acting with a full body of virile activity behind it, is a very different body to one in which its members and associated societies are half moribund. Success, therefore, rests with each grower of fruit himself."

What is true of the United Provinces is true of other actually or potentially fruit-growing areas also.

Agricultural Research in Bengal

A Press Note circulated by the Press Officer, Bengal, tells the public what is being done in the province in the sphere of agricultural research.

Since the establishment of the Imperial Council of Agricultural Research, Bengal has been receiving grants from it for promotion of agricultural research. The following note will give an idea of the work done in Bengal.

A sum of Rs. 5,702 was sanctioned for the investigation of the possibilities of improving cane crushing and boiling plants utilized in the production of sugar by the open pan system. As a result, an approved crusher designed to crush one ton of cane per hour is now on the market and has proved very successful, not only on account of the high quantity of cane it can crush per hour, but on account of high percentage of juice extracted. It is, moreover, the cheapest mill on the market of its capacity. The boiling plant produces rab of high purity suitable for spinning white sugar.

In addition to the grant for sugar machinery, the Imperial Council of Agricultural Research has provided Rs. 13,050 over a period of 5 years, for a sugarcane testing station.

As regards rice research it is stated :

Although Bengal imports rice, she also exports rice, not only to European markets, but also to Eastern markets, such as Mauritius, Ceylon, Aden and the Gulf. To enable the Bengal Government to expedite the work which has been commenced on commercial rices, the Imperial Council of Agricultural Research sanctioned a scheme which is now working, costing Rs. 2,18,772 spread over a period of 5 years. Work is being conducted at Chinsurah on the Patnai paddies of European trace, and at Bankura or the Western Bengal paddies which are exported to Eastern countries. It will be some years before this work is completed ; but, even in the short time that the scheme has been in operation, valuable results have been obtained.

The feeding of cattle is also receiving attention.

The feeding of cattle in Bengal is, as a rule, restricted to paddy straw, what grazing they can pick up, and a small ration, on occasions, of oil-cake. The Imperial Council of Agricultural Research has provided a sum of Rs. 48,590 spread over a period of 5 years, for an investigation into the requirements in the way of fodder and grain of Bengal cattle to maintain themselves and, at the same time to be efficient work cattle. The investigations have so far been of very high value, and the information which has been obtained shows that even with a slight increase in the green fodder ration, the efficiency of the stock is raised. Paddy straw alone is not even a maintenance ration. Green fodder must be supplied to the cattle before they can do the work which is required of them. In Napier grass, the Bengal Department of Agriculture has found a green crop which gives enormous yields. It can be grown on spare land and can supply the deficiency which has been shown in the results obtained during the experiments at the Nutrition Section at Dacca.

The combination of two important bye-products, which at present are of little or no value—molasses & *cura*—with the addition of lime, form a most excellent cake for the stock. A complete ration has been produced by adding a protein to the two carbo-hydrate ingredients in the cake.

Physical research on soils is also being carried on.

Both the Calcutta University and the Dacca University have received grants from the Imperial Council of Agricultural Research to co-ordinate the work between the two Universities and the Agricultural Department, the Council sanctioned a grant of Rs. 22,568 for physical research on soils. In Bengal, with its high rainfall and humid climate, the investigation of soil conditions is of the utmost importance. The investigation of soil conditions is also very complicated owing to the changes in the course of rivers during its formation. The silt brought down by one river is physically and chemically different from that brought down by another ; and, in many cases, these have mingled on account of the changes in the courses of rivers.

We have read in the late Mr. Nitya Gopal Mukerji's writings and have been also reliably informed recently that the soil in many parts of Bengal is fit for growing high grade cotton. The Bengal Agricultural Department should issue a note on the subject in Bengali. A paragraph on fruit culture follows :

Bengal has never been able to pursue research into problems of fruit culture. A grant has just been received from the Imperial Council of Agricultural Research to enable the establishment of a Horticultural Research station at Krishnagar. The importance of fruit, not only from the point of view of the fruit farmer, but as a subsidiary crop to the general cultivator is enormous. The improvement of varieties of the crops grown in the Province, the introduction of fruit crops not grown after the conditions preventing their growth have been investigated, and the marketing of the crops grown are subjects which are being taken in hand.

Some chemical problems relating to soils are also being tackled.

At the Calcutta University, Prof. J. N. Mukherjee has been assisted by a grant of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Rs. 14,109-12-0 to investigate the physical problems in connection with soil colloids. The work that has been conducted by him and his Assistants has been recognized in that the Advisory Board has proposed that further grants should be given for the development of his schemes.

Dr. A. T. Sen at Dacca, working under Prof. J. C. Ghosh, has been developing two schemes—

(1) for the development of new methods of analysis of the soils, and

(2) examination of the chemical constituents affecting the nutrition value of rice.

Lord Irwin on the Work of Christian Colleges

Lord Irwin, late Viceroy in India, is now Lord Halifax. In the last week of September he spoke at Leeds on the work of the Christian Colleges in India. Two brief reports, one telegraphic and the other sent by mail, have been received in India. The substance of the former is given below.

> Viscount Halifax, the principal speaker, said that the main work of Christian missions had not been reflected in direct conversions but in the presentation of Christain life as seen in practice. It is not too much to say for Western civilization that the evolution and acceptance of public conscience, justice, fair dealing, toleration and chivalry were all products of Christianity. Viscount Halifax pointed out that the youth of India to-day would provide the rulers of India for the next fifty years. Power will be in the hands of the educated classes and they would come from Indian colleges and universities.
>
> The Christian colleges alone could provide what in the Western world had given true civilization and citizenship.—*Reuter.*

The majority of British and other European Christians in India are not Christian missionaries. That many Christian missionaries lead lives which are a presentation of Christian life in practice is true. But their effect is more than neutralized by the worldly and in many cases worse lives led by the aforesaid majority. History does not support the claim that the evolution and acceptance of public conscience, justice, fair dealing, toleration and chivalry were, as parts of Western civilization, *all* products of Christianity. The Inquisition, Slavery and the Slave Trade, Imperialistic and Industrial Wars, discrimination against Jews and various Christian sects, etc., were some time or other, advocated by the clergy or laity of either all sects or the clergy of some sects. Colour prejudice and race hatred, as directed against Asiatics, did not prevail in pre-Christian Europe as they have prevailed in recent centuries of the Christian era. By all this we do not mean to say that Lord Halifax's claim is entirely unfounded. What we mean is that the credit he gives to Christianity cannot be claimed in its entirety.

Then again when he asserted that the Christian Colleges *alone* could provide what in the Western world had given true civilization and citizenship, he made an incorrect statement, because other colleges also, which form the majority, along with many other forces and factors, can provide and have provided these things.

Turning to the report received by mail, we find he said :

> It was essential for us to win and hold the confidence of India. He went on to say that unfortunately, India was a matter of acute political controversy but so far as he was aware, there was no disagreement in any quarter as to the ultimate goal that we wanted to reach in our dealings with India, and the consequence of that goal must be the casting of ever greater responsibility for their own government upon the shoulders of Indian men and women. How best could we help India to discharge that growing burden on the constitutional side ? The whole question was being examined by both Houses of Parliament, and he had no doubt that when it made its report Parliament would give its most earnest consideration to what might be the best method of helping India.

So far as our knowledge goes, there *is* disagreement among Britishers as to the "ultimate goal." Lord Halifax had no doubt that Parliament would give its most earnest consideration to what might be the best method of helping India. We are afraid the majority of present M. P.'s and other Britishers would agree in holding that India would be best helped by strong rule by Britain.

Lord Halifax also said :

> Nobody who had reflected upon or lived in India would doubt that the force that would ultimately decide the success or failure of any constitution would be the character and the spiritual qualities of the Indians who would work the constitution that Parliament might pass. India stood pre-eminently in need of this new spiritual strength. All the best of her sons to-day were consciously or unconsciously crying out for a higher spiritual fellowship. This spiritual fellowship was the best thing one could give to India. There, as elsewhere, youth was on the march and the future was going to be immensely affected by what youth said, thought and did. If they agreed with him in thinking that it was the students passing through the colleges who were going to have this great machine in their hands in years to come, then the Christian colleges were placed in a unique position for exercising influence.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

His general observations are true, but it cannot be admitted that the Christian Colleges held any unique position.

> The main work of missionary effort in India had not been reflected in direct conversion to Christianity. Individual conversions were taking place, and he did not wish to undervalue all that was happening by way of mass movements producing in some cases phenomenal results. The Christian religion filled the place of the third largest religion in India. But he thought that the main effort of all missionary work had been to present Christianity as seen in practice, ministering to the sorrowful, the oppressed, and the needy to open the eyes of India to a truth that it was very difficult for Indian thought to comprehend, the truth of value of each human personality in the sight of God.

Have the bulk of white Christians, particularly of the imperialistic and industrial nations, realized the truth of the value of each human personality (of coloured Asiatic and African peoples) in the sight of God?

This truth was realized in India, too, and that even before the birth of Christianity.

Lord Halifax concluded by observing:

> India and its problem was easily the biggest thing that this country had tried to solve. There were many people who had misgivings and even great fears about it, but there were other people who thought that faith was likely to be a better solvent than fear and that it had been through faith that all our biggest Imperial achievements had been won. He felt the greatness of the opportunity given to this nation to-day to go to India and say that these colleges were merely giving them that something which was essential to the success of the great effort upon which they and we were commonly engaged, and if they would accept our services, we, in England, would gladly give them of our best.

Railways and Rival Transport Service

Speaking at the 31st session of the Indian Railway Conference Association, Sir Joseph Bhore, the Railway member, said:

> Whatever may be the strictly narrow Railway view of such competition, present and prospective, we must all admit that in the larger interests of the country it is good that it should exist, for it is only through such rivalry can the public be assured of the maximum efficiency in service at a minimum cost.

This is a reasonable view.

Increase of population in Britain and Marriage

Regarding the excess of births over deaths in Britain during recent years the *Manchester Guardian* observes:

> Britain, in a word, will shortly be faced with a situation she has not known for many centuries; an expending population has been normal with us since Elizabethan times; we doubled ourselves between 1800 and 1850; doubled ourselves once again between 1850 and 1910.

It has been estimated that the population of Britain will reach its maximum about 1940 and then the decline will commence.

Is it for that reason that, according to a special correspondent of the *Daily Mail*, Sir Michael Sadler expressed his firm conviction that London University would in future be the greatest University in the British Empire and it would have one compulsory subject—marriage? This is what he actually said, in part:

London's Destiny

> One day it will be the most famous and influential of English universities, because of the wealth of the metropolis, its supremacy in the possession of great cultural collections, its geographical convenience, and its tremendous attraction to foreign students.
>
> It will become not merely an English university, but the University of the Empire.
>
> Sir Michael made it clear that he did not think either Oxford or Cambridge would ever deteriorate as a centre of learning.
>
> 'A hundrd years from now,' he declared, 'Oxford will still be enjoying its rich and noble heritage. But it will no longer be one of the favourite twin-daughters of the state!'

Greek Ideal

> He forecast the abandonment of all the ideas of a 'liberal education' that have been accepted and conformed to for so many generations past.
>
> It is his belief that there will be a reversion to the ancient Greek ideal in education—the attainment to perfect harmony between body and mind and spirit.
>
> 'This will mean the training of the body in fitness, grace and self-control,' he explained.
>
> 'In every aspect of life, of conduct, and of aspiration, the body is linked to the mind; and intellectual and emotional education must spring out of physical culture.
>
> 'It is no real liberal education which denies the body, or is furtive toward it.'
>
> He smiled as he added: 'If you could come back to University College in the year 2010, you would see here just as many young men as were here in 1934—but you would hear the Dean saying to them: 'Gentlemen, there is only one course that is compulsory; and the subject of that course gentlemen, is—"marriage"!'

Australia's Congratulations to "India's" Naval Forces

On the occasion of the inauguration of the Royal *Indian* Navy, the Australian Naval Board sent congratulations to the naval forces

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in India upon their new designation of "Royal". As India has been given a Navy for Britain's use, and as it is predominantly non-Indian in composition, the congratulation seems worse than a joke.

Madras "Non-Brahmin" Party to Admit Brahmins

The Justice party of Madras, generally known as the Non-Brahmin party, has decided to make Brahmins also eligible for its membership. This is a step in the right direction.

Entry of Sixteen Papers into Hyderabad Banned

A new or an old order, it is inmaterial which, of His Exalted Highness the Nizam, has banned the entry into his state of sixteen Indian papers, including some of long standing and established reputation. This fact shows that he does not want that the administration of his state should improve. No individual man is infallible, far less a collection of individuals. And the administration of all states, big or small, is carried on by a large number of individuals. They may all require correction.

Assassination of King Alexander and M. Barthou

The assassination of King Alexander of Yugoslavia and of the French statesman M. Barthou in France are melancholy events. It can only be hoped that the assassination of the King will not lead to or precipitate any war.

It is little consolation to the innocent multitudes of sufferers in Bengal from strong rule to have fresh proofs of the well-known fact that anarchists or terrorists or revolutionaries are not a monopoly of Bengal, and that the fact of their existence is not a provincial but almost a world problem.

Militarism from the Cradle

While pacifists the world over are cogitating how to outlaw and banish war, Signor Mussolini has formulated his scheme for seeing that from the cradle to the grave every Italian child is imbued with the fighting spirit. From the age of eight, if not earlier, they are to be prepared for war. They are to be taught its virtues and to grow up as warlike as beasts of prey.

Mass Education in China

According to Reuter,

> The system of mass education is being revolutionized in China.
>
> Because of the lack of teachers, specially women teachers, and of other problems caused by tradition, students are being made into teachers, and the move has met with unprecedented success.
>
> The students attend school during the day, and go out at night to teach, instructing both young and old. Some of the great difficulties of Chinese education have been solved by this method.
>
> The "child-teachers" have been most effective among women. In one family, for instance, a six-year-old grandson taught his 60-year-old grandmother how to read in a short space of time.
>
> There are 27 child teaching centres in China, several of which have been operating successfully near Shanghai.

If mass education were attempted in India, all the unemployed graduates and undergraduates (including matriculates) would find employment. Children, in any case, would not have to become school teachers. But as our Government is not national, who is going to tackle the job?

Two hundred Nationalities in One State

British objectors to India's being or becoming a nation and achieving self-rule point to the numerous linguistic, religious and caste groups in this country as insuperable difficulties. But in Soviet Russia the diversity is far greater. On the occasion of that state's admission as a member of the League of Nations, M. Litvinoff, its representative, said:

> The idea in itself of an association of nations contained nothing theoretically unacceptable for the Soviet Union, which was itself a league of nations in the best sense of the word, uniting over two hundred nationalities. He claimed that never before had so many nations co-existed so peacefully within a single State, never before had so many nations in one State had such free cultural development and enjoyed their own national culture as a whole and the use of their own language in particular. There were neither national majorities nor minorities in the Soviet Union, and this on territories where before the Soviet regime all nationalities except the dominating Russian were being stamped out by violence and repression. At the present time the periodical press in the Soviet Union came out in fifty languages. The Soviet States had never excluded the possibility of some form of association

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with States having a different political and social system so long as there was no mutual hostility and if it was for the attainment of common aims.

France's Loss.

Last month within a few days France has lost two of her statesmen, M. Raymond Poincare and M. Barthou. The death of the former was natural, the latter was murdered. The former had retired from active political work after a very distinguished career, but the latter was still in the saddle.

Truthfulness in Politics

When Mahatma Gandhi wanted to substitute the words "truthful and non-violent" for the words "peaceful and legitimate," in the article defining the object of the Congress, we think he used the word "truthful" in the ordinary everyday sense. Therefore it seems to us unnecessary to investigate the philosophical difference between relative truth and absolute truth and whether the latter is attainable. Truthfulness is necessary in politics and even if not attainable under each and every circumstance, should be our ideal.

As for non-violence, even if it be not attainable in thought by ordinary individuals, it is not so very difficult of attainment in deed and in word. Every ideal is difficult of realization. It would not be an ideal if it were quite easy to realize. It is far better to have an ideal and to fail to come up to it even after strenuous endeavour and thus to expose oneself to ridicule, than not to have any ideal at all.

Mahatma Gandhi's contemplated Retirement from Congress Leadership

Writing before the meeting of the Congress at Bombay we do not want to discuss Gandhiji's statement describing and explaining why he wants to retire from its leadership. We only want to say that there is at present no other leader who can keep together and lead so many persons as he, and therefore his retirement would be a loss to the country and the Congress.

We wholeheartedly support that portion of his statement in which he explains why he wants the organization of an All-India Village Industries Association.

Forty-Eighth Session of Indian National Congress

The 48th session of the Indian National Congress was held at Bombay in the last week of the last month. In spite of the great difficulties, described in the speech of Mr. K. F. Nariman, Chairman of the Reception Committee, which the Committee had to surmount, the preparations made on a lavish scale for the holding of the session were satisfactory, as we can personally testify. But instead of giving our own impressions, we prefer to give the description of a hostile witness. In its long editorial article *The Times of India* cries down the Congress, pours ridicule on it, and says that its President and other Congressmen "are palpably ignorant of its contents!" But in giving a rather full summary of his presidential address on another page the same paper prints in big type the heading, "Congress President's Elaborate

Analysis of White Paper!" So in the opinion of this paper a man can give an "elaborate analysis" of a document, though he is ignorant of its contents. This journal gives the following description of the "impressive scenes at Congress opening":

> The 48th session of the Indian National Congress which began in Bombay, on Friday evening, can only be described as a unique success from the spectacular point of view. The organizers left no stone unturned to make it so. The open amphitheatre, designed to seat 60,000 persons, though not packed to capacity, was nearly full. The number of two-rupee visitors' tickets sold was 35,000. Add to this number about 2,500 delegates, 1,800 Reception Committee members and an equal number of men and women volunteers, 600 press representatives and 300 special class visitors who had paid sums ranging from Rs. 100 to Rs. 5,000 for the honour of sitting near the President's dais, not to mention quite a number of people who had gained admission by other means.
>
> The control of this phenomenal crowd and the regulation of traffic within the Congress grounds including the pandal was carried out entirely by the volunteers. As was to be expected, there were several tense moments during the protracted proceedings when the crowds threatened to go out of hand. A mobile company of well-drilled volunteers with lathis was at once rushed to every scene of disturbance, and order was restored with the minimum of force.
>
> IMPRESSIVE SCENE
>
> The arrival of the president in procession headed by the Congress band and escorted by the members of the Working Committee and a volunteer corps as well as the guard of honour furnished by the Desh Sevikas in pretty saffron coloured sarees and armed with lathis presented a very impressive picture. A national song by a noted singer and a welcome song sung in chorus by a batch of girls marked the opening of the session. Then followed the addresses of Mr. K. F. Nariman, Chairman of the Reception Committee, and Babu Rajendra Prasad, the President.
>
> The speakers addressed the Congress from a brightly lighted and decorated rostrum erected in the centre of the amphitheatre. It was equipped with a microphone, and flood lights were directed on each speaker from different angles so that he could be heard and seen from all parts of the huge enclosure.

Babu Rajendra Prasad's Speech

The selection of Babu Rajendra Prasad to fill the presidential chair this year was unexceptionable and commendable from all points of view. We should rather say that, if he had not been elected this year, it would have been a clear dereliction of duty on the part of Congressmen. He has made great sacrifices for the national cause and undergone much suffering and persecution. His services in connection with the Bihar earthquake and floods are too well known and recent to need recounting.

He is meek and mild, but firm withal, as his conduct of the proceedings of the Congress shows.

We can here call attention to only a few passages in his presidential address.

Returning from the second so-called Round Table Conference, Mahatma Gandhi twice requested Lord Willingdon for an

Babu Rajendra Prasad
Reproduced from a pencil sketch by Mr. Kanu Desai

interview, but the latter refused to grant him an unconditional interview. In the words of Babu Rajendra Prasad, regarding the period of economic depression through which the country has been passing, the President observed:

> The country has been passing through a period of deep economic depression, which has been intensified by the Government policy of managing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian affairs in the interests not of India but of Great Britain. The past few years have seen great distress of the peasantry unable to pay the heavy land revenue and rent and suffering great privations. They have witnessed curtailment of expenditure on nation-building departments, great slump in industry, export of more than 200 crores of distress gold, dislocation of trade and a tremendous increase in unemployment the extent of which even in the best of normal years the British Government have never dared to ascertain owing to its vastness. These years have been remarkable for heavy additions to the so-called Public Debt of India and the burdens of the already overtaxed tax-payer and the poverty-stricken population for carrying on an extravagant and top-heavy administration and partly for suppressing and crushing the movement for freedom.

The Ottawa Pact, which has been condemned with one voice by the best-informed opinion in the country as being detrimental to the best interests of India, and particularly of the masses of agriculturists, was ratified. Its working has proved that the apprehensions of its critics were well-founded. It has successfully tied India to the chariot wheels of the British policy of Imperial preference.

In his opinion,

The position of our countrymen abroad gives no ground for satisfaction. Their treatment in the colonies of the British Empire has been a long-standing cause of just grievance and has influenced not a little the change in our outlook and opinion in favour of complete independence. One after another, Indians settled in these colonies and protectorates are being deprived of their inherent rights to which they are entitled by virtue of their long association, service and contribution to the prosperity of these colonies. They have, in fact, been instrumental in many cases in building up these colonies and many have been born in them and have their homes without any other in the world. One scheme after another is devised to get rid of them after they are no more needed, and although it is some consolation to know that the scheme of assisted repatriation has been given up, it is also to be noted that no place is found in the vast British Empire where they can live and settle with the same full rights to land and citizenship as others have in India. The latest application of this policy of squeezing out Indians is reported from Zanzibar where in spite of the best of relations which Indians have maintained for generations with the Sultan and his subjects, ordinances have been hurriedly passed, which deprive them of the rights of acquiring land. The discrimination against Indians becomes flagrant when we know that this restriction does not extend to the new arrivals from Arabia. There is nothing surprising in all this when we know that Indians do not enjoy even elementary rights of citizenship in their own country and which even the proposed constitutional reforms are not going to confer on them. We can only give this assurance to our countrymen abroad that as our position at home improves their position will also automatically improve. In this connection it is impossible not to mention with gratitude the great name of Dinbandhu C. F. Andrews, who has been frequently going to Africa to render such help as has been possible for him to render.

As regards the Government's so-called "Dual Policy" of "Constitutional Reforms" and of Repression, Babu Rajendra Prasad has shown the deceptive and illusory nature of the former and the stern and real character of the latter.

He has criticized the White Paper proposals in detail, judging them in the light of four tests, namely,

> (1) How far the proposed new legislatures will be representative of the nation; (2) How far the powers alleged to be transferred to popular control are real in the centre and the Provinces; (3) What the Powers proposed to be transferred in regard to the Finances are, and what additional burdens India will have to bear for the new constitution, and (4) whether the proposed constitution contains within itself any elements of growth and development.

And his verdict in every case is adverse.

In connection with the suspension of Civil Disobedience as a mass movement, says the Prsident,

> Two weaknesses seem to me to have dogged our footsteps.
>
> Firstly, the Congress workers had been gradually and perhaps unconsciously led into adoption of methods of secrecy, which reduced what would have been an open battle of defiance into a battle of wits: It was not realised that *Satyagraha* is essentially a fight on a higher moral plane in which suffering is openly courted and cheerfully borne and which aims at conquering the opponent by an appeal to his moral sense and in which any attempt to over-reach him rebounds with fatal effect on the Satyagrahi himself.
>
> Secondly, it must be also admitted that the attack of the Government on a vulnerable point succeeded. People were not prepared to lose property to the extent they were prepared to lose liberty and even life, and when heavy fines and sequestration of property in lieu of fines and confiscations started on a wholesale scale, gradually demoralization set in and ultimately broke the back-bone of the movement. Attempt was made to continue the struggle by confining it to those individuals who had faith in it, and taking it out of the methods of secrecy. That partly explains the Poona and the Patna decisions.
>
> It has had to be suspended in the very interests of the movement and those of the country. The principal reason was our own weakness, and yet I do not feel that there is any reason to be downhearted.

Regarding Mahatmaji's retirement from the leadership of the Congress, the President's advice is :

> You should remove from your minds any apprehension that you may have that he is going to retire from public life or that by not being physically connected with the Congress his interest will cease or that his help will not be available. I have no such apprehension. . . . . I do not minimise the effect of such a decision, if he comes to it, but I wish you to have faith in him and I have no doubt that all will be right, whether he decides within or from outside the Congress.

Babu Rajendra Prasad's Reception Procession

In conclusion Babu Rajendra Prasad says among other things :

Let us not, however, be led away by the idea that Swaraj can be achieved by anything we could do in the legislatures. We have to remember that the price for freedom must be paid before we can get it, and while we have every reason to be proud of what has been done and what the country has suffered, it is, after all, yet inadequate for the great object we have in view. The task we have taken upon ourselves is great and glorious. It requires inexhaustible patience, unflinching determination and unending sacrifice. Time and world forces are helping us and, above all, God is with us in this great epic struggle of an unarmed people fighting, with the weapons of Satyagraha of Truth and Non-Violence—a most powerful Government armed cap-a-pie and equipped with the latest engines of destruction devised by science and human ingenuity. For us there is no turning back. The goal is clear. It is nothing short of Independence.

Independence is the natural outcome of all that the freedom movement in India has stood for. It cannot mean isolation particularly when we remember that it has to be achieved by non-violence. It means the end of exploitation of one country by another and of one part of the population of the same country by another part. It contemplates a free and friendly association with other nations for the mutual benefit of all. It forebodes evil to none, not even to those exploiting us except in so far as they rely upon exploitation rather than goodwill. The sanction behind this Independence movement is non-violence which in its positive and dynamic aspect is good will of and for all. We already see signs of how it has begun appealing to a certain extent to world opinion. This appeal has to become irresistible.

Reply came to this last moment request in the form of warrants of arrest for himself, the Congress President, Sardar Vallabhbhai Patel, and other prominent Congressmen throughout the country.

The Congress was taken unawares and the Government expected that they would be able to crush the whole movement within a fortnight. In spite of want

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of preparation, in spite of sudden removal of all the prominent Congress workers throughout the country within a few days to prison, when they were not able to give instructions to their followers as to how to organize the campaign, it must be said to the credit of the nation that the lead, which had been given by the Working Committee, was faithfully and spontaneously followed. Thousands again courted imprisonment, *lathi* charges, firings, heavy fines, confiscation of property, and beatings on an extensive scale.

The movement was not crushed and went on for months and months without a break to the bewilderment of officials, who had hoped to crush it in a few days. Special sessions of the Congress were held at Delhi and at Calcutta amidst arrests and *lathi* charges and in spite of the vigilance of the police, who had concentrated upon preventing them.

Mr. Nariman's Appeal to Pandit Malaviya

In the course of his speech as Chairman of the Reception Committee of the recent Bombay session of the Indian National Congress, Mr. Nariman addressed the following "appeal," as he calls it, to Pandit Madan Mohan Malaviya :

> The differences of opinion over the Communal Award have been unfortunately pushed to such a degree as to result in the formation of a distinct anti-Award group. The step that Pandit Malaviyaji and Sjt. Aney have taken has caused some jubilation in the ranks of our opponents but their joy is bound to be short-lived. Panditji's intentions are to bring the Award for an open vote and the nation can confidently trust that he and his colleagues will abide by the Congress verdict, whatever it might be. For, no one can realise to-day more fully than Panditji the need for unity in Congress ranks.
>
> Whatever the differences, however strong the personal sentiments, or even conscientious objections, all should be subordinated to the final, national tribunal. Here must end all dissensions and bickerings. Thenceforward stern discipline and loyal devotion should step in. Any opposition to the final verdict would certainly deserve the appellation of rebellion against the parent body.

There is nothing to be said against an appeal proper. But the implication in the last sentence of the extract that, if Mr. Malaviya does not abide by the verdict of the majority but follows his conscience, he would be guilty of rebellion and might be subjected to stern discipline, does not look like an appeal. Mr. Nariman will do well to remember that history has justified many a rebellion and that among the world's greatest persons there have been many rebels. We would also call Mr. Nariman's attention to the lines of James Russell Lowell quoted by Babu Rajendra Prasad, to be understood of course in a figurative sense in the present case—

> *"Truth for ever on the scaffold*
> *Wrong forever on the throne*
> *Yet that scaffold sways the future."*
> *And behind the dim unknown.*

Congress and the Communal Decision

Both the Subjects Committee of the Congress and the Congress in full session at Bombay have, by a large majority, maintained the neutral attitude of the Congress Working Committee towards the Communal Decision ;— they neither accept nor reject it. They hope to replace that Decision by an agreed settlement. The future will show whether any such agreed settlement will replace the Decision, and whether that substitute will be a purely "National" solution, or will be more or less Communal in character than the British Government's Decision.

Congress Parties and the Communal Decision

No Congress Party, by whatever name known, approves of the Communal Decision. There is no difference of opinion among Nationalists, whether Congressmen of any description or Liberals or members of other Nationalist bodies, as to its dangerous and mischievous character. All want to get rid of it. The difference is only as regards the methods and means to be adopted for its rejection. Whatever method and means succeed, the result should be welcome to all Nationalists.

Purchase of Stores for India

It is stated in the report of the Indian Stores Department, London, for 1933-34, that 96.771 per cent of the contracts placed by it were with British firms. That is very good news for Britishers. But were the contracts placed with British firms because they were British, or because among competing firms their goods were, quality for quality, the cheapest in the market ?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

For years, India has been in a position to supply her railways, army, etc., with many classes of goods of standard quality at competitive prices. Still they are not purchased in India for the most part. No national government would have tolerated such a state of things.

Panjab Relief from Indebtedness Bill.

Last month the report of the Select Committee on the Panjab Relief from Indebtedness Bill was presented in the Legislative Council.

Besides official members who reserve the right to move amendments, the report is signed by the majority group consisting of zemindar members, Mr. Chhoturam, Mr. Akbar Ali, Sardar Buta Singh, Mr. Riasat Ali, Mr. Bishan Singh, Mr. Mohammed Hayat and Mr. Habibullah, and three urban members, Mr. Manohar Lal, Mr. Mukundlal Puri and Raja Narendranath, both appending minutes of dissent.

It is agreed unanimously that the Bill has been so altered as to require re-publication.

The changes suggested by zemindar members relate to the reduction of interest, reduction of principal, exemption of a judgment debtor from arrest, exemption from attachment of certain classes of property belonging to a debtor and reduction of the period during which proceedings can be taken. They state that the debt burden of the agriculturists is stupendous, being modestly estimated at Rs. 200 crores. At the rate of 15 per cent the annual interest on debt liabilities will be Rs. 30 crores. They point out that while even the annual land revenue amounting only to Rs. 3 crores is universally described as burdensome and 50 per cent reduction thereof is advocated by all, the burden of interest debt which is 10 times heavier is rendered three times more unbearable through the fall in agricultural prices to a third of the boom period rates. They fear that the insistence of the moneylending interests on a pound of flesh is a menace to the peace, security of life and property of the province.

"UNJUST AND UNWISE"

Urban members describe the Bill as changed as a wholly unjust and unwise measure. They state that while reducing the amount of debt it has not only made no provision for payment of those reduced debts but has actually made the recovery of the loans more difficult. They declare that the Bill in wiping the present debts furnishes no solution to the Punjab's agrarian and financial problems and conclude that the measure is likely to impair rural credit seriously, if not destroy it very largely, and will not touch even the fringe of the important question of rural betterment of the Punjab.—*Associated Press.*

The suggestion of the "Zamindar" members, if carried out in their entirety, would amount practically to confiscation of part of the money lent by the money-lenders, who certainly could not and did not force anybody to borrow. Reduction of interest is allowable, but if the principal has also to be reduced, this can be justly done only if Government will pay to the creditors the portion remitted.

U. P. Scheme for Recruitment of Graduates in Government Offices

The scheme which the U. P. Government have formulated for the recruitment of graduates in Government offices for increasing the efficiency of divisional and district offices is commendable. There should be such schemes in other provinces also. When graduates are available even on small salaries it is uneconomic, unstatesmanlike and unreasonable to appoint others less qualified than they.

Pandit Madan Mohan Malaviya's Candidature

It is greatly to be regretted that Pandit Madan Mohan Malaviya's candidature for the Legislative Assembly was invalidated on a technical ground. It does not speak much for the efficiency of those who prepared the electoral rolls for Allahabad that the name of the first citizen of the province and the oldest active leader of India could not be found there. The Pandit's staff also are responsible for the situation to some extent. They ought to have found out and rectified the omission. But perhaps they never dreamed that such an omission could occur. We hope the representation and reference which Pandit Malaviya has made to the proper authorities will result in the removal of obstacles in the way of his candidature.

Mr. C. Y. Chintamani Not Seeking Election

That Mr. C. Y. Chintamani has not sought election to the Assembly owing to ill-health is a misfortune to the country. He is a very able parliamentarian and a very well-equipped fighter for the nation's cause.

Ten Years Plan Suggested for Universalization of Education

Presiding over the 13th session of the United Provinces Secondary Education Conference held at Allahabad last month,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Professor Dr. Beni Prasad in his presidential address, laid great emphasis on the universalization of education up to the age of 15 or 16. While it was now superfluous to dilate on the abstract values of education as such he said that public opinion and the Government had yet to understand the new perspective in which the whole problem of education had been placed by the advance in the physical and social sciences.

Education, or self-realization was pre-eminently a social affair, a function of social organization and therefore, society ought to be so organized that every man and woman might enjoy an equal and maximum opportunity of development and, as a foundation for this, every boy and girl must have the benefit of free education at least to the age of 15 or 16.

NOT IMPRACTICABLE

"This entails," Dr. Prasad explained, "the abolition of poverty and child labour and the provision of a high margin of remuneration, leisure and security. No longer is it correct to describe such an ideal as visionary and impracticable. A well-planned application of science to agriculture, industry and transport, can, in less than a generation, raise the whole of society clean above want or sweating labour, on to a plane of universal comfort and affluence."

In suggesting that education must be universalized, he envisaged "something like a ten-year Plan" which would aim at the rationalization and improvement of agriculture, industry and transport on the one hand and at the provision of compulsory education up to the age of 15 or 16, full facilities for further education for all, adult education and libraries, museums, etc., on the other hand.

The execution of such a plan, he explained, required a new conception of state activity and administration in India : "an energetic organization of thought ; a series of planning commissions ; a network of functional associations and advisory boards ; legislation on minimum wages, maximum hours of work and conditions of work ; a balancing of mass production with mass-consumption and an alert and informed public opinion."

Preparedness for Hindu-Moslem Riot

It has been often observed that military "preparedness" leads to war, though military men say that the best way to ensure peace is to frighten your possible enemies by your preparedness for war. What kind of logic led the police and the military at Cawnpore to rehearse a mock Hindu-Moslem riot, described below, is not known, but we hope such preparedness does not forebode an actual riot.

Cawnpore, Oct. 4.

The Cawnpore Police and the Military practised the Riot Scheme today in the city from early morning 6-30 a.m. till 9-30 a.m. The rioters under the leadership of Mr. G. K. Handoo were supposed to have started operations in different parts of the city and the police and District Magistrate were informed. The reinforcements were immediately rushed to the disturbed areas. An encounter between the rioters and the police followed, the rioters were arrested. Thereafter, the other confederates of the rioters started trouble in other areas and the Military had to be sent for.

Mr. R. N. Marsh-Smith, I.P.S., T.P. Bhala, I.P.S., I.W. Lewis Lloyd I.C.S., H. S. Stephenson I.C.S., Hashmat Ali Cracknell, I.C.S., Balram Krishna Tandon, Magistrate, W. G. Haywood, I.P.S., B.B.S. Verma, I.P.S., K. B. Imtiaz Mohammad Khan, D.S.P., Major Hume, Officer Commanding Station, Captain Chute of the Royal Tank Corps put their heads together and the whole town was immediately divided into units.

Information is received that large crowd of Mohammedans have collected somewhere in the area known as Talaq Mohal, and Colonelgunj and it is believed, that they intend making a raid on Hindu Quarters in Sisamau. At once arrangements are made to hold the Sisamau Nala Road as to intercept this raid. The police rushed towards Kanghi Mohal and effected arrests and put down the trouble. Just then news comes that bodies of rioters have rushed into Meston Road and are looting shops. The police finds it difficult to get reinforcement for the police in all other parts of the town is busy. The troops are at once sent for from the cantonments who at once effect arrests and help the authorities in restoring order. The District Authorities, the Police officials and men and the Military displayed great intelligence, agility and high sense of responsibility in quelling the so-called riots.—A.P.I.

It is well known that robbers, terrorists, etc. utilize "hints" picked up at Cinema shows. We hope the Cawnpore mock riot has not provided such tips to future real rioters.

Mr. Visvanath Kar

The sudden death of Mr. Visvanath Kar of Cuttack has removed from the field of religious and social reform and of literature in Orissa a prominent Oriya leader. He was the president of the Brahmo Samaj in Cuttack and editor of "Utkal Sahitya," an Oriya monthly magazine.

Dr. Mrigendra Lal Mitra

In Dr. Mrigendra Lal Mitra Calcutta has lost a distinguished surgeon. He was a kind-hearted man, noted for his sociability, and was a friend of the poor and rich alike.

Dr. Ekendranath Ghosh

Another distinguished medical man whom Calcutta has lost is Dr. Ekendranath Ghosh. Though not an I. M. S., he was appointed professor of biology in the Calcutta Medical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

College. He made original contributions to that subject, as also on Ayurvedic, Vedic and astronomical subjects.

Kashmir's People's Assembly

The people of Kashmir have now been given a sort of a representative assembly and formal thanks have been given to His Highness the Maharaja for this gift. Let us hope it will be of some little use to the people of Kashmir, and will not be utilized to pass repressive "laws" for the convenience of the powers that be.

All India Anti-Communal "Award" Conference

Just before the holding of the Congress session at Bombay, the All India Anti-Communal "Award" Conference met at Bombay on the 25th and 26th October last under the presidency of Mr. Ramananda Chatterjee. Sir Govindrao Balwant Pradhan was the Chairman of the Reception Committee. Pandit Madan Mohan Malaviya delivered the inaugural address. It was followed by Sir Govindrao Pradhan's speech as Chairman of the Reception Committee. The gathering was not large, but delegates had come from all parts of the country. The President read out only portions of his speech, owing to there being not sufficient time to read the whole of it. The first two resolutions, passed unanimously, are printed below.

1. (a) Whereas the Communal Decision given by His Majesty's Government is anti-national and undemocratic, and follows no principle, divides the body politic into separate and conflicting groups to ensure the indefinite continuance of foreign domination, renders impossible the growth of national unity, militates against the very foundation of responsible government, discriminates against or favours citizens on the ground of their religions gives undue and excessive representation to some communities at the expense of others, and reduces the numerical majority of the Hindus to a statutary minority; this Conference strongly protests against the said decision and declares it to be wholly unacceptable.

(b) This Conference deplores the attitude of the Working Committee of the Congress which may be regarded as a virtual acquiescence in that decision and is a regrettable departure from the principle of nationalism which has hitherto been the proudest claim of the Congress to the support of the nation. This Conference earnestly appeals to the Congress to take a national stand on this question and to reverse the decision of the Working Committee by a rejection of the Communal Decision.

2. This Conference is of opinion that the Minorities' problem in India can be best solved in accordance with the principles underlying the system of the protection of minorities inaugurated by the League of Nations which system according to the declaration of the Chairman of the League Council, has now become a part of the Public Law of Europe and of the World.

This Conference is of opinion that no form of representation in the Legislature will be acceptable to it unless it is based on non-communal common roll irrespective of race, sex, caste or creed, provided that in the introduction of the non-communal common roll no community should be made to make any sacrifice.

Sir Govindrao Balwant Pradhan, Chairman, Reception Committee, All India Anti-Communal "Award" Conference, Bombay

Besides the speech of Pandit Madan Mohan Malaviya, perhaps the most notable speeches were those of Mr. M. S. Aney (in Marathi) and the two made by Professor Dr. Radha Kumud Mookerji.

Firdausi Millenary

The great Persian epic Poet Firdausi was born some ten centuries ago. The exact date of his birth is not known. His Majesty Riza Shah Pahlavi, sovereign of Persia, has arranged to celebrate his millenary, and representatives of various countries have been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

invited to attend this celebration. Firdausi is best known for his Shah-Nameh (Book of Kings), celebrating the lives and achievements of the pre-Muhammadan monarchs of Persia.

He is also the author of *Yusuf and Juleikha* and other poems.

Mr. Subhas Ch. Bose on Communal Decision

KARLSBAD, (By air mail).

Mr. Subhas Chandra Bose has issued the following statement through the United Press :

"I do not look upon the Communal Award, or rather the communal decision, because it is not really an Award, as a lesser evil than the partition of Bengal. And just as the "settled fact" of Lord Morley was unsettled by the people of the country through their own efforts—it is possible for the people to-day to have this decision altered if only they will exert themselves. It is a matter of deep regret that the premier national organization in India has shirked its duty in this respect in spite of the fact that the Communal Award is the most anti-national device that human ingenuity can conceive. If it was necessary for Mahatma Gandhi to stake his precious life in order to alter one small portion of this Award, it will be necessary for the people to stake their all in order to have this outrageous decision rejected by the people.

"For Bengal particularly, this is a life and death question--and if this document is put into effect, it will virtually undo the work of the last thirty years Therefore all those who regard the Communal Award as an evil should join hands in an all-India campaign for securing its withdrawal or revision."

Attitude of Mr. George Lansbury

The attitude of Mr. George Lansbury is most probably a truer index to the Labour Party's attitude than what Mr. Henderson did, as printed elsewhere in these "Notes." Mr. Lansbury is the leader of the opposition in the House of Commons. His views on the Indian problem are briefly set forth in the chapter on India in his new book *My England,* which he has been good enough to permit us to publish in the form of an article. His position makes it of first class importance.

"Back to the Land"—Mr. Lloyd George's Precept and Example

When Indian Leaders advise Indian young men to go "back to the land," they do not set them an example by themselves becoming cultivators. But when Mr. Lloyd George spoke on the national importance of agriculture he meant business. Recently he and 100 Surrey farmers had been comparing notes on potatoes at a demonstration plot on his farm. He was overjoyed when it was found that his plot had come out best in the demonstration.

He is more proud of his orchards than of anything else he has ever done.

His eyes were bright as a child's when he plunged in among his heavily laden apple trees, to point out those that won him the first prize at the Crystal Palace, and others that had yielded fruit of unsuspected flavour and rich colouring. He went unerringly, obviously knowing them by heart, to other trees in the orchards that had so far been disappointments.

"Remember those Worcesters you saw here last time ?" he said : "No good at all. I was thinking of giving them up. Well, this year they have done wonderfully. Won the first prize."

The farm at Churt is not the mere plaything of an elder statesman. It is a definite contribution to agriculture. For it was derelict when he took it, abandoned on account of its low grade soil—third or fourth class. Mr. Lloyd George is showing that it can yield abundantly when properly used.

Mr. Lloyd George is cultivating about 240 out of 500 acres. Before his time the farm employed three men. To-day it employs thirty-one, earning from 45s. to 50s. per week.

"I am happy," he said, "happier than I have ever been in my life. Politics were fun. I enjoyed all that ; but they weren't somehow as satisfying as this is.

"I am addressing you not as an ex-Prime Minister, but as a registered potato-grower. I have ceased to be a politician. I have now become a cultivator of the soil ; so that what I say is without reference to politics, and merely my observations as a cultivator of land.

"I am opposed to the policy of restricting production merely to raise prices. It suits me personally, but in the long run it won't do any good."

THE MODERN REVIEW

DECEMBER 1934

VOL. LVI., No. 6 WHOLE No. 336

CO-EDUCATION IN AMERICA

BY DR. SUDHINDRA BOSE

UNTIL recently co-education has been regarded as a peculiarly American system of education. Without a doubt co-education was first tried out in modern times on a large scale in the United States, and has reached its highest and fullest development here. American experience includes all kinds of co-education, primary, secondary and university, given to tens of thousands of boys and girls, men and women

A basket-ball team for girls

for at least half a century. During this period co-educational schools and colleges have greatly multiplied, while separated schools and colleges have proportionally sickened and died to the betterment of the whole educational system.

At present co-education is practically universal in the elementary grades of the public schools of the United States. It also prevails to a very large extent in the elementary grades of private and sectarian schools, including those which are under control of the usually conservative Roman Catholic church. Only in a few large cities like New York and Boston is any attempt made to separate the sexes in the lower grades of instruction. Even there the separation is made on grounds of convenience in administration, rather than because it is felt that separate education is the ideal method. It has been estimated that over 96 per cent of the elementary pupils are in mixed schools.

Not only is the free public elementary school in the United States a mixed school, but so is practically the secondary school. In no part of the country, except in some portions of the conservative Atlantic seaboard, is any distinction made in secondary education between girls and boys. Today only about twelve per cent of all girls and boys in the United States are studying in separated high schools.

Not long ago I went to see a friend of mine who is a city Superintendent of schools where several thousand boys and girls, from elementary up through the high school classes, are taught together.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"How do you like co-education" I asked my friend.

"You might as well ask me how I like eating or why I should wear shoes on both feet. Co-education is the most simple and natural educational method," came back the answer instantly. This city Superintendent has been dealing with the co-educational system for several decades. He ought to know what he was talking about.

Sir Michael E. Sadler of England states somewhere that the co-education of little boys and little girls is beneficial, but the co-education of the young folks beyond the age of thirteen is undesirable and imprudent. Pure Sadler! Virtuous Sadler! Speaking particularly of his native country, Monsieur Sadler affects to see great dangers in the co-education of what he calls elder boys and girls. I wonder why. He seems to "see things" invisible to others.

Another noted English pedagogue, more straight in his thinking, asserts that the much-lauded segregated public schools of England

A mixed class in German language and literature at a secondary school

are far from being temples of virtue. Indeed, they are "strongholds of immorality." He declares that the vice of immorality is caused by "the arbitrary separation of the sexes in schools." He says that the remedy is co-education which has been shown by American experience to abolish the temptation and with it the evils consequent thereon. He then quotes the following from the government report of the United States Commissioner of Educaiion: "To insure modesty I would advise the education of the sexes together. For two boys will preserve twelve girls or two girls twelve boys, pure amidst coarse jokes and suggestions, merely by that instinctive sense which is the source of natural modesty. But I will guarantee nothing in a school where girls are alone together, still less where boys are."

It is exceedingly rare to come across a man of sense who would maintain that co-education endangers the morals of American girls. Dr. Charles W. Eiliot, President of Harvard University, said it was his experience that the girls of America are entirely competent to take care of themselves. Indeed, no one in this country believes that boys and girls are dangerous to one another. They are good and wholesome, I fancy, chiefly because they are trusted to be so. And American youths, be it noted, are not a special creation. They are like the young normal people the world over.

Whoever has first-hand knowledge of American schools must admit that boys remain boys and girls can still be virtuous even though they happen to have shared a class-room while hearing how George Washington beat the English, or how Clive in India killed and looted and still bragged about his "moderation." Anybody who feels that co-education promotes looseness of thought and deed has made an imperfect study of the subject.

In the cultural field there is no separation between the sexes in this country. The only observable tendency toward segregation in American high schools is that which appears in the fact that boys go into one type of elective course and girls into another. In vocational studies especially when organized in special trade or vocational high schools, boys and girls naturally tend to elect different vocational work in order to be trained for the different occupations open to men and women. It is also true that in the larger high schools, boys and girls are frequently separated in athletics, gymnastics, and recreation; but the few attempts which have been made by some high schools to segregate the boys and girls in separate classes have failed.

Among the arguments which favour co-education in secondary schools, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

American *Cyclopedia of Education* mentions these: In all stages, it is more economical; it makes more for democracy and equality between the sexes; it promotes capacity and co-operative powers of men and women workers.

To my mind the greatest advantages of co-education is that it creates equality of opportunity. In the United States, 52 per cent of all persons of secondary school age are in high schools. No other nation, chiefly because of the lack of equal opportunities for the education of girls with that of boys, begins to approach this record. In other countries, less than 12 per cent of all persons of secondary school age are in high schools. That is a record which speaks for itself.

Coming now to the institutions of higher learning, I find an overwhelming trend toward co-education. From the founding of Oberlin College, which was the first institution of its class to introduce co-education (1837), the policy spread at such a rate that by 1880 more than half the colleges, and by 1900 nearly three-fifths, had adopted it. In the more conservative eastern States along the Atlantic coast, segregation was the general practice until the last quarter of the nineteenth century. But they, too, soon learned to discard one-sex education. Today even on the eastern coast, all the great university foundations—except Princeton—admit women to post-graduate instruction.

In 1915 women formed about 35 per cent of all graduate and under-graduate students in the United States; but, if the students of Roman Catholic, military and technical colleges be omitted, women studying in under-graduate co-educational colleges of liberal arts formed 42 per cent of the total number of men and women in co-educational colleges. In many co-educational colleges women now equal and sometimes exceed men, and their numbers are steadily increasing.

With the progress of equal suffrage movement, educational leaders persistently demanded on the right of women to have equal advantages with men in the line of education. Moreover, the expense and impracticability of duplicating higher education required the admission of women to men's colleges and universities. These reasons of equality and economy greatly helped the spread of joint education in the United States. In 1928 some 293,000 under-graduate and 17,000 post-graduate women students—altogether 310,000 women—were studying in American universities. The United States, unhampered by restrictions of single-sex education, is the only country in the world where thousands and thousands of women are receiving university education.

At present of the thirty-nine States Universities, all except those of Virginia, Georgia and Florida are co-educational. I myself have been teaching at a co-educational State University for over twenty years. I find nothing to giggle at the co-educational system, as do some of the deep pedagogues of Indian and English universities. All my American colleagues will agree with me that the presence of the two sexes in one class-room creates no difficulties whatever as regards the teaching, while it tends distinctly to good order. The young people of my classes discover that comradeship is possible between members of two sexes on a healthy and unsentimental basis. They also learn through various university activities the value and the art of co-operation. Each sex needs the other.

Operetta put up by a high school Glee Club of boys and girls

"The eye cannot say to the hand, I have no need of thee." College is not a teaching-shop. It is a training-ground for citizenship. It is a preparation for active life in which co-operation is of utmost importance. A plan of education which fails to prepare the youths of a nation to engage in social co-operation safely and sanely will to that extent fall short of its duty.

To Victorian moralists, co-education was immoral, a deadly sin. But thank Heaven! we no longer live in a decadent Victorian era. Sexual development is a natural process and the more calmly it is accepted by the individuals concerned, by just so much are health and morality promoted. In fact I am not familiar with any problem which is best solved by running away from it. What I actually find in America is that the community of work and the opportunity for free and natural intercourse between men and women effectively kill foolish notions on either side. In sober fact there is no emotional strain, there are no emotional disturbances. At least I am not aware of any. The two-sexed atmosphere inside a college is prophylactic against unbecoming conduct. Dr. George A. Dorsey of Chicago, in his remarkable book, *Why We Behave Like Human Beings*, concludes an interesting discussion of the subject with this significant statement: "Co-education is sanitary education."

The function of the university, in Emerson's words, is to "bring every ray of genius to its hospitable halls, by their combined influence to set the heart of the youth in flame." For these reasons, according to the testimony of practically all American university Professors, it is better for men students that they be taught in company with women students. Co-education is a benefit to both sexes. Said Dr. David Starr Jordon, Chancellor of the Lelland Stanford University:

> In women's education, as planned for women alone, the tendency is toward the study of beauty and order. Literature and language take precedence over science. Expression is valued more highly than action. In carrying to an extreme, the necessary relation of thought to action is obscured. The scholarship developed is not effective, because it is not related to success. The educated woman is likely to master technique, rather than art; method, rather than substance. She may know a good deal, but she is not effective in action. Often her views of life must undergo painful changes before she can find her place in the world.
>
> In schools for men alone, the reverse condition obtains. The sense of reality obscures the elements of beauty and fitness. It is of great advantage to both men and women to meet on a plane of equality in education. Women are brought into contact with men who can do things—men in whom the sense of reality is strong, and who have definite views of life. This influence affects them for good. It turns away from sentimentalism. It gives tone to their religious thoughts and impulses. Above all, it tends to encourage action as governed by ideals, as opposed to that resting on caprice. It gives them better standards of what is possible and impossible when the responsibility for action is thrown upon them.
>
> In like manner, the association with wise, sane, and healthy women has its value for young men. It raises their ideal of womanhood, and the highest manhood must be associated with the possession of an ideal.

"As You Like It" by the Dramatic Club of a co-educational high school

The arguments of the anti-co-educationists have been met and answered by experience. I seldom hear in this country now the old pitiful arguments that the women have not enough brains for study, or that they lose femininity, or that they are bad house-keepers and incompetent mothers if they have too much intellectual training. All these objections, never taken seriously, have melted away. The social prejudices have disappeared, and anyone who should argue today against co-education would appear a relic of by-gone times—ready to be a museum piece. If the Indian leaders turn themselves to an attitude of facing backward of resisting every move toward a liberal educational policy, they may as well retire for as long a sleep as Rip Van Winkle had.

India, of all the civilized countries of the world, is lagging behind in education. Only 1 per cent of the girls in India are literate, and only 1.03 per cent are under instruction. Less than two thousand women are studying in girls' colleges, and only a few hundred in men's colleges and technical schools. At the rate women's education is progressing in India, it will take hundreds of years to educate them. One way to speed up the process is to follow the American example and do it quickly.

American public opinion, based on many years of actual experience and not on theory, has definitely settled the question of co-education, that is, the right of women to share equally with men the instruction given not only in schools, colleges and universities supported by the government, but also in most of the educational institutions maintained by private efforts. None of the dire predictions of the anti-co-educationists have been fulfilled. A few minor disappointments here and there, yes; but no crop of disaster.

A foreign visitor to an American co-educational university asked one of its students: "What do you think of the problem of co-education?"

"What do you mean?"

"I mean education of girls in colleges for men."

"Oh! Co-education is not a problem in America."

THE ECONOMICS OF WAGES

By Major D. GRAHAM POLE

IN this article I will endeavour to deal with an economic problem which more than any other is constantly before the mind of the worker—the problem of wages. It is almost tragic to watch the conflicts that go on between employers and their employees over the question of wages and the hours of employments: tragic in this sense, that neither party seems to have the vaguest idea of what are the economic laws which really govern wages.

It would be a great accomplishment for the average Labour man and woman if they applied their minds to the economics of wages and as a result came to a clear understanding of the economics involved in the whole problem. To the average man in the street it seems an obvious truth that the wages he receives are paid out of capital owned by his employer. Employers on the other hand, who are usually just as stupid on economic matters as the most illiterate of their employees, love to exploit the fallacy that the capital they possess is the source from which the wages of their workers are drawn.

It is the acceptance of this fallacious idea by the employees on the one hand and the employers on the other that gives rise to wage agreements on what is called the give-and-take basis. Not infrequently Trades Union leaders are caught in the trap by the give-and-take basis in this way: The employer frankly displays his books, exposes his profit and loss account, the total of his over-head charges, the operation of his market—where it is contracting or where it is probably expanding—the total of his wages bill, and the average of his profits, interest or dividend payments, etc. etc. This seeming fairness on the part of the employer too often beguiles the Trades Union leader, who in face of what may seem to be apparently menacing facts is forced to compromise on wage demands and indeed compelled to ask the employees, on grounds of expediency, to accept less wages than they had expected to receive. This is almost the daily experience over wage negotiations.

At Geneva the same pantomime is performed. No discussion arouses greater interest at the International Labour Office than that which takes place on Wages. At the Geneva Conferences there are foregathered from every country leaders of the employing classes and delegates sent forward from Trades Unions. To read their discussions is one of the most dismaying experiences for the student of economics. For in Geneva as at home the discussion is based upon an utterly fallacious conception of the economics of the whole question. It is little wonder that year after year these Geneva Labour Office discussions end in pure futility.

From what has been said I hope I have made it clear that it is of prime importance that the average working man should try to understand what are the real causes of low wages and all that that involves.

The Wage Fund Theory

There was a theory held by some of the ablest and most disinterested writers on economics and political economy in the eighteenth and nineteenth centuries. It was called the Wage Fund Theory. Briefly this theory was that wages were paid out of a fund or pool and that if the number of workers increased beyond a given point, or if the number of employees remained the same but their wages rose beyond a certain point, disaster to industry was imminent—because the amount of money in the wages pool was being dried up and sooner or later there would be nothing left to pay anybody and economic disaster would follow. For example, two of the most disinterested champions of liberty of the nineteenth century really accepted this as a basic economic truth and embodied it in their writings as an economic fact to be reckoned with.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thomas Henry Buckley, than whom there was no more fearless champion of advanced thought and toleration, accepted this theory and indeed you can find it running right through the whole of his magnificent and masterly work *The History of Civilisation in England.* It will always be an enigma to the political and literary student that such a clear and incisive thinker as Thomas Henry Buckley should ever have accepted the fallacy of the Wage Fund Theory. John Stuart Mill also accepted this theory in his *Political Economy.*

Now the Wage Fund Theory, as baldly stated above, may induce many people to smile and dismiss it as the sheerest nonsense. But in the House of Commons one can hear Members of Parliament treating the Wage Fund Theory with derision at one moment and in the next proceeding to advance arguments for or against an increase of wages by arguments which can only be deduced from an acceptance of the Wage Fund fallacy. I have no doubt that Mr. Baldwin and those who with him advocate tariffs against foreign importations would tell you that they do not accept the Wage Fund Theory. But their arguments in favour of putting tariffs on foreign importations are based upon the belief that if cheap goods come into this country, this will force down the prices of commodities produced within this country—and that a fall in prices within the country will leave the employers with less money to pay wages to the workers out of the "pool."

How often are we told that really we cannot compete in the field of production with the low-paid wages of the producing countries abroad. And further tariff advocates openly say to the British workers: You must either give us tariffs to keep up prices—the implication being that high prices will mean high wages to the worker—or accept lower wages so that we can produce goods as cheaply as the foreigner.

Now the undeniable fact here is that they are making the following deduction: that wages are paid out of capital and that if the wages paid out of capital are high in Great Britain as compared with the wages paid in foreign countries, it means that the poor capitalists here, being compelled to pay these high wages out of their capital, will be utterly defeated in the world of international commerce. To paraphrase their argument it would run thus: "If you, the workers, demand high wages, it can only be at the expense of capital (their capital). And as wages are paid out of our capital, and therefore enter into the cost of production, it means that the price of our commodities will be undercut in the international market by similar commodities produced by those countries that pay less wages. We, the good employers, advance to you, the workers, your wages out of our capital resources (the Wage Fund) and if you make too great a demand for increased wages it will mean we shall have to close down home production to the advantage of foreign importers."

The force of this kind of argument, backed by his business facts and figures, has caused many employees to accept smaller advances than they had demanded or indeed cuts in their wages—and the implied necessity for protection for home production in the above argument has in no small measure caused workers at election times to vote for tariffs.

How Wages are Created

Now let us state the economics of the wages question. We must first of all give a clear definition of what we mean by the term wages. In a primitive form of society the wages of the individual would be all that he secured by his labour exerted upon land in some shape or form and this in the economic sense would include exertion of labour upon the sea. He would enjoy, as one economist puts it, nature's full minimum wage.

In more complicated forms of society the return to labour, or wages, will be that amount of wealth which the worker retains after paying rent for the use of land, and rates and taxes. Wages are the return to labour.

There is no record of any worker receiving wages in advance. A worker has to advance a week's labour, or in some cases a month's labour and perhaps more, before he receives any payment in the form of wages. And, let it be remembered, under our economic dispensation not merely does he advance a given number of days' labour before he receives any wages, but the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

employer, if he is an efficient employer in the modern sense, hopes to gain a profit out of the labourer's advance over and above the so-called wage which he pays the worker. So that in truth the capitalist advances nothing. The worker advances labour and receives at the end of a week or a month a wage less than the value of the service he has already rendered to the employer.

Now this is the experience of every worker in this country, yet despite that fact many workers believe that it is the good employer that advances everything to them. It is sometimes asked; do not the employers really pay wages out of their capital during that period in which the workers are employed in erecting, say, a large ship or a large building or working through some other process of production which involves a considerable period between the initial stage of construction until its final completion? When a company undertakes some enterprise which involves a prolonged period of construction before completion, does this company not really pay the wages of the workers during this period of construction out of the capital of the company?

The answer is simple. The workers who build ships, buildings, or are employed upon some other form of production which involves a long period of time before completion, are as truly advancing something to their employers daily as if indeed at the end of each day they were completing entirely the task upon which they were engaged. Let us take the case of workers engaged upon the construction of a great ship. A company raises money for the project, that is to say, they instruct bankers that individuals have guaranteed certain amounts. This book entry is nothing more than a security in the hands of the banks. The company then proceed with their constructional work. After the first week a certain amount of labour has been expended on the ship. Wages are then paid. The banks advance to the company sufficient to cover the wages bill. But the bank advances this money on two grounds. First upon the security of the investments in the company, and secondly on a knowledge that the workers employed have advanced the construction of the ship by one week.

If the workers had done nothing at all during this week and the wages had been paid, then in truth wages would be coming out of capital. But as a matter of fact, if an analysis were made of the position after the first week's work, it would be found that the workers had not robbed the company of any of its substance but by the labour they had exerted on the construction of the ship they had given more in the value of ship than they had received in wages. And so the process continues until the completion of the task.

If we could set aside money considerations, and look upon this process of production as a mere matter of winning daily bread, it will be observed at once that at the end of every week or fortnight the workers have advanced so much ship in return for so much bread, butter, tea, sugar, house-room and so on, and in fact have advanced in terms of ship more than they received in terms of the necessaries of life.

The payment of wages, so far as the employer is concerned, is but the return to the labourer of a portion of their capital which he received from labour. So far as the employee is concerned, what he receives from the capitalist in the form of wages is but the receipt of a portion of the capital his labour has previously produced. As the value paid in wages is thus exchanged for a value brought into being by labour, how can it be said that wages are drawn from capital or advanced by capital? In the exchange of labour for wages the employer always gets the capital created by labour. So although he pays out capital in wages, at what point is his capital lessened even temporarily?

In a rational state of society the value of physical and mental labour would rise, while the cost of individual commodities would fall. Indeed this is the whole underlying principle embodied in the statement that "man seeks to gratify his desires with the least possible amount of exertion." He will invent tools and other devices to help him to conquer the forces of nature and make them more easily the subject of his will. This clearly postulates that with the development of science and the arts more production of the things wanted to gratify his human desires should never cost him a moment's worry. But this part of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

argument would lead us into the problem of wealth distribution. At the moment we are concerned with the economics of wages.

But it is because of the stagnation in the field of wealth distribution that we have in an aggravated form this blind struggle over the question of wages. The worker is not a charge upon the cost of production and in any industry where efficiency is observed high wages paid to the worker would not be to the detriment of the industry but the very opposite. The higher the wage paid to the worker, the greater would be his enthusiasm for the task he would undertake, and the more efficieney would be expected of him. This would mean, taking the national view, that if wages were increased, high efficiency amongst the workers would follow—and surely it is self-evident that the nation which possesses the most highly efficient and contented craftsmen is the nation which is bound to defeat the competition of any country where wages are low and in which the workers are therefore inefficient and miserable.

To bring the illustration more vividly to the eye, let me put it this way. Let us assume that a local football club is being urged to lift some cup. What would be the attitude of the directors of the team towards the players? Would they go to them and say: in order to win this cup we will break your wages and lengthen the hours of your training? Or would they, as in fact they do, take the eleven men to a hydropathic, give them the best of treatment, look after their animal wants, and, as it drew near the time of playing the final, intimate to them that there would be a bonus for each goal they scored.

In this way football cups are won. But in the field of industry, because of the fallacious ideas regarding the economics of wages, and perhaps consideration of vested interests, the employing classes intimate to the workers that they are subject to world competition and that in order to beat this world competition it is necessary for the workers to take reduced wages, which means reduction of food and creature comforts, and work longer hours. This is how they hope to win the prize of world industry.

The labourer has ever been worthy of his hire and it behoves the labourer to know what is the worth of his hire and to know that as a labourer he advances everything and those who live upon his toil advance nothing. Wages therefore are not paid out of some "pool" or out of some fund which come into being as a result of the frugality of some beneficent capitalists. We have shown above, I hope quite satisfactorily, that wages are a part and in too many cases but a very small part of the value of the labour advanced by the worker to the capitalist.

Later I hope to deal with the distribution of wealth.

THE NEED OF SCIENTIFIC AGRICULTURE

By H. D. SEN, D. Sc.,
Harcourt Butler Technological Institute, Cawnpore

THE founding of a larger number of well-equipped pharmacological, microchemical and bio-chemical laboratories in India for the accurate assay of drugs, food and agricultural products is necessary. The importance of mass production and mechanization in agriculture in India with adequate transport and marketing facilities cannot be exaggerated.

During the last few years of the world economic depression the chemists had been busy in evolving ways and means of harnessing chemistry for the service of mankind and for solving the question of unemployment. While India was engrossed in politics, philosophy and poetry, Europe and America were being equipped with elaborate research laboratories fitted with delicate testing instruments. These laboratories were as a rule not financed by the State but by the people.

Pure chemistry had naturally been replaced to a great extent by applied chemistry. Of the many branches of applied chemistry which had come to the forefront were pharmaceutical, micro and bio-chemistry.

Pharmaceutical works in India were poorly equipped with delicate apparatus for accurate pharmocological tests. India was the home of important drugs whose medical properties were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rather indefinitely known. Mere chemical assay was not admitted to be adequate. Even tinctures of known drugs such as Tr. Digitalis, Tr. Stropanthus and Tr. Squill prepared in Indian Pharmaceutical Works would not be able to stand competition with foreign brands unless they were adequately corroborated by pharmacological tests.

A new phytochemical method was worked out by the writer at the Imperial College of Science and Technology, London, which might eventually replace the pharmacological test. This method depended on the fact that tinctures of drugs were poisonous equally to animal and plant life. The growth of rootlets was definitely retarded in solutions of tinctures of known strength as compared to their growth in nutrient media.

If the rate of retardation in growth was worked out to a unit length, the retardation took place with mathematical precision leading to an accurate assay of the strength of the drug.

During his investigation on Digitalis leaves grown under different manurial conditions the predominance of certain metallic radicles was found to affect in a remarkable way the toxic and tonic properties of the drug. The Synchronism in plant and animal life of such metals as Calcium and Manganese was found to be remarkable. The toxicity of the leaves increased with the intake of Calcium and decreased with the intake of Manganese.

Another branch of applied chemistry whose importance was being realized every day was microchemistry. In this connection the writer visited the laboratories of Prof. Pregal in the city of Graz, about 100 miles from Vienna. The microchemical laboratory could be said to be the chemist's "dollhouse" where chemical analyses were carried out with remarkable precision on substances weighing a few milligrams in cleverly designed tiny apparatus.

The importance of bio-chemical researches would be realized every day in connection with the utilization of molasses, the by-product of sugar manufacture, in which the writer was engaged.

The sugar manufacturer was keen on getting rid of molasses either by throwing it into a river or on adjoining fields, but to a chemist it was a mine of gold.

The disaster which had overtaken the Indian cultivator was due to various causes such as agricultural indebtedness, want of agricultural co-operative banks, agricultural associations or trusts, fragmentation of holdings and lack of Government sympathy.

However high India might raise her tariff walls the textile and sugar industry in India could not materially thrive unless Indian agriculture was organized scientifically.

India had trusted her cultivators, who depended on knowledge handed down to them for generations, and not on fundamental principles of scientific agriculture. The "mechanical" cultivators show a lack of "directive force." The utility of scientific agriculture in India had been materially observed in regard to tea, jute, and coffee cultivation, which had increased immensely the wealth of India. Every year about 7,000,000 pounds of tea to the value of Rs. 43,00,000, jute valued at Rs. 24,00,000 and coffee worth Rs. 2,00,000 were exported from India; but there are many other agricultural products, such as, fruits, flowers, spices, rice and wheat the export of which was coming down every year due to India not adopting scientific agriculture. Wheat was mainly exported to European markets from Australia and Canada, rice from Japan and fruits from Kabul.

The idea of mass production in agriculture might be said to be unknown in India. European and American farmers had thrived wonderfully mainly because of the adoption of the principles of mass production.

The experiments on Papaya cultivation and the extraction of papain had been quite successful at the H. B. Technological Institute, Cawnpore. By scientific cultivation and the selection of suitable varieties every tree yielded about 1/5 pound of papain per year. An acre containing 500 trees would yield 100 pounds of papain whose price would fetch Rs. 800. A 20 acre papaya plantation conveniently situated near a city to dispose of the incised fruits with adequate water facilities would have a net income of Rs 12,000 per annum. A twenty acre tomato plantation would have a net income of Rs. 8,860.

Sugarcane cultivation had come into the limelight and every Indian agriculturist was keen about it. A few new cane varieties evolved from Coimbatore yielded from 1,200 to 1,400 maunds per acre. Taking the price of cane to be 5½ annas per maund a sugarcane plantation covering 1,000 acres would yield 1,200,000 maunds of cane worth Rs. 4,00,000. Usually in the area in which sugarcane was grown wheat took its place the following year; hence for the adequate supply of a 600 ton factory 3,320 acres or, 4,000 acres of land would be required for cane cultivation.

It was evident that cultivation covering such huge areas would not be possible with implements as were being used, as for example the *desi* plough and bullock power. It could only be done with the help of machines, such as, the steam tractor and other mechanical appliances as were used in foreign countries.

It might be said that mechanizantion would increase unemployment but actually the contrary would be the case. By means of machine India would be able to produce more and to handle the huge production more men would be required. These having specialized in a particular branch of work would be paid bigger salaries than at present. It would ensure cleaner and more efficient work.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A steam tractor could cultivate 3,000 acres of land per day to the depth of a foot with ease whereas an indigenous plough and pair of bullocks could scarcely plough two acres per day to a depth of hardly 6 inches. Similarly there were other mechanical contrivances—such as weeding, seed planting and harvesting machines.

One of the drawbacks which the Indian agriculturist suffered from was fragmentation of holdings. A large piece of land was not available for starting a fairly big plantation covering about 1,000 to 5,000 acres. There was, however, fallow land in the Indo-Gangetic area and in the marshes of Bengal, which might be available for starting farms.

If this were supported by Government's huge irrigation system and the recent hydro-electric scheme for the supply of cheap electric power, consolidated farms and attached small factories for direct use of the agricultural produce might be possible.

With the production of raw and finished products the question of transport to the big cities arose. Metalled roads from the farms or the molasses-asphalt road recently devised at the H. B. Technological Institute might solve the difficulty.

Remarkable marketing organizations existed in foreign countries. Manufacturers in modern days did not stop at producing finished material in factories but were also intent on the organization of their sales.

For the ready sale of Indian sugar it was necessary that several factories should unite to form an association and shops should be started in the name of the association in the big cities of India.

THE MARSAILLES OUTRAGE: ITS BACKGROUND AND AFTERMATH

By BIMAL BIHARI BASU

THE civilized world was shocked at the news of the dastardly outrage at Marsailles which resulted in the death of King Alexander of Yugo-Slavia and M. Barthou, the French Foreign Minister. The pistol shots were aimed at the King and the Foreign Minister was only an accidental victim, for he happened to sit beside the King in the coach as they were being driven through the streets of Marsailles. The French Government had decided to give a rousing reception to the King whose visit was in the nature of a political mission, *viz.*, to cement the tie between France and Yugo-Slavia. The assassin was a nationalist Croat named Kalemann. In order to understand the significance of the outrage, which was in pursuance of a definite political object, it is necessary to trace the sequence of events which culminated in the terrible catastrophe.

As a result of the post-War arrangement consequent on the Treaty of Versailles, the kingdom of Yugo-Slavia and the republic of Czechoslovakia were carved out of the once powerful Austro-Hungarian Empire. Yugo-Slavia is composed of three distinct nationalities, Serbs, Slovenes and Croatians, the last forming a substantial and powerful minority with a different language and a distinct culture. Ever since the formation of the kingdom of Yugo-Slavia, the Croats had been agitating for local autonomy. The Serbs, who form the majority, would hear nothing of it and tried to meet the nationalist Croatian agitation with repression and greater centralization which merely accentuated the discontent. Gradually the Croats were exasperated and despaired of a peaceful and constitutional solution of their problem. Their sentiment was outraged and their spirit was inflamed when their able and brilliant parliamentary leader, Stefano Raditch, was openly murdered in June 1928. Thenceforth, for parliamentary agitation they turned to secret society movement for achieving their object. Complicated Balkan political situation gave an international character to what was merely a local question. The Croats looked across the frontier and found in Italy a ready, if not open, champion of their cause.

Italy under Mussolini has been dreaming of the greatness of ancient Rome which found a practical expression in a desire for national

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

expansion along the Adriatic. Finding that French interests were strongly entrenched in the Balkans, she took up the cause of national minorities and stirred up troubles among them. Croatia was a ready ground for receiving Italian propaganda and received its special attention, for an autonomous Croatia would be under the direct influence of Italy. Italy had also been energetically supporting the cry for the revision of the treaty arrangements and thereby secured the close adherence of Hungary and Bulgaria to her. But this had an adverse effect on her relations with the Little Entente. Further, the Italian proposal for the establishment of a Danubian State which was to be inaugurated with the preliminary formation of the economic union of Austria and Hungary met with a stout opposition from the Little Entente comprising Yugo-Slavia, Czechoslovakia and Roumania.

France, on the other hand, by its consistent and stubborn opposition to any move for revision had strengthened its alliances with Little Entente. The purpose of the visit of the Yugo-Slavian King was in furtherance of this aim, *viz.*, to cement further the tie of the Little Entente with France.

It is interesting to note that the opening weeks of the year 1934 witnessed a move on the part of the Little Entente to come to a closer understanding among themselves. The first Conference of the representatives of the three allied States of Roumania, Yugo-Slavia and Czechoslovakia was held at Prague on the 9th January under the presidency of Mr. Benes, the Foreign Minister of Czechoslovakia. The move for this closer understanding was inspired by (1) the united aversion to a revision of the treaty; (2) opposition to the Italian proposal for a Donubian Kingdom; and (3) opposition to the Italian plan for the reformation of the League.

So far we have been examining the state of Balkan politics and the relation of the Little Entente *vis-a-vis* Italy and France. Let us now consider the personal character of King Alexander and its bearing on the Croatian question.

The Croatian discontent grew in volume since the accession of King Alexander. His attempts to keep the Croatian minority under the iron heels of the Serb majority had alienated the best minds as well as the mass of the Croatians. From 1929 till the day of his murder, he had been a virtual dictator. In 1929 he had taken his people by surprise by issuing a manifesto abolishing Parliament and repealing the Constitution. He was justified to some extent in taking this step. It has been said that democracy is not suited to the genius of the Slavs. The parliamentary form of Government foisted upon the Yugoslav people as an aftermath of the post-War wave of democracy, had proved to be an inglorious failure. The Parliament had degenerated into a 'circus, a political madhouse' due to cliques, conspiracies and political assassinations. The King was clever enough to fish in troubled waters. Having never been a believer in democracy, he took the utmost advantage of the situation and "surrounded by the junta, and backed by the army, he leaped into the saddle as dictator." However, pressure from the British and French Governments compelled him to restore some sort of parliamentary Government which he did in 1931. As a dictator, the King is credited with having brought efficiency to the Government machinery. His physical unimpressiveness accounted for his constant use of the military costume. Superstitious and hysterical, he lived in constant fear of his life. He had reason for this fear, for there had been more than one attempt on his life, the last of which proved fatal. Unlike Ex-King Alphonso of Spain, he was not cynical enough to declare such attempts as professional risks of kingship. But he knew how to grind his own axe and was a past master in political intrigues, which he had to be owing to the singularly complicated character of Balkan politics. The supreme contempt in which he held parliamentary Government can be gauged from the following narrative from the pen of an American journalist named Adamic. At the time of his interview with the King, he found His Majesty busy in issuing directions to his followers in the Parliament on the phone on the occasion of a sham debate on the budget. He was "ordering some of his puppets to orate (lamely and stupidly, of course) against the regime, and others to reply brilliantly for the regime."

Of late, it was believed that the King was making a bid for Croatian friendship. He had spent nearly a month with his Queen at Zagreb in the beginning of the year. He tried to make himself popular by freely contributing funds to the co-operative societies which were in a wretched plight and also for poor relief. It was widely believed that he was averse to some sort of local autonomy being given in response to the Croatian demand. But the attempt on his life in March of this year seemed to have stiffened his attitude.

The above sketch will enable us to appreciate the complex personal character of the King and his attitude towards the Croatian question. Let us now consider the foreign relations of Yugo-slavia with the neighbouring States outside the Little Entente, *viz.*, Bulgaria and Hungary.

Bulgaria has been smarting under a sense of wrong done to her by the Treaty of Versailles. Her attitude towards the Little Entente has been one of strict neutrality. She refuses to be a party to any international agreement which may perpetuate her dismemberment. But of late there has been some change in this attitude, and she has begun to take some interest in a rapprochement with the Little Entente with whom she has recently entered into a five years' non-agression pact. But what has a more important bearing on the subject is her subservience to Italy, to whom she looks for a revision of the treaty. This has caused uneasiness among the members of the Little Entente and King Alexander was perturbed at the recent turn of events in Bulgaria which has been seized by a dictatorship of a fascist type on May 19 of this year, its professed objects being, among others, a tightening of the alliance with Italy. But it is not Bulgaria whom Yugo-Slavia hates and fears; it is with Hungary that her relations are very much strained.

Hungary's insistence on treaty revision backed by Italy stood in the way of a better understanding between Yugo-Slavia and Hungary. The relation had been steadily worsening. In April of this year Hungary had petitioned the League against the anti-Hungarian activities of Yugo-Slavia along the 300 miles of their common frontier. The shooting of fifteen Hungarian citizens on the borders was cited as a case in point. The Yugoslav representative on the League is said to have retorted: "If we fired, it was because just across the frontier there is a veritable bandits' lair." The Yugo-Slavian press published startling disclosures about the existence of a Croatian terrorist camp within Hungary which the Budapest Government is alleged to have tolerated and even collaborated with. The recent investigation of the outrage has proved the existence of such a camp. The name of the assassin Kalemann was on the list of Croatian terrorists in Hungary supplied by Yugo-Slavia to the League. The statement of Hostice, corroborated by Benes and Malny, who were accomplices in the outrage, further confirmed this. It has been also established that the head of the Croatian revolutionary organization, Dr. Ralevitch, directed his terroristic operations against Yugo-Slavia from Hungary. The moral responsibility for the recent outrage may, therefore, be justifiably fastened on Hungary.

What will be the aftermath of this outrage? Its effect on world opinion has been one of unmitigated horror.

The outrage still further complicates the Balkan politics. The Italo-Yugoslav relations have distinctly deteriorated and the indignant Yugoslav feeling found expression in an anti-Italian mob riot at Bulzany. All hopes of better understanding with Italy have receded further. Though there can be little doubt as to Italy's indirect encouragement to the Croatian nationalist movement, her direct help to Croatian terroristic operations remains still to be proved.

The question of Yugo-Hungarian relations, the consideration of which was postponed on May 14 due to the efforts of M. Barthou, is sure to raise a storm in the forthcoming meeting of the League.

The effect of the King's murder on Nazi Germany is shrouded in mystery. King Alexander was favourable to the Hitler regime, which feeling was not equally shared by other members of the Little Entente. It is reported that the German bourse showed distinct nervousness in anticipation of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

King's death on the day of the outrage. The whole question assumes a complicated aspect when we remember the declaration of a socialist newspaper of Saarbruck : "The bullets were fired in Marsailles, but they were made in Germany." The paper is reported to have been suppressed since then.

Undoubtedly the Croatian autonomous movement will receive a set-back for the time being.

As a result of the outrage, relations between France and the Little Entente will be further strengthened. But its immediate effect on French internal politics has been a re-shuffling of Cabinet portfolios, due to allegations in the Press. It was openly insinuated by some papers that the head of Surete Nationale was in league with gangsters and did not take due precaution regarding royal safety ; and the question was asked as to why the King was allowed to land at Marsailles when it was a well-known fact that it was a rendezvous of foreign terrorists.

But these statements cannot be regarded as an undiluted truth. It is common knowledge that in France newspapers always make vile insinuations and violent accusations against their political opponents. Even if it is assumed that the landing of the King at Marsailles was an act of folly, it will appear from Hostice's statement that the terrorists had two other plans up their sleeves if the attempt at Marsailles miscarried. Attempts were to be made at Lyons and Paris. However, the French Cabinet had to be reconstructed owing to the resignation of M. Sarraut, Minister of Interior, and M. Cherron, Minister of Justice, both of whom took upon themselves the moral responsibility for the outrage. The head of the Surete Nationale was suspended and has since been dismissed for having failed to take due precautions. M. Barthou's portfolio goes to M. Laval.

It is interesting to note that as a result of this outrage, the fight between the pro-revisionists of the Treaty championed by Italy and the anti-revisionists led by France is going to be grim and prolonged. Any revision means war and as there is as yet no sign of any peaceful settlement of this complicated problem, it is idle to hope that these highly militaristic and nationalistic States will fail to appeal to arms for a decision.

With Germany and France on the warpath, with Mr. Baldwin's reference to the shifting of British frontiers from the white cliffs of Dover to the Rhine and Mussolini's talks about wars of today, only confirmed optimists can see a silver lining in the horizon overcast with dark war clouds or see a ray of hope in the glib talks about the imperative necessity of peace and Geneva pourparlers.

European politics is in the melting-pot and it is not unlikely that a stray shot fired in some remote and obscure corner of Europe may lead to another world conflagration. Nations all the world over are sitting on the edge of a volcano and we may expect an explosion at any moment. Indeed, the world today is a political, economic and cultural madhouse wherein a few insane people are toying with the destinies of nations. It remains to be seen how long this unnatural state of affairs is allowed to continue.

"NO MORE WAR" MOVEMENT

By WILFRED WELLOCK

WE meet in this Conference* in the knowledge that civilization is in peril as at no time in its history, and may at a very early date completely collapse in the conflagration of another world war. The whole world realizes this, and yet seems unable to control the forces which are hurling it to its doom.

The tragedy of this situation is heightened by the fact that it coincides with the age of abundance, in which science has brought forth the treasures of the earth in such measure as to make possible a life of reasonable comfort and ample leisure for the entire human race.

This situation ought to be a challenge to every thinking person, and certainly every pacifist, to discover its causes, and having found them to expose them and work for their removal. Inquiry leaves one in no doubt as to what those causes are, while the serious position they reveal calls for plain speaking.

The outstanding fact in the life of today is the colossal war that is raging to the ends of the earth for the possession and control of material wealth and the means of its production, and thus for financial and political power. That war takes upon itself a thousand forms. It manifests itself in struggles between rival industrial, commercial and financial groups both within and without national boundaries, for the possession of trade and markets; in conflicts between employers and employed, and between the possessors of wealth and the dispossessed, and, finally, between nations. The havoc it produces has given rise to a supreme struggle, world-wide in extent, between those who believe in the possibility of a reasonable life for all, and those who would perpetuate a social order which places economic and financial power in the hands of comparatively small groups of people who use it primarily in their own interest and to the detriment of the general well-being.

That complex conflict has brought Fascism in Italy, Nazism in Germany, dictatorship in Austria, Poland and a dozen other States in Middle Europe; revolution in Spain, communism in Russia, industrial upheaval and dictatorial power in U. S. A., chaos in S. America, a volcanic situation in France, and deepening social conflict in every other State throughout the world; revolt against territorial imperialism in India, etc., and against financial imperialism in the S. American States, etc., and imperialist rivalry between the Great Powers—Britain, U. S. A., Japan, France, Germany and Italy.

The paramountcy and fundamental character of that conflict is proved by the fact that everything bows before it—The League of Nations, World Disarmament Conferences and World Economic Conferences, and even the International Labour Office when vital issues are before it. The fact that after sitting for 2½ years the World Disarmament Conference has collapsed in the midst of the biggest armaments' race ever known is undeniable proof that forces stronger than appear on the surface are guiding the destinies of the League of Nations. It is necessary to get a clearer picture and understanding of those forces.

Too long the Peace Movement has watched the march of world events with complacence. It has signally failed to give to economic factors the consideration they deserve. While the Peace Movement pleads with the League of Nations for disarmament, the latter is being controlled by hidden economic forces which make disarmament impossible. In 1906, we saw Europe stampeded into a notorious armaments' race. Politicians, poets, the "intellectuals" and even the Church succumbed to the panic. The British public, worked up into a frenzy, were induced to shout: "We want eight and we won't wait." The politicians bowed to the clamour, with little protest from public leaders. Thus the country got its eight cruisers, and eight years later, the World War.

The same influences are at work today. The same panic is being created. Another but far more dangerous armaments' race is under way—more dangerous because the death-dealing power of armaments has increased many-fold since 1918. Thus speeds the world to its doom, unless the entire course of events be changed.

But who will change them, and how?

The central fact about the modern world so far as the peace issue is concerned, is that, outside Russia, all the major economic and financial controls are in the hands of small groups of people—not in those of Governments, much less those of the people. Each of these groups exists to advance its own material interests. They are well represented, directly or indirectly in the legislatures and Goverments of almost every country, and Capitalist Governments rarely act contrary to their wishes. In some cases these groups are national in character, and represent particular trades, combines, or

* The "No More War Movement" Conference held at Leeds on October 13, 1934. Mr. Wilfred Wellock delivered this address as its chairman.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

associations. In other cases they are international, like the Armament Interests, for instance. Other groups are imperialist in character, as where the investors of one country try to capture the trade and control the financial and economic life of another country by launching loans and promoting public works, setting up and financing new industries, and getting their own nationals placed in all manner of important posts.

Hence we get a vast network of group interests, all of which are private and owe no responsibility to the peoples whose destiny they control, or to the League of Nations, and very little to Governments. That is why most Governments go to the League of Nations, Disarmament Conferences, etc., with their hands tied; why they resort to secret diplomacy, and incidentally why the public are dismayed when they get no results from such assemblies. These group interests are the real sources of power in all Capitalist States, although everything is done to hide that fact from the public. When Government policy is decided upon, no matter who inspires it, it at once becomes "national" policy, and is supported by the big engines of publicity in the name of patriotism. That is precisely how the recent development of "economic nationalism" has taken place. It explains why the National Government refused to support the abolition of all Air Forces, and the private manufacture of armaments, the shorter working week at the I. L. O. Conference, and why it is at sixes and sevens over the issue of the Indian Constitution, for the difficulty there does not arise over the question of justice or the ability of India to rule herself, but over that of British vested interests.

Now everyone of these financial interests thrives upon exploitation. Their combined success results in class and international domination and all the social degradation these involve—class war and racial antagonism, unemployment, poverty amidst plenty, starvation alongside food destruction and the throwing of land out of cultivation, etc.

Those responsible for a society thus organized naturally regard war as an unavoidable necessity which, however, regrettable, the public must tolerate. This situation gives rise to numerous interests which live by war and preparation for war. Thus about 90 per cent of the military castes seem unable to think of human relations except in terms of battleships and gun-powder. They support the demand for increased armaments every time. On the whole these castes are highly placed socially, have excellent political connections, and stand in good stead with the press of the Right.

Alongside the military castes are the armament makers, assisted to some extent by all the industries which benefit from the manufacture of arms. Those interests, unable to quell the lust for profits, especially during a trade depression, delude themselves into believing that an all-round increase in armaments will in some mysterious way lead to peace. They know, theoretically, what another war might mean, but accepting the principle that a bird in the hand is worth two in the bush, they make light of the dangers and take the risk, hoping for the best. The lengths to which these interests will go in order to get orders, has recently been revealed by the American Arms Inquiry, etc., and is a clear proof of my contention that Governments, the League of Nations and its appendages, such as the Disarmament Conference, are in the main controlled by powerful private interests.

Then, since most of the big daily newspapers are dependent upon advertisements for their existence, and thrive upon panics, the majority of them sooner or later play the game of the vested interests, with the result that the tide of public feeling tends to swing towards war. In such circumstances it requires politicians of giant stature to stem the tide; but unhappily there are no giants on the political horizon today.

Worse still, when the politicians collapse, the great majority of so-called intellectuals, Church and other social leaders collapse also. Even today, while the forces are gathering which may hurl civilization to its doom, there is an amazing lack of really big men who are combating those forces.

The above is a fair description of the effective controls in the life of today, and in the light of it I ask if it is reasonable to expect from them peace and the well-being of the people? You cannot gather figs from thistles. From its roots, which are greed and the scarcely checked right of human exploitation, to its culmination in a class-ridden society and an imperialistically-organized world, a revoltingly rich class on the one side and an equally revolting mass of degradation on the other side, with fear and growing antagonism convulsing the whole, our civilization hangs like a gas-filled globe, which at any moment may burst into countless fragments.

The time has come to speak plainly. The position is too serious to mince matters. So long as society is organized on a basis which inevitably produces the conditions of war, it is futile to pass resolutions demanding peace and disarmament. Nay, does not such a policy mislead people and cause them to continue in a belief which in fact assists the very evil it is desired to destroy? It is all very well to ask people to support the League of Nations, a "collective peace system," the "substitution of law for force," an International Polic Force, etc., but unless it is realized that in present conditions the League is a cockpit for the play of rival Imperialisms, it is highly dangerous to place too much trust in it. The part played by the Great Powers in the League's handling of the Jap-Manchurian affair is ample justification for my warning. To be frank, the "collective peace system" is largely a chimera in present conditions.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Nevertheless I believe that we ought to hold on the League and use every opportunity to extend its power and influence. It certainly makes possible a postponement of hostilities in critical situations. Its platform should be used to expose the forces which are at work behind the scenes against the interests of world peace, such as the imperialist ambitions of the Great Powers. But having said that I think we ought frankly to recognize the limitations of a League of Nations which rests on the power, camouflaged in a variety of ways, of thousands of private vested interests, while the well-being of the people never even comes into the rockoning.

It is to the credit of the No More War Movement that it was the first peace organization in this country to recognize and affirm that neither peace nor disarmament can accrue from a society which is founded on the right of human exploitation. Taking that stand has resulted in the loss of considerable financial support, though every international event justifies it to the hilt. Indeed, the call to make clear to the public the underlying causes of war is one which the Peace Movement will neglect at its peril.

In the conditions of today the No More War Movement is convinced that there is only one way in which the situation can be saved and peace be assured, and that is by a powerful nation taking its courage in its hands and disarming alone. The events of the last few years have proved conclusively that disarmament by agreement among a number of imperialist States is a delusion. What is today needed is an act of great courage which will lift men's minds above the fears, suspicions, rivalries and illegitimate ambitions which today are corrupting the streams of international life, to the purer atmosphere of a new hope and of a finer idealism. Humanity everywhere is looking for the dawn of the age of peace and social well-being, conscious that the means exist to produce it. They cannot understand what is delaying its coming. Whoever gives hope and guidance to this great and expectant multitude will win their support and save civilization. That multitude includes the teeming millions of workers in all lands, the great majority of worshippers in the churches of the world; indeed all the saner elements in society, including a very considerable body of people who, confronted with the tragedy of a collapsing civilization, are prepared to sacrifice all manner of allegiances if given a bold and enlightened lead.

But let us be quite clear upon this, that no Government will or can disarm unless it sets out deliberately to abolish exploitation and thus imperialism, and to establish the largest possible measure of social justice.

In what I am now about to say I speak not for the Movement of which I am Chairman, but for myself. Joining the No More War Movement does not involve any political affiliations, although I think we shall mostly agree that disarmament cannot be achieved without political action. I personally feel so strongly the need for courageous political action that I am driven to express my views with great frankness. Many of my friends, both of the Right and the Left, may disagree with me, but the times demand that we be outright, honest and frank. The world is in the throes of the profoundest transition it has yet been called upon to pass through, but unless it proceeds much more rapidly than it is doing at present, the catastrophic elements within it may bring about a collapse before the new order has even begun to emerge. Moreover, the new order will not come by observation. as a group of former idealists were once informed: it can only come by courageous action, since it must cut against all the interests which thrive on the existing and tottering order of things.

I am a member of the Labour Party. I joined that Party because I believed it stood for the abolition of human exploitation and social injustice, the cause of both class and international war. For that very reason I believed that the Labour Party was in a position to take a different line of action upon the disarmament issue from any other Party. I saw that by attacking and seeking to put an end to human exploitation, the way would be clear for a new disarmament policy, that of disarmament by example.

So far, however, the Labour Party has hesitated to adopt unilateral disarmament. Indeed by its recent decision to place the country's destiny in the hands of a League of Nations which is breaking under the strain of clashing Imperialisms, it has taken a retrograde step. But already that decision is giving rise to considerable uneasiness within the Party, and I am convinced that coming events will bring disillusion and a strong swing in the direction of disarmament by example. It should also be stated that there exists in the Labour Party a strong left-wing tendency to demand armaments for the purpose of the class war. This may prove to be as dangerous as imperialism itself, and must be combated. Nevertheless, for the reasons previously stated, it is through the Labour Party that I see the only possibility of securing disarmament and outlawing war. I therefore press for the assistance of all who are able to give it in order to win over the Labour Party to a policy which its principles make possible and indeed demand. A very considerable body of opinion within the Party already favours the proposal, while its adoption would command the backing of a large volume of religious and independent opinion which, in due course, would support not less zealously the other items of Labour Policy which unilateral disarmament inevitably entails.

The effect upon world opinion of applying a consistent peace policy, involving measures for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

abolishing social injustice at home and exploitation, or imperialism abroad, the turning to social uses of the vast sums now spent on wasteful armaments, and a policy of complete disarmament, would be indescribable. It would awaken the minds of countless millions, galvanize peace feeling throughout the world, and create a more vigorous demand not only for disarmament, but for the changes in social and international relations which disarmament involves. Incidentally it would so exalt the nation which had thus led the way to a new era as to make it the safest country in the world. Were Britain to give that lead, and in doing so give, say, freedom to India, I believe the effect upon world opinion would be electric, and would render India safe from the attack of other Powers.

It is not possible for me here to describe in detail the conditions which I believe the policy I have suggested would produce, and how these conditions would prevent those occasions—presumed attacks by unscrupulous Powers, etc.—which crop up in the minds of people who have always been accustomed to thinking in terms of military power. We are all too apt to overlook psychological factors; and without question the moral effect upon the world of a nation like Great Britain adopting the policy I have described would be such as to revolutionize international policy, completely change the outlook and hopes of humanity entire. Every forward party and movement throughout the world would receive encouragement and inspiration, while reaction would everywhere be held in check.

If my analysis is right, and I present it as an honest and sincere challange to your thought, then I claim that the chief tasks before our Movement are first, to make the public realize the close connection between the existing social order and war, second, to make a supreme effort to bring unilateral disarmament within the purview of practical politics, which must mean, if my interpretation of the situation is correct, bringing that policy within the immediate programme of the labour Party, and third, to help to prepare the machinery for preventing or stopping a war should our peace policy fail. And it may fail Hence we must co-operate with all the organizations, including Labour and cognate bodies, churches, etc., which see the imperative need for preventing this final act of madness from overtaking our civilization.

But it is on the positive programme that we must concentrate. The taking of one firm step in the path of unilateral disarmament would, I believe, do more to save the world from war than anything else, and, moreover, would place us on the road to social freedom, social justice and social peace which are the aims and hope of every people.

WOMEN'S INDUSTRIAL COMPENSATION

By SURENDRANATH BOSE

IN the present day there are many men and women who hold that child-bearing and child-rearing take up so much of women's time as to give them very little opportunity to engage in industrial pursuits. But it is a fact that in days past women had time enough for industrial pursuits in addition to and even as part of their household duties.

Formerly woman was a valuable member of the family. The wife created more value by industry in the home than her husband did out of it. In her hands cloth became clothes, flower bread, and fresh fruits the winter's preserves. Now all things are done outside the home and must be purchased. The wife no longer contributes to the family income by creating values, and with the increased standard of elaborate dressing, she is often its chief burden. (See Nearing: *Social Adjustment*; Chapter 6.)

This state of things has been brought about by the growth of machineries in the industrial world. The mills and factories have made it possible to produce and supply things at cheaper rates than women could ever do; and mills and factories are worked by men outside the family circle. Women's industrial pursuits have thus passed into the hands of men. Formerly social disapprobation checked men from competing with women in what were regarded as feminine pursuits. Now the factories have broken up all sex-divisions of labour, and deprived women of their proper means of earning money. Woman has now become a burden upon men and degraded in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

social position ; she has no way for making money except by begging from men or stealing from the daily household accounts or by other still more degraded ways. Her degradation means the degradation of her children and, therefore, of the human race. Women feel their degradation keenly and react in various ways to establish their equality with men. Some of them choose to live single rather than submit to the yoke of a husband ; some go to schools to qualify themselves like men for public posts ; some enter the factories and engage in gainful occupations. The revolt of women in such ways tends to break up the family and to create social disintegration and social degeneration. To remedy this state of things, modern society has undertaken to train up the girls in industrial lines with a view to enable them to engage in gainful occupations at home without neglecting their household duties.

The new plan, however, does not promise to be a success. The products of women's labour have such small sale in the market as to make their output unnecessary. This is so because men can produce those very things in a shorter time than women can ; and shorter time means cheaper price. For the price of a product of labour, apart from its profit, must include its outlays, among which are the expenses incurred by the labourer for living during the period of labour, the expenses increasing with the increase of the period of labour. In this way women are outdone by men in industrial competition.

Now the question arises as to why women take longer time than men do to finish a piece of industrial work. The answer is that it is so because women suffer from industrial disabilities from which men are free. The disabilities of women are chiefly the natural hindrances arising from their functions of motherhood and partly the social and industrial restrictions which become necessary for them on account of those functions. The disabilities of women cause interruptions in their labour, as a result of which the period of their labour increases and with that the price of the product of their labour increases also. Hence the point at issue is as to how the industrial disabilities of women can be remedied.

Human society observes the rule of giving a compensation to the disabled, no matter whether the disability owes its origin to nature or to man. Asylums for the aged, infirm or insane, hospitals for the sick or wounded, refuge homes for orphans or foundlings are, in a sense, different ways of giving compensation to the disabled ; for they are maintained with contributions given by those who are not disabled. In a similar sense, women, who labour under disabilities, should be given a compensation with some sacrifice on the part of men, who do not labour under those disabilities.

It may be argued that men have given a compensation to women in consideration of their disabilities by giving them maintenance and by making provisions for their children. This argument had its weight in times past when women could use their leisure hours profitably, as has been said above. In these modern times when women's proper vocations have been wrested from them by the factories and hotels, they have much idle time on their hands, and much accumulated energy seeking an adequate object for its employment. In the absence of profitable work, they become unhappy and neurotic, and naturally attempt to relieve their tension according to the promptings of their nature, which might make them run into follies in spite of all social restraints. (See Sir S. Radhakrishnan : *Kalki*). Clearly, then, mere giving a maintenance does not come up to the requirements of a compensation for women.

Compensation may be given to women on account of their industrial disabilities by giving them economic concessions with regard to certain industries ; for example, by granting them municipal aids, free tenures, conveyances exemptions, abatements, easements and other privileges in equitable measures. To take a concrete example, a tailoring factory started by women may be granted a fund for its construction and upkeep, a freehold site for its buildings, a remission of rents, taxes and duties, a passport or conveyance for its controllers and canvassers, and other similar privileges, Such concessions will enable women to reduce their expenditure and hence to reduce the prices of their industrial product and offer them for sale in competitive terms with men, notwithstanding their own

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

disabilities. In this way, *concessions will constitute women's industrial compensation* and will restore to them many of their lost industries, to the benefit of the individual, the family, the society, and the race.

The success of the compensatory system will depend upon women being better workers and better inventors than men; better workers because men may not give up their endeavours to compete with women; and better inventors because man-made machines may not be suitable for women. Furthermore, the co-operation of men will be necessary to give the women their due and to accord the benefits of the compensatory system to the female members of their respective families.

The industries most suitable to women in these days can be decided only after a study of the actual results of the woman's movement. Corporate bodies of the State might begin the movement by making a selection of those industries which, in their opinion, can be carried on by women in their respective provinces without prejudice to their health and household duties and such corporate bodies might grant equitable concessions to women by virtue of the powers conferred upon them by the State laws.

In making the selection of industries for women, regard should be had to the industries which were originally invented by the mothers for the welfare of the children, and which were long in their hands and were, in fact, perfected by them before passing from their hands into the mills, factories, hotels and schools. A list of some of them given below may be of some use and interest. To wit, spinning, weaving, cutting and stitching, needlework, ordering of wool, hemp, flax, making of cloth and dyeing, extraction of oils, perfumes, distillations, toilette requisites, banquetting stuffs, basketry, pottery, cookery, husking of corns, grinding of grains, the knowledge of dairies, preserves, conceited secrets, herbal doctoring, midwifery, child-nursing and educating. (See Briffault: *The Mothers*; Gervase Markham; *The English Housewife*).

AN ETHNIC STUDY OF THE PANDAVAS

By ABHAYANANDA MUKHERJEE, M. sc.

THE racial origin of the Pandavas has always been a controversial topic. In this attempt to throw some light on this vexed question we shall begin by examining the essential points freed from all embellishments.

It is clear that if some striking features which distinguish the Pandavas from the rest of the people described in the vast epic are discernible, our task will become simple. The point, that suggests itself in this connection, is the marriage of Draupadi to the five brothers. But doubts have been raised as regards its characterizing value and we shall examine this point in detail. It is indisputable that the epic was based upon an ancient story and that the marriage of Draupadi was too essential a part of it to be modified in later versions. We must now see how far this marriage can be said to characterize the Pandavas as a people distinct from the Kurus and other allied races.

Prof. Hopkins is inclined to regard the Pandavas as a body of strangers.

> "The Pandus, whatever may have been their antiquity, first come into view with the later Buddhist literature, which recognises the Pandavas as a mountain clan..... The Mahabharata offered various explanatory excuses for the polyandry of the Pandus who, however, as a northern hill-tribe or family probably were really polyandrous and needed no excuse." (Hopkins in *Camb. Hist.* Vol. I, also cp. *The Religions of India*. P. 388).

But Dr. Roy Chaudhuri is not prepared to accept this view. (*Journal of the Dept. of Letters*, Cal. Univ., Vol. IX, pp. 95-96.) In trying to prove that "the polyandrous marriage of the Pandavas does not necessarily indicate that they are interlopers," Dr. Roy Chaudhuri has cited the cases of the Brahmana girls Jatila and Várkshi (Mbh. I. 196), the case of Mamatá who was "the *de facto* wife of both Utathya and his brother Brihaspati" (Mbh. I. 104) and the case of a daughter of Yayáti who was "successively married to four persons, *viz.* Haryyasva, Divodasa,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Usinara and Visvamitra" (Mbh. V. 115-119.) We shall now examine these points.

In the Mahabharata (I. 196. 14-15) the cases of Jatila and Varkshi are cited by Yudhisthira in support of the decision of the five brothers to marry Draupadi jointly. There is no doubt that this marriage "was directly opposed to the Brahmanical views." When Drupada says (I. 197. 7) "The law teaches that one man has many wives; but one has never heard that one woman has many men as her husbands," he only gives expression to the general Indian opinion. It is clear from a perusal of this portion of the Mahabharata that the cases of Jatila and Varkshi, about whom only the barest remark is made, did not help Yudhisthira in the least. Several clumsily invented stories were related by Vyasa before Drupada's consent was obtained. It is also important that these stories were not related before everybody but were meant only for Drupada. (I. 196. 19. **नन्व वक्ष्यामि सर्व्वेषां पाञ्चाल ! शृणु मे स्वयम्**).

Clearly Vyasa was afraid of criticism. In the Mahabharata "there is not even an attempt made to bring the three justification stories of Vyasa into accord with one another or with the principal narrative. On the other hand it is repeatedly distinctly emphasized that it was an ancient family custom, not indeed a general Indian custom but a special family usage of the Pandavas". (Prof. Winternitz: *History of Indian Literature*, Vol. I. P 337.) Instead of trying to justify it "mythologically, allegorically and symbolically" we must accept it as an ethnological fact.

That this polyandrous marriage was judged with peculiar harshness even at that age can be gathered from Karna's retort when Bikarna protested against the barbarity of the Kaurava princes. (Mbh. II. 68. 34-36.) Karna said:

"If you think that we have acted wrongly in bringing her before the assembly when she is wearing only one piece of cloth, hear my excellent words on that point. The gods have ordained only one husband for a woman, O son of the Kurus, but as she has chosen many husbands she has been judged to be a harlot; therefore in my opinion there is nothing strange in her being brought before the assembly when she is wearing only one piece of cloth or even if she had worn no clothing at all."

That the polyandrous marriage served to lower Draupadi in later estimation can also be gauged from the fact that this "magnificent female character of the epic" appears in the Jataka "as an example of feminine depravity, as she is not content with her five husbands but also commits adultery with a hunchbacked servant" (Jataka No. 536).

The other two cases cited by Dr. Ray Chaudhuri must now be examined. In the Mahabharata Mamata is described as the wife of Utathya and Brihaspati is there clearly mentioned as the husband's younger brother. (Mbh. 1. 104 9-11.) Thus the expression "the *de facto* wife of both Utathya and his brother Brihaspati" is misleading inasmuch as it was a simple case of adultery. Mamata's case therefore lends no support to the marriage of Draupadi.

The case of Madhabi, the daughter of Yayati is rather peculiar. (Mbh. V. 115-119.) But even then her marriage "successively with four persons" affords no similarity to the case of Draupadi. Yayati gave Madhabi to Galaba because he was unable to pay for eight hundred horses of a peculiar breed and Haryyasva, Divodasa and Usinara gave Galaba six hundred horses of that breed for the estimable privilege of begetting sons upon beautiful Madhabi. When it was found impossible to procure the remaining two hundred horses, Galaba requested Visvamitra to accept the six hundred horses and to beget a son upon Madhabi. Surely this cannot be termed being "successively married to four persons." Madhabi was finally sent back to her father Yayati. (V. 119.) Madhabi was used purely as Sulka (price) for horses and cannot be said to have any connection with polyandry. In our opinion if Madhabi's case illustrates anything, it illustrates "patria potestas".

Dr. Ray Chaudhuri has also remarked that "the system of Niyoga prevalent among the Kurus was not far removed from fraternal polyandry Mbh. 1. 103. 9-10; 105. 37-38)." But we should remember that the recognition of Niyoga and of gudhotpanna and other illegitimate sons has been attributed to "the unusual importance attached to male descendants. Toleration of prostitution has not hindered the growth of a strict law of marriage" (Dr. Jolly: *Hindu Law and Customs*, p. 106.) Polyandry as such was unknown to the Kurus. No mythological element was necessary to support the procreation of sons on a childless widow by a relation, which we find in the birth-story of Dhritarastra and Pandu. We find also that when Pandu asked Kunti to resort to Niyoga for the fourth time after the birth of three sons, Kunti said that Niyoga for a number of times was opposed to dharma and refused. (Mbh. I. 123. 76-78.) Levirate was known to many ancient races, particularly to the Hebrews, among whom no polyandry can be traced.

Though it was accepted as an ancient custom, a tendency to disapprove of Niyoga is discernible in Brahmanical works from very early times.

> "Already Aupajandhani, an old teacher of the white Yajurveda (Baudh. 2, 3, 33ff) had expressed his disapproval of Niyoga. Manu (9. 64-70) condemns Niyoga, immediately after recommending it, as a beastly custom." (Dr. Jolly: *Hindu Law and Custom*, p. 155.)

Dr. Ray Chaudhuri's argument is, therefore, in our opinion not convincing.

Hence we must conclude that the polyandrous marriage was an element foreign to brahmanical tradition and "was a special family usage of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Pandavas." We shall next consider how far other evidences in support of the argument, that the Pandavas are not a body of strangers, can stand scrutiny.

According to Dr. Ray Chaudhuri the testimony of Buddhist literature points to the conclusion that the Pandavas are an offshoot of the Kuru race.

> "In the Dasa-Brahmana Jataka (Jataka No 495) a king of the stock of Yudhitthila reigning in the kingdom of Kuru and the city called Indapatta is distinctly called Korabya—belonging to the Kuru race." (*Political History of Ancient India*, p. 20.)

But the evidence of mere names is a very weak reed to lean upon. In Jataka No 413, Dhananjaya is a Kuru King residing in the city of Indapatta of the family Yudhitthila; but in Jataka No 515 Dhananjaya Korabya is a pious Kuru King called Yudhitthila in the Gathas, and in Jat. No 329 Dhananjaya is a King of Benares. In Jat. No 185, Pandava occurs as the name of a horse. "In the Jatakas there is no allusion at all to the story of the Mahabharata." We are therefore led to the conclusion that the references in the Jatakas bear testimony only to a slight acquaintance with the Mahabharata. As regards Brahmanical literature, "nowhere in the whole Veda is the name of Pandu or of his sons the Pandavas to be found, though in the works belonging to the Yajurveda there is a frequent mention of Kurus and Pancalas."

In the Mahabharata itself we find some confusion regarding names. In the Mahabharata (I. 94. 51-56) we find that Janamejaya is a son of famous Kuru, Pariksit is one of the grandsons of Kuru, Dhritarastra and Pandu are the sons of Janamejaya and Santanu is a great-grandson of Dhritarastra. This Santanu has also been made the grandfather of the later Dhritarastra and Pandu. We also see that the kings Janamejaya, Pariksit, Dhritarastra and Pandu, who are mentioned here, are far removed from the kings of the same name mentioned in the Pandu story. This proves that all conclusions based on bare names should be used with caution.

We see therefore that there are some reasons for supposing that the Pandavas were a body of strangers and that the arguments in favour of regarding them as belonging to the Kuru race are not conclusive. We shall next discuss the question and weigh the probabilities by examining the internal evidence.

We shall start with the birth of the Pandavas. The epic relates a very fantastic story, which according to Prof. Winternitz "could scarcely have belonged to the old poem," in order to explain the birth of the Pandavas who are supposed to have been begotten not by, but on behalf of, Pandu. There is one very important point regarding these births. We find that during the period of these births Pandu had been living with his wives on the Satasringa mountian beyond the Himalayas. (Mbh. I. 119.) In this Trans-Himalayan region were the Pandavas born. After the death of Pandu we find that they were brought down to Hastinapur together with Kunti by hermits who lived beyond the Himalayas. These hermits vanished miraculously after leaving them in charge of Bhisma. This story, in which the supernatural element is predominant, strongly suggests that the Pandavas belonged to a different race (probably of trans-Himalayan origin) and the author of the Mahabharata grafted this new race upon the Kurus.

In our opinion neither Kunti's exhortation to enjoy "the alms" together even when "the alms" was a woman nor Vyasa's clumsily invented stories explained the polyandry of the Pandavas. The real explanation is also found in the Mahabharata (I. 191. 11-16). It is clearly stated there that all the Pandavas were smitten with the charms of Draupadi (I. 191. 13) and Yudhisthira after reading the signs correctly and fearing internal dissension (I. 191. 16 decided that Draupadi should be the joint wife. This clearly proves that it was a special family usage of the Pandavas and not a general custom because nowhere else had this custom been resorted to for keeping fraternal solidarity intact.

We shall next try to find out some other factor which may be used to distinguish the Pandavas from the Kurus and other allied races. One such striking factor is to be found in the Mahabharata (VIII. 83). Bhima is found to literally quench his thirst for vengeance by drinking the blood of his opponent Kuru prince Duhsasana.

In the Mahabharata (II. 68) we also find Bhima taking an oath which has been considered to be the extenuating factor of this terrible form of vengeance. Exasperated by the barbarity of the Kaurava princes Bhima says:

> "Give heed to my oath, ye warriors of the whole world, an oath such as has never before been uttered by man, and such as will never again be uttered by a man. May I never attain to the resting place of my ancestors if I do not fulfil the words which I have spoken—if I do not tear open the breast of this evil, foolish outcast of the Bharatas in the fight, and drink his blood!!"

The justification offered by the author of the Mahabharata seems to be that when Bhima took such an oath, as a Kshatriya, he was bound to fulfil it But a question may be asked: Why should Bhima take such a strange oath? Clearly the idea, strange to others, was not absolutely strange to him. When Bhima took this oath before the assembly (Mbh. II 68), his hearers probably treated it as a hyperbole.

There is another fact which deserves consideration. Even though we accept the theory that Bhima took this foolish oath hastily and felt himself bound by the honour of a Kshatriya to fulfil it, we may naturally expect that he would taste a drop of the blood perhaps, only to fulfil the letter of the foolish oath and that he would never revel in it. But we actually

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

find him (Mbh. VIII. 83) drinking considerable quantities of blood again and again and pronouncing it to be better than "mother's milk, honey and wine." This terrible revenge was not at all repugnant to him. But the onlookers began to run away terror-stricken and they exclaimed, "This is not a man but a demon." (Mbh. VIII. 83.) This proves conclusively that the sight was revolting to the Kurus and others and that the idea was foreign to them. Bhima's attitude supports the conclusion that this drinking of blood must be treated as a distinguishing feature.

Two characteristics have emerged from this discussion—the polyandrous marriage and the drinking of blood. These may help us to establish the ethnic affinity of the Pandavas to some of the ancient races.

This drinking of blood of a fallen foe reminds us of an analogous custom prevailing among the Scythians. The customs of the Scythians in regard to war, as detailed by Herodotus, are, to say the least, horrible, but one characteristic must be noted. Herodotus says :

> "That which relates to war is thus ordered with them ; when a Scythian has slain his first man, he drinks some of his blood." (Herodotus : IV, 64)

This is significant.

Regarding the polyandrous marriage we have already seen that the only factor which guided Yudhisthira's decision was the fear of losing fraternal solidarity. (Mbh. I. 191. 11-16.) We have seen also that this method of attaining the object as well as the custom was strange to the Indians, but it was not so to the Scythians. When speaking of the customs of the tribes who dwelt near the Scythians, Herodotus says, "The Agathyrsians have promiscuous intercourse with their women, in order that they may be brethren to one another and being all nearly related may not feel envy or malice one against another." (Herodotus : IV, 104.) From this it is seen that the idea of group-marriage was not novel to the Scythians and that the object was identical with that of the Pandavas, since here also the attempt to preserve the solidarity of the community had been the basis of the custom.

Regarding the high honour in which Draupadi was held by the Pandava brothers, we must say that it does not come in conflict with our theory. The attribute of justice was a commonplace in relation to Scythians so that Herodotus speaking of the Issedones (IV, 26) can say, "For the rest, these also are said to be just ; and the women enjoy rights equally with the men."

These characteristics of the Pandavas which are remarkably analogous to some traits of the Scythians and allied races lead us to the idea that the Pandavas might have been connected with the Scythians. The fantastic story of their birth in a Trans-Himalayan region lends stronger support to the theory. We must consider next how far the geographical position of the land of the Scythians supports this conclusion.

As regards the geographical position we may note the following points from an admirable article by Dr. Thomas called "Sakastana" (J.R.A.S. 1906, pp. 181-216). Says Dr. Thomas :

> "What objection can we urge against the supposition that in ancient times the whole population of the mountainous country from the Eakai of the Greek naratives to Sakastana was in fact Scythian. No one any longer doubts that the Scythians of Europe and Asia were merely the outer, uncivilized belt of the Iranian family and though the observations of Hippocrates may point to an ethnological difference, the close relation of the Scythian dialects to the Zend and Persian is beyond dispute."

The position is further simplified by the following remarks of Dr. Thomas :

> "An early presence of Sakas in Sakastan is explicitly included among the Indo-Iranic speculations of Brunnhofer and would no doubt harmonize with the theories of Hillebrandt concerning a knowledge of Arachosia and Drangiana by Indians of the Vedic age."

We know that "in the time of Darius, son of Hystaspes (500 B. C.) the Sakai with the Caspii formed the fifteenth satrapy ; and in the army of Xerxes, they were associated with the Bactrians under the command of Hystaspes, the son of Darius and Atossa (Herod. iii. 93 ; vii. 64)." (Smith—*Early History of India* P. 264.) Strabo clearly states that the sakai and allied tribes came from the neighbourhood of the Jaxartes. Mr. V. A. Smith (Z. D. M. G. 1907) agrees with the conclusion of Dr. F. W. Thomas (J. R. A. S. 1906) that "the Sakas had been settled in Sistan from very early times." This proves that the geographical position of Sakastana does not preclude the possibility of the Scythian origin of the Pandavas. The Pandavas came from a region outside India ; even though the region cannot be proved to be Sistan itself we may say that it was at least close to Sistan and imbued with Scythian influence.

We have studied the question in its different phases and we must admit that the materials at our command have been scanty. But in the absence of other evidence we may suggest that the Pandavas were a new family or clan related to the Scythians who built up a kingdom and then obtained supreme power by allying themselves with the Panchalas and attacking the Kurus.

DWARKANAUTH TAGORE

[Few know that there was in Calcutta in the forties of the last century a daily paper named *The Calcutta Star*. It was owned and edited by one James Hume. In its issue of November 24, 1842, it contained the article on Dwarkanauth Tagore, printed below. Ed *M.R.*]

THIS distinguished citizen of Calcutta (and now of Edinburgh) was on Friday, the 30th ultimo honoured by a special interview with her Majesty the Queen, at Windsor Castle, prior to his departure for Paris, on his way to Marseilles, to embark for India. On this occasion, we have been given to understand, her Majesty's reception of the Baboo was distinguished by the most gratifying kindness, as was also that of Prince Albert. Her Majesty signified her gracious intention to make Dwarkanauth Tagore a present of her portrait, accompanied by one of her Royal consort; an offer which it is quite unnecessary to say was most gratefully accepted. We cannot ourselves imagine that any mark of royal favour could be more acceptable to our justly honoured Indian fellow-subject than that which it has pleased the Queen to bestow, and we are confident that the flattering notice she has exhibited to the enlightened and liberal-minded Hindoo who has visited our country will endear her to the hearts of the great nation to which he belongs, and produce a happy effect upon the minds of those who have had too much cause to think themselves overlooked by the men who have been sent from this country, and entrusted with the rulership of our Indian territories. It remains to be seen how far her Majesty's Ministers sympathise with their Sovereign in their desire to do justice to the singular, we might say unexampled merits of Dwarkanauth Tagore. We have the best means of knowing that the Baboo aspires not to the possession of those titles, which in the eyes of men less ennobled by moral and intellectual endowments wear so many attractions. But it is not, therefore, less the duty of those who advise the Crown in the dispensation of honorary rewards, to distinguish eminent worth, by conferring upon its possessor some special token of recognition and appreciation.

Already, an inhabitant of Bombay, a man of kindred spirit, and similar position, has been honoured by the gift of knighthood. We cannot then believe, that such a man as Dwarkanauth Tagore will be suffered to leave our shores, undistinguished by some mark, which shall demonstrate to his countrymen the estimation in which his rare virtues are held by the present administration. In every situation of life Dwarkanauth Tagore has presented a noble example to all around him, whether Native or European. As a private individual, by his unbounded hospitality, his uniform urbanity, and his princely munificence—as a government functionary, by the sedulous and faithful discharge of the most important duties—as one of the largest landed proprietors, by his constant efforts to ameliorate the condition of all belonging to his estates: and as a merchant, by his undeviating honour and enlightened enterprise, he has won for himself the esteem, the confidence, and the lasting gratitude of all classes in Bengal. So high was the opinion of his rare merits entertained by that late Governor General Lord William Bentinck, that the nobleman was most desirous that Dwarkanauth Tagore should receive through him some title, that should indicate the high estimation of the government. Lord Auckland, we know, has long honoured Dwarkanauth Tagore with his friendship, and would be the first to rejoice in the elevation of one who has co-operated with him in all efforts to promote the prosperity of India and the welfare of its people. The fellow-citizens of Dwarkanath Tagore have given the best proof of their warm attachment to him by voting him an address and raising a public subscription to obtain his picture, or a statue, or both. We are not surprised at these. Dwarkanauth Tagore and his family, in connexion with Sir Edward Hyde East, were the projectors of that noble institution, the Hindoo College. The School-Book Society, the Medical College, the Native schools of Calcutta and its neighbourhood, the Vernacular Schools, the Fever Hospital, the District Charitable Society, the Blind and Leper Asylums, and last, though not least, the Landholders' Society, are all indebted to Dwarkanauth Tagore and his family, either for their existence or those liberal contributions upon which their continuance and success depend. Such patriotism and philanthropy demand our admiration and esteem; the confident belief that the man who has by their exercise bestowed so many pure and lasting blessings on his country, will receive from the hands of those to whom its destinies are confided some appropriate distinction. The respect and flattering attention with which Dwarkanauth Tagore has been everywhere received since he came to Great Britain has been highly creditable to the people of this country. The effect, we trust, will be to attract many of the natives of India to our shores, that the mass of our country men may no longer be strangers either to the features, the intelligence, or the virtues of the Hindoo race. We fervently hope that the time is at hand when that friendship which is the fruit of knowledge and mutual esteem will spring up between the two nations, and be perpetuated without interruption to the latest period of time.

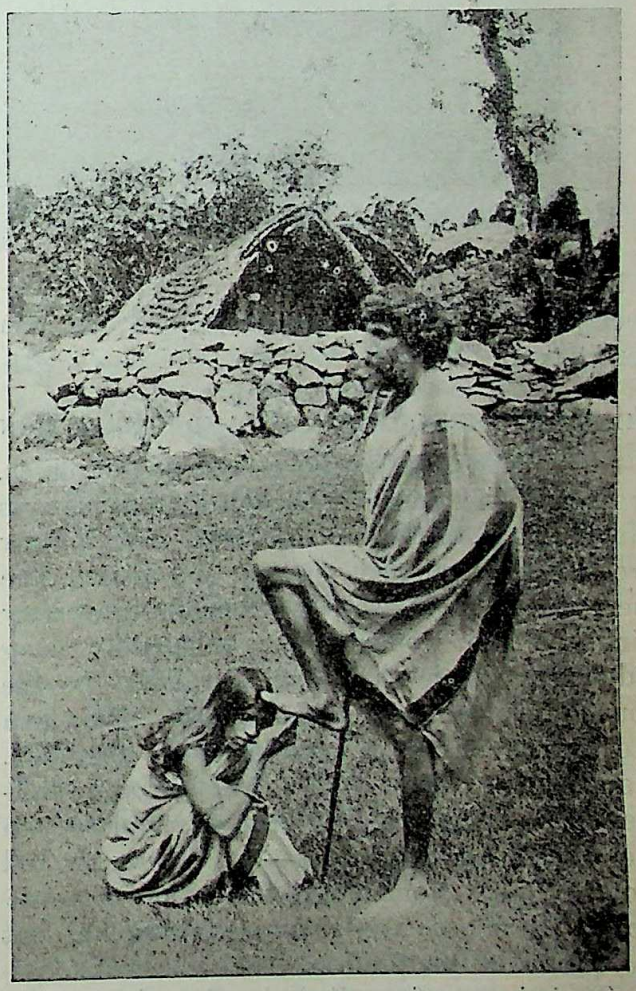
THE TODAS

THE ORIGINAL HILL TRIBE OF THE BLUE MOUNTAINS

By M. FATHULLA KHAN

THE Todas of the Nilgiris (or Blue Mountains) are an aboriginal tribe that has attracted the attention of many travellers and anthropologists. They claim to be the original inhabitants of the hills and masters of the soil.

In the year 1117 A. D. a general of the Hoysala king Vishnuwardhan seemed to have frightened the Todas, offered up the Nilgiri peak to the goddess of Victory and pursuing the Malyalis, made himself master of Kerala. It is, therefore, probable that the Todas were on these hills before 1117 A. D. and that the kings of Kerala or Malabar at that time claimed them as their subjects and the Nilgiris as part of their dominion. Besides, this fact also receives some confirmation from the Tamil classsic entitled *Silappadhikaram*, the date of the composition of which cannot be further from the two dates, 17th May, 756 A. D., and 23rd July, 756 A. D., alluded to in the poem itself. From this work it is inferred that the Chera king looked upon the Nilgiris as a place of rest for himself and his troops, and also that there was a route by which men, horses and elephants could be transported to the Nilgiri plateau. So, the Todas might have come to the Nilgiris either as the camp followers of the Chera king or a consequence of the hills having been opened up on the occasion of this or some other royal march. Another link between the Todas and the Chera king is shown by Dr. Rivers who, when he visited the Nilgiris in the year 1901, found a Toda *mund* called Kannagi *mund* in Keradar villages, belonging to the Keradar clan of the Todas, in ruins. This mund has since been rebuilt and is situated in Meknad, very near the Sisipara route leading from Malabar into the Nilgiris, one of the probable routes by which, according to Dr. Rivers, the Todas entered the Nilgiris. Kannagi, a Tamil friend from Madras tells me, is a fairly common name, at present, which came into use with the story of Kovalan and Kannagi. Kannagi having been taken up into heavens, her worship was solemnly instituted at Vanchi by the Chera king Sanguthuvan who received, on the occasion, the homage of countless Indian princes, including Gajabahu, the ruler of



Toda blessing a woman

Ceylon, who is said to have introduced into his country the worship of Kannagi. The goddess Kannagi or Pattini has been from very early times one of the four principal deities worshipped on that island. Thus, we are led to conclude that the Todas could not have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

A Toda family

occupied the Nilgiris much before the 8th centry A. D.

THEIR FEATURES, DWELLING AND OCCUPATION

The Todas, unlike the people of the plains, are tall. The average height of the man is 5ft. 7 in. and of the woman 5 ft. 1 in. They are well-proportioned, strong and fair. The men, resembling closely the Romans, are very hirsute. The women wear beautifully long side-locks which they curl carefully on the round stick smeared with butter. The men are active, untiring, grave and dignified. Nevertheless they are cheerful and well-disposed. They hold themselves superior to the neighbouring tribes—the Badagas and Kotas. Their women are smart at domestic work. In most cases they are handsome, but are prone to temptation.

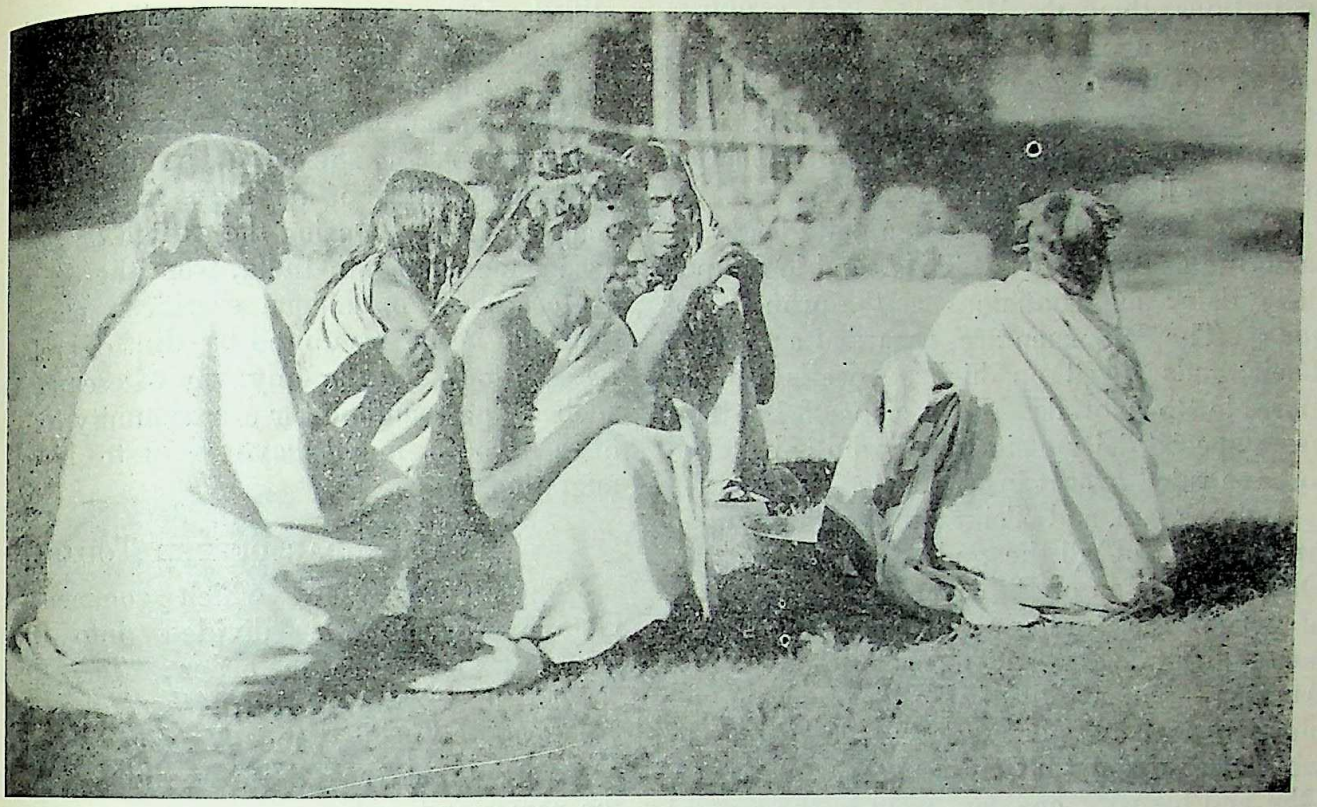
Their houses form little hamlets known as Munds. These consist of four or five dwelling huts, of which the larger one forms the dairy and a buffalo-pen. They are usually picturesquely situated near a 'shola' (forest) or a stream. The huts are made in a quaint way, looking like half a barrel, with barrel-like roof. The sides project in front, forming wide eaves, and on this side is the door—an entrance so small and low, for it is placed on the same level with the ground, that one has to go crawling on hands and knees to enter in. On either side of the door outside is a sort of earthen bench. And inside, a raised platform to sleep on forms a flank on one side of the door, and the rest of the place is used as kitchen and dining place. The hut is surrounded by a rough stone wall about three and a half feet high with one opening in front, purposely made too narrow for a buffalo to come in.

The Todas wear a simple dress. Men, women and children, all put on an upper white sheet called the 'putkuli', the borders of which are embroidered in coloured thread. It is thrown right round the shoulders. Inside the putkuli the men tie a small strip of cloth, but the women do not. Any kind of head-dress is unknown to them.

The only occupation of the Todas is the tending of their buffaloes, and to make butter and ghee. At sunrise, the men salute the sun, with a queer gesture, putting the thumb to the nose and spreading out the fingers in a manner similar to the English school boy's sign of derision. Then they let the buffaloes out of the pen, milk them, and drive the herd to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



Toda girls at their toilet

grazing ground and laze away the day till evening. They milk the buffaloes again in the evening and churn more butter. Saluting the lamp in the manner the sun was saluted in the morning, they retire to bed. The women are prohibited from entering the dairy or to have anything to do with the milking or churning. They attend to ordinary household work.

The Todas migrate periodically from one hill to another to find sufficient grazing for their buffaloes. These migrations are attended with elaborate and ostentatious rituals.

Social and Religious Arrangements

The planetary week-day, as a chronological element, figures constantly and to a startling extent in the religious and social arrangements of the Todas. The *madnol* is a day of the week which is observed as a holy day and a day of rest in every mund, while the *Arpatznol* is the day of the week which every man has to keep sacred as being the day on which his father died. The most frequent madnols are Wednesday and Friday which are sacred in six clans. Sunday is sacred in five clans, Monday and Tuesday in three, Thursday in two and Saturday in none. Funerals can be performed only on certain days in the week and dead bodies have to wait until those days arrive. The Pykara can be crossed only on certain days of the week. Their year commences with the Teututusthchi ceremony on the first or second Sunday after the New Moon in October when the dry grass on the high hills is burnt, as a public signal, by the dairy priest. Their week days are *Asvom* (Sunday), *Tuvom* (Monaday), *Om* (Tuesday), *Puthvom* (Wednesday), *Tam* (Thursday), *Pilivom* (Friday), and *Tanivom* (Saturday). The peculiarity of the Toda week is that *Om* or Tuesday is the first day of the week, and not Sunday or Saturday.

Their Religion

The Toda ceremonies of birth, marriage and death and certain other domestic ceremonies, connected with fire-worship, ear-boring, puberty, pregnancy, etc., no doubt imply some form of Hinduism, but the articles of faith of the Hindu religion as it is ordinarily practised, involving temples and images of gods and goddesses and gifts to Brahmins, are not found in the Toda religion. If the Todas brought with them from the plains the whole body of their present-day customs and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

institutions then the Hinduism of a 1000 to 1,500 years ago has to be looked into for the parent cult that gave rise to the Toda religion. But, it is precisely about this epoch, from 500 to 800 A. D. that there is no information in matters literary or religious.

The Todas believe that a deity leads the same life as the mortal Toda, and look upon their dairy and buffaloes as the property of gods. The dairy-men are regarded as priests. Their gods dwell on highest peaks but are invisible to mortals. Each clan of the tribe has a special deity of its own, who is believed to have ruled over it in past ages.

Ohn, a god, and Teikrizi, a goddess, stand pre-eminent of all the gods. I was told that Ohn was the son of Pithi, the earliest immortal of whom the tradition speaks. He created men and buffaloes and became the ruler of Amnodr—the world of the dead—where he now lives. The story relating the manner in which he created them is very interesting. Ohn and his wife, one day, went to the tops of the Kundahs and Ohn laid an iron bar right accross them. Standing at one end of this he brought forth 1,600 buffaloes from the earth, and his wife at the other end created 1,800. The first lot were the progenitors of the sacred herd and the second were the first parents of the ordinary buffaloes. Holding on to the tail of the last of the former lot came out of the earth a man ; who was the first Toda. Ohn took one of his ribs and created from it the first Toda woman. Ohn had a son who was accidentally drowned. In his great grief, Ohn left the plateau and went away to the world of the dead to live with his child. Thereupon Teikrizi took his place as the ruler of the Todas. It was she who originated, as she happened to be a woman, most of their rites and ceremonies and divided them and their buffaloes into several clans and classes that still exist.

The offering of buffaloes in sacrifice is not unusual in South India and the Deccan even at the present day ; but the peculiarity of the Toda sacrifice is that the buffaloes are slaughtered not to secure the favour of the gods but for the safe conduct of the departed soul to Amnodr, the land of the dead. Assuming that this utilitarian idea of sacrifice was a development of the Toda life on the Nilgiris, still the fact remains that the religious idea of atonement was the main key-note of the ritual in their original home, as it still is among similar communities on the plains. From the times of Abel the shepherd has usually sacrificed the firstlings of his flocks and herds as a religious duty. During the period of Buddhist ascendancy in South India, from the 5th to the 7th century A. D., animal sacrifices may have probably been prohibited by dint of religious persecutions, and the only way of escape from such a persecution for a community like that of the Todas might have been to resort to migration.

The Calendar of the Todas

The Toda year, which commences in October-November, is divided into twelve months. They are in order: *Tai, Emioti, Kudri, Atani, Natani, Ani, Atheri, Adi, Ovani, Peritashi, Tudeivi,* and *Kridivi.* It is a noteworthy fact that these months, following the names and order, more or less resemble the Tamil solar months. The only exception is that instead of 'Margali' Atheri is inserted. The year is evidently solar and tropical, for it commences with a definite stage of the tropical year when the grass is dried up in the month of October. And it is interesting to note that the Todas mark time with the aid of the flowering of certain trees. They not only note the annual flowering season of trees but the circumstance that one species of trees (a strobilanth) flowers once in six years (hence called in Botany *Sexennis),* another once in twelve years, and a third once in eighteen years, enables them to reckon age by the number of times a person has seen the flowering of the respective trees.

Though the year is tropical, the months are lunar and are reckoned from new moon to new moon. And in a solar tropical year there are not always twelve lunar months, but in seven years out of every nineteen they exceed by another month. When I inquired from some of the aged Todas as to how they regard this occasional thirteenth month they seemed perplexed and unable to answer me. Evidently it is passed off without being reckoned as the thirteenth because, in any case, it is essential for them to wait until the tropical sun brings about the drying up of the

A Toda temple

grass, the flowering of trees and then only would the count of twelve months to a year begin again. The fact that the Todas gave to their lunar months the names of the twelve solar months indicates that they came from a place where the Tamil nomenclature of months was in use, and not from Kanarese or Telugu parts where solar months have never been in use. There are communities in India who invariably employ the lunar reckoning for all purposes and also those who employ that reckoning only for religious purposes, while their days for secular purposes are regulated by the solar reckoning. Save Bengal, Orissa, Malabar, and the Tamil districts of South India who employ largely the solar reckoning, all other communities, including the Kanarese and Telugu people, observe the lunar system. Thus it may be safely inferred that the Todas acquired their notions of the calendar in a country where either Tamil or Malyalam was the prevalent language. Here it follows that the Todas did not, in all probability, come, at any rate, not all of them, from Mysore or Coorg. Nor is there any ground for the suggestion that the Toda calendar might have been borrowed from the Badagas, who, at the present day, follow the same reckoning as that of the Todas, for the reason that the Badagas must have followed originally the lunar reckoning and that if they follow, at present, the Toda reckoning it must be due to the Tamil that has for all practical purposes become their common language.

Their Language

The language of the tribe is Dravidian. It is more akin to Tamil than to Malyalam. The Toda words are pronounced exactly as in colloquial Tamil, but usually their sound effect is puzzling. This seems a case of imitation from modern colloquial Tamil. To make a thorough investigation of the Toda language one has to study its earliest grammatical forms in the various formularies of prayer, magic and incantation, which any community would continue to recite in a form as little removed as possible from the primitive, lest the words, if modernized, should lose their spell or potency. And judged by such a method the Toda dialect will be found an old relic of ancient Tamil.

Polyandry

It is regretful that today this interesting hill-tribe, small as it is, is rapidly degenerating under the stress of polyandry and other immoral practices. However isolation may have helped to throw a veil in the past over the growth of such practices, it cannot be said that they are wholly the result of the Nilgiri migration. I am told by a Hindu authority that polyandry of a kind has always existed in South India and has not been confined to Malabar only; and that, in fact, the Mahabharata is a standing plea for polyandry.

The Toda Dance

The Toda dance is very simple. The men join arms in a circle and move round with a sort of hop to the accompaniment of musical shouts of *ha'-ha'-ho'h, ha'-ha'-ho'h, ha'-ho'h.* The music of motion is not much in evidence. Their women-folk do not dance, but they sing in an exceedingly peculiar tune with closed lips.

The way in which the Todas greet one another is strange and singular. While the younger in age kneels down the elderly Toda lifts up his left foot and touches the head, thus blessing the younger one.

My ramblings over the Nilgiris in search of the Toda munds have always been extremely pleasant; and I admire the personal dignity and pride of race which stand out in every lineament of the Toda physiognomy, their rude insistence on the maintenance of patriarchal authority, the truthfulness and the manliness of the Toda and the simplicity of his outlook on life.

COLLECTIONS OF THE NAHAR MUSEUM

By AJITKUMAR MUKHERJEE

IN the early days of Mr Puran Chand Nahar a saying was current in his native village सिकन्दर शाह बादशाहके माथेमें दो सींग *i.e.*, Alexander the Great has got two horns in his head. He was greatly attracted by this saying, and tried to find out its meaning, in which he did not succeed for a long time When he was reading in the Presidency College he secured a gold coin which struck him for its similarity to the contents of the saying. To find out the actual date of the gold coin Mr. Nahar sent it to late Mr. Rakhaldas Banerjee who was then in charge of the Calcutta Museum. It is believed from the report of late Mr. Bannerjee that this coin is one of the Asiatic issues of the great Macedonian conqueror.

"The coin just discovered differs from all other known types of the coinage of Alexander··· on the obverse it bears the head of Alexander facing the proper left and wearing an elephant's scalp. It is now well-known that the wearing of the elephant's scalp instead of the usual helmet or Kansia indicated either a raid into, or the occupation of a portion of Anina or India. Thus we find that Demetrius, the son of the Bactrian king Enthydemus, signalised his conquest of Northern Anina by issuing silver coins, on which he is figured as wearing the elephant's scalp. The earlier Greek conquerors of India prized the possession of elephants above everything. This is shown by the zeal with which Alexander enforced his demand for elephants from the vanquished Indian princes ·····It is no longer doubted that Alexander established a mint in India during his three years' stay (330 B. C.-327 B. C.) The square bonny coins are well-known, but at the same time they are so very rare that even the Indian Museum does not possess a specimen. These coins are to be found in the cabinets of a few private collections of Indian coins. The new coin is unique, both as to its minting and type."

On the reverse of the coin we find the figures of winged victory which is so very common on the gold issues of Alexander and Selukus Nicator.

The importance of this unique coin, regarding which further researches may lead to the discovery of a lost chapter of our history, is obvious.

From this time Mr. Nahar's enthusiasm steadily increased; he explored all sorts of likely and unlikely places throughuot the country in a fascinating search for old paintings and manuscripts and sculptures, in course of which he passed through many adventures. He met with frequent disappointments, but his indomitable energy and perseverance prevailed in the long

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...n, and in the end he was able to establish the ...ow widely-known Nahar Museum.

Mr. Nahar's collections are too extensive to be dealt with in a short article. So we propose to give only a brief account of them. The Nahar Collection consists of various sections, such as, paintings, speacially Rajput, Mogul, Jain, and Kangra painting; paintings on ivory, mica and glass; terra-cotta, plaques, seals, inscribed tablets, banners, Jain scrolls, putta, partris, coins and a library of rare books on history and archaeology.

We shall first take into account the old metal images of Ganesh and the Tantrick Kali. These Tantras prevailed in India during the Buddhist period. Most scholars agree that when the Caliphs of Ummeidd and Abbabasid preached Islam in Turkistan, many folk-religions existed in the localities mentioned above. The Caliphs abolished these religious systems, and the priests were driven out. They came to India where they spread the Tantras. So far is known about the origin of Tantras in India. Authentic history cannot go beyond these facts. Buddhism, which, at this period of Indian history, was dominating every sphere of life and society, assimilated these Tantras and preached them as part of their religious system, and the result was the introduction of some new Tantrick gods and goddesses. At first these deities had no shape, they were worshipped mostly like those of Turkistan. Afterwards a simple form was given to them, and the Kali image perhaps dates back to the 6th century A.D.

In the meantime, Buddhism was gradually over-shadowed by the new form of Brahminical religion and when the Brahmins became powerful, they took up these Tantras and began to preach them as ideal gods and goddesses of their religion. Later on, these gods and goddesses were gradually developed to the present form, but if we look at these Kali or Ganesh images, we can easily understand that they are different from what they had been in their original form. There is no Shiva under Kali's feet, no warlike vigour in form. They are simply made of bold lines of bronze. Ganesh has no big belly as he has in the present day, and he is wonderfully curved on bronze. Ganesh was found in Behar near Gosharam Buddhist monastery while digging a well and the Kali image in the district of Murshidabad in Bengal.

The image of Adinath, the first Jain Tirthankar is a striking sculptural specimen of the Pala period. It was found in the district of Bankura. A legend tells us that Adinath, better known as Rishavadeva, belonged to the Ikshaku race and was the son of King Nabhi and queen Marudevi. His place of birth was in the country of Kosala, but according to some, in the north of Kashmir. He was born towards the end of Jugalik period. According to the custom of the time he was married to his own twin-sister Sumangala, and another, Sunanda, whose brother died in childhood. Sumangala's issues were Bharata and Brahmi (the twin) and ninety-eight other twin sons and by Sunanda, he had Bahubal and Sundari. From the decendants of Bharata and Bahubal, the Surja and Chandra dynasties respectively originated, and the country was called Bharat after the eldest prince. He abdicated his throne in favour of his sons and laid the foundation of the Jain religious organization

Mr. Puran Chand Nahar

in this era. He is represented as of golden complexion and with a bull for his cognizance.- On his right side there are figures of Chandra prava in **कायोत्सव** attitude and Avinandan, the fourth Tirthankar. On the left side is Santinath and Parshwanath. Here the peculiarity of the hanging hair of Rishavadeva is noteworthy. (*Epitome of Jainism by Nahar and Ghose*).

The second figure originated from the Mathura school before 2nd century A. D., fragment 8″×6″ of a medallion, wearing *dhoti* with ends arranged in pleats between the legs and holding the girdle with his left hand, his bending down and drawing towards him the head of his lady-love standing crosslegged to the left, his right hand

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

embracing her and appearing beside her right breast. The subject is a couple in love-making.

Then we come to the third figure which is of the Mathura School of Art. The bust of a woman with her upper body unclad, perhaps dates back to the Gupta period.

Then the fourth figure is Bajrasatta of the Pala period, and it is nearly of the seventh or the eighth century A. D. Vajrasatta, the sixth Dyani Buddha, is seated on the double lotus in the **पर्यांक** attitude. His right hand appears over his breast and holds in the upturned palm the Vajra, and in his left hand, is the bell. He is clad in a piece of waist cloth and is decked in Karanda Mukata. Below the lotus there is an inscription **ॐ देव धर्म्मोयं गज वैद्य श्री गेपतेः।**

The Vishnu figure of Bengal belongs to the tenth century A. D. To his right and left are Luxmi and Swaraswati. Gaja-Simha, Kinnara musicians and ornamental Kirtti-mukha are on the top, and two flying Vidyadhara couples, with garlands in their hands, face against the two clouds. This Vishnu image is a masterpiece of Bengal art; it has very bold line and technique and its pose is wonderful.

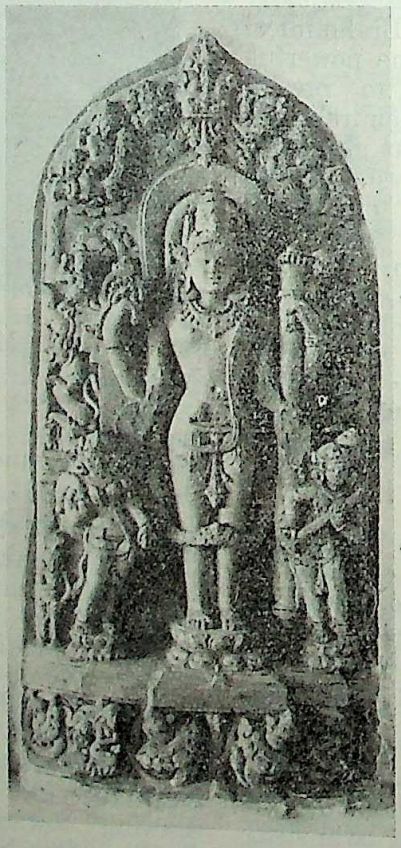
Vajrasatta



Vishnu

Besides these remarkable sculptural specimens, there are also other noteworthy images of different eras in the Nahar Museum.

As regards paintings Mr. Nahar has collected brilliant specimens of rare pictures. In his art gallery, the earliest illustrated manuscript known is one of the Kalpasutra, on palm-leaf, dated equivalent to 1237 A. D., deposited at Jain Bhandar at Patan (N. Guzarat). Of the next period the Kalpasutras are mostly dated 15th century A. D., and one of these illustrated manuscripts is preserved in the Nahar Museum.

The pictures of each page of these MSS. are brilliant statements of the facts of the life of Mahavira, where every event is

seen in the light of eternity. The colours employed in the illustrations of Jaina MSS. are gold, yellow, blue, white, black, green and pink. The angularity of the features and the projection of the further eye which are particularly the peculiarities in this drawing of human forms, are incidents of local colour independent of the quality of the art, the inevitable marks of time and space.

There is a difference of opinion regarding the traditions of Jaina art. Mr. Coomarswamy says in his introduction of Jaina painting: "The tradition of Jaina art is as sold as that of Buddhist art, and developed under similar condition and partly in dependence on Buddhist art." But the French scholar Ivan Stchcukine in his book—*La Peinture Indienne Des Grand Moghols*, shows, by illustrations, how after the degradation of Buddhist art, Jaina painting developed by the gradual slow steps of change in the Buddhist art in the projection of the further eyes and the delicacy of lines.

Thus we see the successive steps in the development of Jaina painting—the first stylistic type dating back to the earliest period, the second to the period of contact with the Moghul art, and the third to the seventeenth century.

In this connection Mr. Ajit Ghose says in one of his articles, "The development of Jain painting," published in *The Statesman*: "There is a stylistic resemblance between the 15th century Jaina miniatures and the contemporary painted book covers from Bengal in my collection. An example is a unique cover from a manuscript of Vishnupuranam written in Bengali in 1490 A. D. There is a similarity in the conception of forms as shown in the profiles of the faces in the exaggerated angularities, in the shape of the elongated eyes and in the inclination of the bodies and sinuosities of the figure drawings. The colouring of each is individual, but the choice of cinnabar for the back-ground is common alike to the 15th century Bengal artists and Jaina contemporary."

A Tibetan Painting. Buddha Preaching

In the later period "Display on the Ship" is painted. Though there is nothing noteworthy in its painting, it is very important from the ship point of view. The different soldiers and the public are showing various displays on this gigantic six-decked ship. To those who have seen only a few specimens of earliest Indian ships, this picture will prove useful.

We shall now describe a Buddhist Tibetan banner. Mr. Alice Getty in his book,—*The Gods of Northern Buddhism*, says: "As regards painting Tibet lived at the outset upon its borrowings from Nepal or Northern India but very few manuscripts of this period remain to us... In its later development Tibetan painting transformed its Indian models at will, without experiencing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

any foreign influence, that of China, so far at least as concerns fineness of brush work and perfect sureness of line."

It is very interesting to note that the Tibetan and Nepal paintings are closely connected with the art of Bengal, and they were greatly influenced by the Bengal School of Art. Mr. Getty also is of opinion that in Bengal an art analogous to that of Magadha lasted till the eleventh century miniature paintings on palm-leaves, whose technique passed presently to Nepal and Tibet.

A characteristic feature of the painting of this banner is the brightness of its decoration and also the harmony of its subject-matters. Buddha is easily distinguished from all other figures by his pure grace and powerful expression. And though it has turned into somewhat formal, nevertheless it has an intrinsic charm of its own, apart from mere technical excellence. Besides this, there are also many valuable banners of different schools of art in the Nahar Museum, but it is almost impossible to describe them in detail.

There is another section in the Museum, the Kangra school of painting. Nurpur, Basoli, Chamba and Jammu, all in close proximity to Kangra, were the homes of this particular school of painting, and a considerable amount of work was produced by the artists of this school. Pictures are forthcoming, specially portraits, which date from the middle of the seventeenth century, and perhaps are the only kinds of their time. The Kangra Kalm or Pahari painting does not denote great inspiration or display, any decided expression of thought or feeling. It is an art of patient labour and naive devotion. Its chief features are delicay of line, brilliancy of colours and minuteness of decorative details. (Percy Brown's *Indian Painting*).

In the picture, the Toilette of the Queen, we see the brightness of colour and the movement of life and activity. Here all the figures show the signs of sympathy and softness in the treatment of their graces. There are also many other pictures belonging to the Kangra School of Art in the Nahar Museum.

Mr. Puran Chand Nahar's lifelong efforts have made this wonderful Museum possible, the value and importance of which, we hope, no longer require further introduction.

EDUCATIONAL RESPONSIBILITY OF A CENTURY OF PROGRESS EXPOSITION

By IDA M. GURWELL

THE buildings of the World's Fair at Chicago are probably more interesting than any exhibit they house. They present the new, the unusual, and are a complete departure from anything we have known. They seem unfinished but progress is unfinished growth. The architects, given new materials and new methods, combined with freedom in their use, have brought forth a modern architecture symbolical of progress.

For two thousand years mankind (Europe and America) has imitated the Greeks in designing its buildings. They studied their predecessors in Egypt and Babylonia and produced a beauty so rare, that all are impressed by it. The Greeks built walls by laying one stone upon another and supported the roofs by columns. In a modern world in unthinkingly copying this procedure we have become a little ridiculous.

Today steel and other building materials are manufactured. Time has out-lawed this slow painstaking method. Speed is an important factor. Great buildings are not built as they were two thousand years ago. They are now made of steel frames and brick or stone-faced blocks or other manufactured materials are fitted securely in, and section by section are raised to towering heights.

The arts, painting, sculpture, music, dancing, the drama, prose, poetry and oratory have changed. The subject-matter has changed and is constantly changing to meet the needs of our time. *Building material* is the "*subject matter*" of Architecture. It is reasonable to expect change in this art also.

The architects of the World's Fair are not pretending to build of stone. They are making structures of steel and broad slabs.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Ford building, biggest new individual exhibit at the World's Fair of 1934 in Chicago. Here the Ford Motor Co., and more than twenty companies supplying materials and parts for the Ford car built a display representing an expenditure of more than $ 2,000,000.

And all over the world men are studying the strange buildings.

Are these buildings beautiful ?

There is a difference of opinion everywhere. Some say the buildings are *not* beautiful because they are unlike anything we have seen. Others that the buildings are shocking us into a recognition of a beauty that is an outgrowth of our time. At least this much-discussed architecture belongs wholly to this age. It is not an imitation of anybody or anything.

What is the meaning of the word beautiful ?

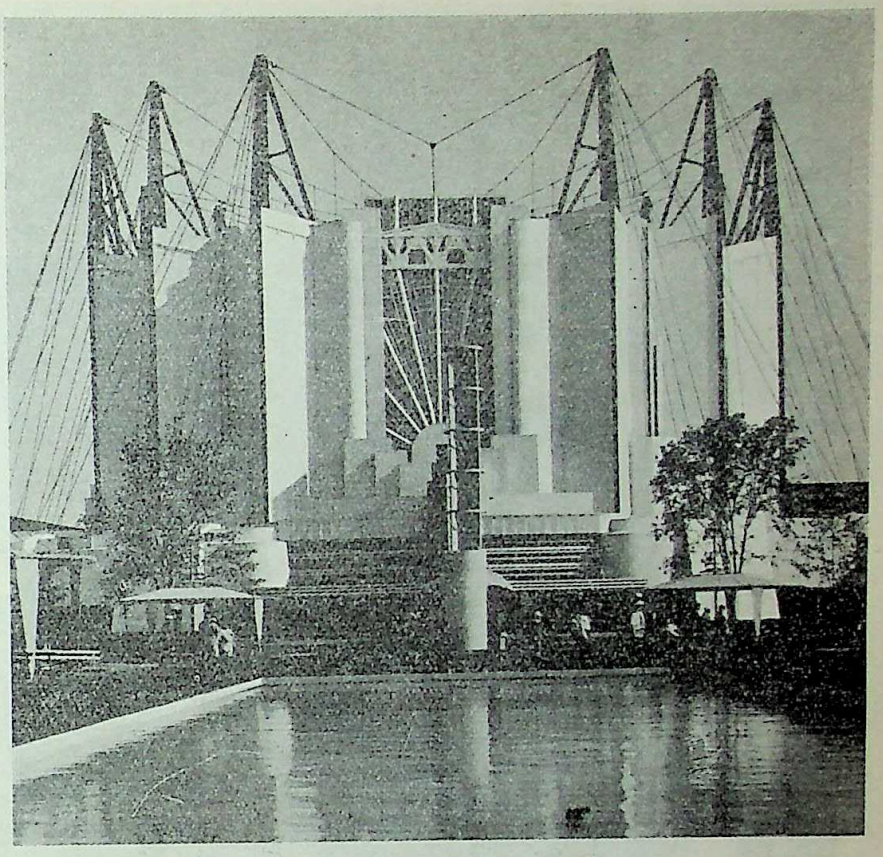
The most concrete definition we can find for the word beautiful is, "excelling in form or grace : complete and harmonious."

We cannot say the buildings excel in form or grace. The question arises : Excel what ? We learn by comparison, since there is nothing to compare we do not set anywhere with that definition as we know it. We take the remainder of the definition, "complete and harmonious." "Here we stray far from beauty, for these buildings that fill the World's Fair and complete a unit of modernity, resemble nothing so much as broken wooden beads strung along the sky line. Those who watched the final building of the Fair, never felt that these windowless, boxlike structures were ever quite complete. We might become accustomed to seeing the moon and stars through rectangular frames as we gaze skyward along a ragged horizon. This is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

different. We have known the soft lovliness of curves. All was unusual and irregular as we rode over the Fair by plane and looked down into the tops of the square fort-like buildings. We felt that some strange world was beneath us, and that a giant child at play with huge blocks had been frightened away and had left them strewn about in disorder. If we must use old definitions to define new things, then modern architecture is *not* beautiful.



Travel and Transport building, at the World's Fair in Chicago, in its bright new dress for the 1934 exposition. This is the largest dome in the world without inside supporting pillars. The roof rises and falls with changing temperature and it is called "The building that breathes."

Throughout the grounds one is brought face to face with these strange boxlike designs. The Model Homes with furnishings, the lamps that light the streets, the Great Hall of Science; the Administration Building, in fact, all the buildings follow the lines of modern architecture.

Of course the buildings are practical and fill a modern need. The design favours the speed of today's construction, and the world might come to find new values, and to see real beauty in the clean-cut utilitarian lines.

But, will America accept this architecture?

America has already accepted it. The new design is springing up in every part of the country. There are two kinds of architecture now, Greek and Modern. The Century of Progress Exposition is influencing not only America, but the world.

This Exposition was conceived to meet varied tastes. People are here from every land, from every walk in life. On one hand science beckons; on the other fun and the carnival spirit. Religious exhibits and things of the inner spirit offer opportunity for quiet contemplation. Industry depicts its story of progress and power. Art and music hold sway. Truly each person can find more than he can mentally absorb. What a world of knowledge for children? There is a magic island built purposely for them. It is estimated that one day in 1934, 500,000 children attended the World's Fair.

The interest of the world is focussed on this site. The grounds a short time ago was Lake Michigan, now an island containing 424 acres. It is a colourful shimmering jewel by day, and a glorified dream by night. Joseph Urban, famous architect and stage designer, sought to achieve a harmony of colour, that might also express the Exposition's deeper purpose. Here in this land of enchantment, colour is decorative in a practical way, planned to fit the architectural scheme, and to play a part in the festival.

As one mingles with the crowds at night, he stands in one of the greatest floods of coloured light ever produced. The colour lighting is done by gas tubes. This new light is produced by introducing rare gas into a tube from which the air has been pumped. The tube is sealed and electricity is passed through. The colour radiated is determined by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

South view of grounds of A Century of Progress Exposition, 1934, from Hall of Science. Right : the four Pavilions of General Exhibits Group. Left : Time and Fortune building, Cactus garden, Christian Science Monitor building, Hall of Religion. On the Island : the Horticultural building, the Mexican village, Hollywood, and the Casino.

element the tube contains, and by the colour of the tube.

The *Theme* of the Exposition is *Science*. It is with us at every turn.

The lighting of the Fair is of great interest. Forty years ago in America, people marvelled that President Grover Cleveland could press a button in Washington and start wheels turning at the official opening of Columbian Exposition. In 1933 a Century of Progress Exposition was lighted by the rays from Arcturus. Light that left Arcturus forty years ago, racing toward the Earth at a speed of 186,284 miles a second, lighted the Fair. Science caught the feeble beam when it arrived on Earth, and as it struck the great Telescope at Yerkes Observatory in Wisconsin, it was transformed into electric energy by means of photoelectric cell, amplified it by the methods of radio, speeding it on to Chicago, where it lighted the Century of Progress Exposition.

Science has come far. One day this would have been called a miracle. Today we call it Progress.

Too much ! Too much ! One is lost in a great sea of knowledge. What a responsibility?

DRAMA IN MODERN TURKEY

By A. G. CHAGLA

THE rise of serious drama in Modern Turkey has been phenomenal. Out of humble beginnings has evolved the nation-wide National Theatre Movement, which has influenced the social life of almost every village in the land.

The Turks belong to the orthodox sect of Islam, the Sunnis, according to whose tenets all representational fine arts are not worthy of practice by the "faithful". The argument advanced is that these are "superfluities" tending to detract man from treading the "straight and narrow path". The Persians, who belong to the sect of "dissenters", known as the Shiahs, have a different conception of the teaching of their faith which has been leavened by admixture with the artistic and spiritual heritage of ancient Iran. Like the Roman Catholics, they permit the use of art in the service of religion and quasi-religious observances. Thus, in Persia a whole school of sacred drama has grown up which annually represents for the masses the significance of the tribulation of Hussain, the grandson of the Prophet, who was killed at Kerbela (Iraq) in 680 A.D., under exceptionally tragic circumstances. Sacred drama of this type, practised through the centuries, has eventually crystallized into a national art-form of Moslem Persia. But it is doubtful if it will survive the present almost irrational onslaught of "modernism" that is sweeping over that unhappy land.

In Turkey the reverse has been the case. Till only a few years ago the practice of drama and music remained in the hands of the lowest of the low—the "professional entertainers." In fact these arts were never indulged in or encouraged by the respectable and the really intelligent sections of the people till very recently.

During the days of the Sultans two types of banal stage entertainment were in vogue. Both were relics of the barbaric Middle Ages, the days of the proverbial "Arabian Nights." One was "Turkish" dancing, worse in its meaningless suggestiveness than even the so-called "Egyptian" dancing. So obnoxious and lacking in grace and good taste was this, that the ultra-modern Turkish State thought it fit to penalize it in the new regime by an Act of the National Assembly. The other stage entertainment in vogue was a low type of musical comedy, having the dancing mentioned, and an equally abominable, suggestive melody-making as its necessary and inevitable adjuncts. Since the prohibition of Turkish dancing of the old type by law, this incipient drama has died a natural death. Turkish music, too, has taken a different turn and now seeks inspiration from folk-songs. In 1929 a parliamentary commission was appointed to investigate the sources of Turkish music and to find out ways and means to preserve the national heritage of folk-songs and dances. As a result agreement has been made with a British Gramophone Co., to record folk-songs as interpreted by the oldest living exponents. Modern "staff notation" has also been officially recognized as suitable for the purposes of Turkish music, both vocal and instrumental.

The beginning of modern drama in Turkey can be traced back to the influence of the "Young Turks" early in the present century. During the later days of Sultan Abdul Hamid a small band of intellectuals, both men and women, had formed themselves into a group for the study of foreign literature and drama. They all belonged to the "Young Turk" party of intellectuals who aimed as much at social revolution as at overthrowing the domination of the Sultans. This group definitely attempted to evolve a school of indigenous Turkish drama, on the lines of the serious drama of Northern and North Western Europe. But their work had to be done more or less in secret, for, according to the laws then reigning, woman could not go out into the streets unveiled, much less could she take part in a dramatic performance. As apart from the official interference, they had to contend with the social prejudice of the masses and the classes against drama as such, and against art in general. This was but natural because all stage performances were identified in the popular concept with the low type of musical comedy that was seen being staged by the vilest people in none too reputable surroundings. Fortunately there were at the time not only men of high ideals and culture directing the efforts of this group of stalwarts, but men of ripe experience who had served their apprenticeship in the leading theatres of Vienna, Paris and Berlin. (Turkey at this period was still under the cultural influence of France, though the political tendencies favoured German influence.) More fortunate still, these men had a wonderfully balanced mind and a sense of proportion. Instead of attempting spectacular "shows," then in vogue in Europe, or wasting their time on a type of drama foreign to their own life experience or not in conformity with the social development of the people, they made a very modest beginning, taking each step with precision and care. As Strindberg and a few other intellectuals had done earlier in North Western Europe, they secretly established what was virtually an experimental "chamber" theatre.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Here they experimented with the lesser works of especially French and German dramatists of the "naturalist" school, that preceded the advent of Ibsen. Attempts were also made to write some original plays on Turkish themes to suit the hitherto undeveloped talent of the wholly non-professional staff and actors. It is interesting to note that some of these budding dramatists were ladies of culture, who have made a mark in the post-revolution era, both as original dramatists and as translators of foreign works. This continued, under very difficult circumsances, for a good few years and thus a sound foundation for future work was laid.

Just when the preparatory work was done and arrangements were being made to launch a more ambitous scheme, came the Turkish reverses in the Balkan, which, as future showed, were a definite turning point in Turkish history. The immediate effect was a tragic demoralization on the one hand and a grim determination on the other, on the part of the younger generation, to free the country from the yoke of the tyrant and tradition. Before the people could regain self-confidence, the nation was again plunged into the world-war of 1914-18 by the Sultan and his advisers. But all these reverses proved a blessing in disguise: they were a severe test of the spirit of the nation. After the war came the revolution of 1919-20 and the consequent freedom of the people from the age-long yoke of the sultans and the thraldom of the clergy. Social conditions, *which had already begun to change,* were completely altered by the beneficent tyranny of legislation. Most significant of all, the freedom of women became a fact overnight.

This psychological as well as political phenomenon proved to be the decisive factor in re-shaping drama in post-revolution Turkey.

The psychological condition of the people immediately after the revolution was intriguing. They had all along wanted to throw off the shackles and to be free. But now that political freedom had been attained they felt all the more dissatisfied with life. They had not yet understood the full implication of freedom and found the responsibility most trying and novel. Except a few stalwarts the majority could not help fighting shy of the innovations that were being introduced almost every minute. True, these innovations were the natural and inevitable result of freer conditions, but the people were not in a mood to see that yet. Frankly, they were at first bewildered to see the social consequences of "This Freedom". Even radicals admit this today. The legislators could only coerce the people into outward submission, and no more. The human mind can evolve through a laborious and painful process alone. The people realize today, more than ten years after the revolution, that though they are politically and physically free, they yet have their inner bonds to contend with. These bonds are the result of centuries of thraldom at the hands of a tenacious priestcraft and lack of understanding and brutal cruelty on the part of their old rulers and self-centred leaders.

It is at such a period of national re-valuation of ideas and ideals that all art and especially drama—at a higher cultural level, music—help a people to understand their national mind. The *Polonaise* and the *Mazurka* of Chopin, the later Symphonies of Beethoven, the works of Ibsen, to mention only a few great works, were the result of similiar periods of introspection in the histories of their respective countries. Art undoubtedly helps a nation, as it does an individual, to discover and to reveal the innermost convictions. Thus it helps to crystallize ideas into ideals, resulting in a far-seeing and rational outlook.

Judged by this standard, the Turkish National Theatre has more than justified its existnce in the difficult post-revolution era. Thus the work of the pioneers has borne ample fruit.

As has been mentioned, the abolition of the veil brought about a complete change in social conditions. These were very favourable to the growth of serious drama. The Turks now found that the social and domestic problems that confronted them were almost identical with the problems that faced the Scandinavians fifty years ago. This was the period when Ibsen wrote *Pillars of Society* and *Doll's House.* Norwegians in particular, and people of the rest of North Western Europe were then just making a bid for a freer social life. Turks today were similiarly situated. So instead of groping for a new form to express their newly found inner urge for social honesty, the plays of Henrik Ibsen were taken hold of and adapted for the Turkish stage, as correctly interpreting the new impulse in the Turkish national and social life. Indeed, it speaks very highly of the forethought of Turkish men of letters that this impulse has been recognized so soon. Today conscientious efforts are being made to nurture and to foster it.

Of the old "Young Turk" group many had perished by now, either in the war or in the revolution. A few that remained saw the wonderful opportunity that now offered itself to forge ahead. They however saw that nothing could be done without powerful support. Some of them had risen to be office-bearers in the new people's own government. With patience and tact they ultimately succeeded in gaining support of some political leaders of note, and of the great Ghazi. A ramshackle theatre was hired and under the patronage of some leaders of new thought in Turkey the first public performance of a serious play was given in which men and women of high social standing took part. The already bewildered people were more bewildered still! But the far-sighted men of culture grimly continued in their terribly uphill

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

task. It would not be incorrect to say that the efforts of the Turkish National Theatre at this period substantially helped the people in the struggle with the past. Small groups were trained and sent all over the country and it was soon realized by those in power what a tremendous cultural and psychological influence drama of the right sort possessed and how very vital this influence could be in the corporate life of a community.

Soon a time came, however, when the leaders of this successful cultural movement felt that they had reached the end of their resources and nothing more could be done without active government support. The matter was taken to the Grand National Assembly. As a result the *Istanbul Sheheremaneti Darulbedayi* (The Istanbul Municipal Theatre) was formed. The old cultural group was formed into a semi-professional company and placed in charge of this theatre, *under municipal control.* It is from this centre that trained artistes are sent to every nook and corner of the country, not only to entertain, but to educate and to stimulate thought.

It would be interesting to consider the work of this National Theatre during one season. The programme of 1929-30, the period immediately preceding the world depression, is of especial interest as showing not only the range of subjects selected but also the high tone of each production. The plays presented are purposely kept above the level of riff-raff. Thus they are instrumental in stimulating thought and disscussion on the various problems presented on the stage. There are usually nine performances a week, including two *matinees* and the theatre is invariably crowded with the intellectuals, as a play is not repeated after it is withdrawn during the season.

1929-30 (Winter) programme consisted of seven plays—three original works and four translations. The method of translation and adaptation is interesting. The original settings and characters are retained absolutely intact but colloquial phrases and exclamations are given (as far as possible) their Turkish equivalents. Thus the exclamation "Christ !" in a play where the characters are all Christians is rendered "Khuda !" in Turkish. This method allows the audience to feel the characters as their own. The minimum of stage scenery and the latest type of hidden lighting is used and there is usually no music between the acts of a serious play.

Here is the list for 1929-30 :

1. Haydutlar, a translation of *The Robbers* of Schiller, done by Hassan Cemil, a rising author.

2. Nora (*Bebegin Evi*). This is a masterful rendering of Ibsen's *The Doll's House,* done by Holdun Zihni. The popularity of this frank and socially advanced play shows the way wind is blowing in modern Turkey.

3. Yaban Ordegi, *The Wild Duck* of Ibsen, very successfully translated by a woman dramatist Shezye Berin.

4. Katil, a translation of a well known work of the German dramatist Richard Voss (born 1858). This is a very powerful and thought-provoking play.

5. Kaes Arkasinda, *Behind the Trellis,* is a comedy in five acts by Mustapha Jelal dealing with the delicate subject of the happenings "behind the trellis" in the bad old days.

6. Hayvan, Fikri Yedi, that is, (freely rendered,) *Capable of Eating and of Thinking—yet Animals !* This is a serious "advanced" play by Vedat Nedim.

7. Tersine Akan Nehir, *Against the Current,* a serious play by Cevdet Kudret.

Among modern Turkish actors of note may be mentioned Erjument Bey, Hazim Bey, Galip Bey, Ertugral Muhsin Bey and Kemal Bey. Among the actresses Ney Neyir Hanim, Sheziye Hanim and Melahat Hanim may be noted. The least that could be said about these artistes is that they not only love and respect their art, but they love their people. It is this which inspires them to perform the daily miracle of transporting thousands of their countrymen and country-women from the realm of the mundane to that of the ideal. Indeed, the histrionic ability of these Turkish artistes compares favourably with masters of the craft in North Western Europe, as any one who has seen one of their performances at Istanbul will confidently affirm.

There is no doubt whatsoever that the work of the *Istanbul Seheremaneti Darulbedayi* is vitally affecting the life of the young Turkish Republic. How very vital this effect is only future can tell.*

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE BASIC CONCEPTION OF BUDDHISM:

Adhar Chandra Mookerjee Lectures, 1932. By Professor Vidhusekhar Bhattacharyya of Santiniketan. Published by the Calcutta University, 1934. Pp. x+103.

This book contains two lectures delivered by the learned Professor at the Calcutta University in 1932, the first forming the Introductory Chapter and the second dealing with the Main Problem. In this book the author attempts at first to give us a bird's-eye view of the religious and philosopical speculations in India that preceded the advent of the Buddha and then he tries to give his own idea of how the Buddha himself solved the problem before him, *viz.*, cessation of sufferings, by advocating the doctrine of *anātman*. The term *anātman* is really a difficult one, as it may be interpreted in various ways. It is not very easy to ascertain what kind of *ātman* was denied by the Buddha. The ultimate *tattva* or *satya* (truth) according to the Buddhists is *anātmā*. But the philosophical predecessors of the Buddha, specially of the Brahmanic school, held the view that it is only the realization of the ātman that leads to deliverance from misery. The Buddha, however, arrived at a different conclusion, because he failed to realize the existence of such an *ātman* or *jīva* which is eternal and absolute. He rather discovered that such a *jīva* could not be a *dravya-sat* (real thing), but it could only be a *prajnapti-sat* (a mere idea) and it was nothing but a unique combination of the five *skandhas* leading to consciousness as we experience in life. The Buddha not only denied *pudgala-nairātmya* (subjective nothingness) but also *dharma-nairātmya* (objective nothingness). So according to the Buddhists *Sunyatā* (voidness) was the ultimate reality (*dharmatā*). Hence *tathatā* (ultimate reality) and *Sunyatā* (voidness) are identical. This divergence from the formerly promulgated view of the previous philosophers may be regarded as a very bold and novel path discovered by the Buddha, along which the world should move for reaching its destination. The author of the book has very lucidly explained the Buddhistic view by means of apt quotations from various Buddhistic and non-Buddhistic texts. The whole book is an interesting reading from the beginning to the end. Even those who are not philosophy-minded will be able to understand easily the different view-points on the great problems of ultimate reality and the cessation of misery. Some will, however, wish the book should have been a little more scientifically written. The wreathing of the flowers of quotations rather appears here and there to be somewhat loose. But the importance of the publication cannot be minimized.

RADHAGOVINDA BASAK

THE PRINCIPLES AND PROBLEMS OF FEDERAL FINANCE:

By B. P. Adarkar, B.A., (Cantab). With a Foreword by Sir Cecil H. Kisch, C.B. Published by P. S. King and Son, Ltd., London. 12s. 6d. net.

Ever since the adoption of the federal basis by the First Round Table Conference for the future constitution of India, the problems of federalism have begun to attract the increasing attention of Indian students and scholars. The book under review is an instance in point.

Professor Adarkar has made a thorough study of the financial systems of the important federations and unions and has deduced from their working certain useful principles and conclusions. He has discussed the various complicated problems of the theory and practice—constitutional, legal, administrative, budgetary, economic—of federal finance, with full knowledge of facts and with great discernment and ability. He has shown firm grasp of essentials and has refused to be drawn into the discussion of irrelevant and minor issues. He has followed a rigorous method and his book is free from padding and looseness of thought and expression.

A number of distinguished economists had made important contributions to the subject of Public Finance but the special problems of federal finance had received very little attention at their hands.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The practical problems of finance in the various federal countries had no doubt been discussed but a comprehensive treatment of the principles and problems of Federal Finance as such had not been attempted before in the English language. This has now been done by Professor Adarkar—to use the words of Sir Cecil Kisch—"with conspicuous success".

Professor Adarkar divides his book into three parts. Part I deals with "Constitutional Foundations"; Part II describes the financial systems of leading federations, including those of the Union of South Africa and India; and Part III is headed "Principles and Problems". Parts I and II are introductory—they are done well. The only criticism I have to offer is, that a comparative treatment of the financial problems of various federations would have been more in accord with the plan of the book than separate descriptions of the financial systems of the leading federations.

Part III is the constructive portion of the book. In it Professor Adarkar begins by discussing the leading principles of Public Finance. He has done well to emphasize that "the main plank of public finance is the theory of transferences" and in supporting Wagner's "socio-political" theory against Seligman's more "fiscal" view of public finance. He is also right in pointing out that "there is not one ideal method or *optimum* for taxation and another for expenditure, but there is one single *optimum* for the whole scheme of public finance if any. The best way in which a given amount of money could be spent can only be devised when it is known what are the relative post taxation positions of the tax-payers. Similarly, the ideal manner of distributing the burden of taxation with respect to a particular revenue cannot be imagined so long as the distribution of the compensating element of expenditure among the tax-payers is not known, as there is always the possibility of the latter multifying the *optimum* of the former distribution." But from a practical standpoint it is also important to know separately the principles on which revenue is to be raised and public expenditure incurred. In discussing the principles and problems of Federal Finance Professor Adarkar has shown both scientific outlook and regard for practical considerations; but in his treatment he has been at places too brief. It is also a matter for regret that Mr. Adarkar was not able to extend the scope of the book to deal with the Indian financial problem more comprehensively than he has done in the brief section on India in Part II.

Nevertheless Professor Adarkar's "*The Principles and Problems of Federal Finance*" is a book of outstanding value and deserves to be read by all students of Public Finance and Federations.

GURMUKH N. SINGH

CARLYLE: *Emery Neff. Published by George Allen & Unwin Ltd., Museum Street, London. 10s. 6d. net.*

There is a marked tendency in modern times to profess hero-worship in all departments of life, and an attempt to interpret the life and writings of Thomas Carlyle whose favourite doctrine it was, is certainly welcome. The author has spared no pains in making the book as thorough as possible, visiting the places in England and Scotland connected with his work, and tapping all available resources where he could gain any new information on the subject, and putting down his materials in course of less than three hundred pages, in course of which he has described the life and struggles of Carlyle, the moods of his mind, his influence winding up the whole with an index, notes and bibliography, which will make the book an agreeable reading. Carlyle's message was lost on his contemporaries, the Victorians, but judging by his popularity on the Continent, specially in Italy and Germany, it is fairly reasonable to state that the world has learnt to its cost to value his message which will not be overlooked or neglected in the midst of post-War turmoils and national recriminations usual in the war-time. Mr. Neff has a grip on his subject, and he writes with discrimination.

PURDAH: THE STATUS OF INDIAN WOMEN. *F. Hauswrith (Mrs. S. Das). Kegan Paul. 10s. 6d. net.*

The question of Indian women and their present position had been pushed to the forefront by the notorious publication of Miss Mayo's *Mother India*: it was followed by a number of angry rejoinders like *Uncle Sam* and *Father India*, which were successful no doubt but which did not present a sober case for India's Womanhood. Mrs. Das's book presents historically the changes in the status of Indian women from the Vedic period up to modern times. She had been to India as the wife of a middle class Hindu graduate, and her stay in the country for eight years in intimate touch with Indian womenfolk in the different provinces and in difierent grades of society as one of them has made her fully qualified to be a representative of the class. Instead of throwing mud on other countries (and the United States of America in particular) she realizes the complexity of her problem and traces the position of Indian women from the freedom of the Vedic period till the abasement of present-day times, and ruthlessly exposes whatever social abuses she may have noticed. But while she judges, she shows sympathy and understanding. It is pleasant to come across a passage like this: "Though she stands today degraded, amidst clashing influences, old and new, from East and West, the Indian woman's fate and future, while stimulated by the recent influx of ideas and customs from the Occident, does not depend on that, but is deep-rooted, traceable, and predictable in the light of Indian history alone. More than in the case of any other people, the Indian woman's development has its roots in, is now feeling after, and will continue to express itself within, the currents of the ancient, exalted, religious and ethical conceptions of her race." (P. 13.)

There are a few obvious misprints, beside which it may be pointed out that 'Vidiasagara' (Iswarchandra Vidyasagar) did not belong to Madras (p. 193) but to Bengal, that 'Brahmacharya's are not the proper form for 'Brahmachari's (p. 212), that it is rather vague and wild to say that the Konarak temple is of 'Tantric origin' (p. 215), that the *Stree Bharata Mandal* (p. 221) is a wrong name for *Bharat Stree Mahamandal.*

RIALLARO: THE ARCHIPELAGO OF EXILES. *Godfrey Sweven. Second Edition. Oxford University Press, London. 7s. 6d. net.*

LIMANORA: *Godfrey Sweven. Second Edition. Oxford University Press, London. 7s. 6d. net.*

These books appeared originally in the fag-end of the nineteenth century, and it is curious that the second edition had not come out earlier, because its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

qualities are such as specially suit the age. The speculative interest in the future of man is bound to increase with the progress of Science, and the novelist, who appears under a pseudonym but who really is Mr. J. Macmillan Brown, sometime chancellor of the University of New Zealand, finds here an avenue for a criticism of the world as it is, where comedy and seriousness blend agreeably and there is the requisite strangeness to make the compound romantic and interesting. To describe some land "untainted by the vices of Europe" has been the author's aim and purpose and incidentally we are treated to a satiric vein condemning the polished and artificial ways of life that obtain in the present society, *e. g.*, where he says: "To tell the truth in clear and unambiguous language is the mark of barbarity." Another charateristic trait is the capacity for coining strangely sweet names, *e.g.*, Vulpia, Meddla, Kloriole, etc.

UP FROM POVERTY: *D. Spencer Hatch, B. Sc., M. Sc. in Agr., Ph. D. Directing Rural Demonstration, Travancore and Cochin District. Oxford University Press.*

Dr. Hatch has been connected with Rural Uplift work even since 1916 and the book contains the result of his experiences in the line. The word 'poverty' is here used in a comprehensive sense, and the integral value of its sense is emphasized again and again by the writer. His Excellency the Earl of Willingdon has contributed an introduction where the main obstacle to moral progress is stated to be "the psychology of the rural worker himself, owing to the custom and habit of caste and tradition that has governed his life and actions for generations." This seems to be an undue stressing of what no doubt is an "obstacle," what is remiss here is however remedied in the author's preface where the different disadvantages are named in detail against which the worker has to wage a grim fight.

The way out, Dr. Hatch remarks truly, is through 'self-help with intimate, expert counsel', and it is this 'intimate, expert counsel' which he sets forward to give, as best as he can, and as far as he knows from his experience of rural life in India. Co-operation is indispensable, but let it be co-operation in its unorganized forms, as too much organization wearies the workers and reduces his efficiency. Superior production and co-operative marketing arrangement necessarily go together and failure to see this has ruined many of the Indian Co-operative Societies. The subject of cottage vocations crops up here, and spinning, weaving and gardening come up for discussion. Mahatma Gandhi's advocacy of the *charkha* is criticized here as elsewhere and Dr. Hatch observes: "No one process can be a panacea for India's troubles." Such observation is due entirely to a wrong reading of the emphasis intended by Mahatmaji on an item of a practicable programme, specially when Mahatmaji intends the spinning wheel to be a symbol, rather than a mere device.

What has been recently stated by Mahatmaji (which Dr. Hatch had certainly no opportunity of knowing at the time of writing his book) regarding the efficacy of the All-India Spinner's Association is an eye-opener in this connection. The Association has been working in 5,000 villages and maintaining 2,20,000 spinners, 20,000 weavers and 20,000 carders, contributing to a 20 per cent increase in their annual income. The proposal mooted by Mahatmaji for an autonomous village industries' Board is also calculated to remove all possibilities of misapprehension regarding the exclusive nature of his programme.

Dr. Hatch gives an encouraging glimpse of the work that is being done in Travancore and Cochin District, specially through the Martandam demonstration, and it shows the soundness of Dr. Hatch's elementary principles, when he, instead of stopping with a mere account of his work, investigates the conditions of leadership—of the moving force that does the work; the result being a handy manual which deserves to be consulted carefully by all interested in village uplift work.

THE CROSS AND INDIAN THOUGHT: *V. Chakkarai, B. A., B. L. Christian Literature Society for India, Madras, Allahabad and Colombo. Price, Re. 1 4 As.*

The author seeks to establish Christianity on a solid basis by reviewing the implications of the Cross in the light of Indian Thought, and by reaffirming their affinities. What is the significance of salvation as Christianity understands it and how is it to be attained? And how to describe the state when it is attained? After discussing various theories of sin he comes to the subject of vicarious punishment and suffering, explaining the cross as a symbol of Christian mysticism; it is, to quote from the author, "the new world-order which, amidst the pain and joy of the world and man, will transform and transmute creation itself." The cross and the atonement are the central mystery of Christianity, which can be solved by a strenuous spiritual quest, rightly directed. The carefulness of the author is evident on every page.

PRIYARANJAN SEN

THE SAKTAS: *E. H. Payne, Y. M. C. A. Publishing House, 5 Russell Street, Calcutta. Pp. 139. Cloth Rs. 3-8. Paper Rs. 2-8.*

This book is the usual propaganda against Hinduism. It is openly militant and though Hinduism has never retaliated, the Rev. author says that his object is to '*combat*' Saktism. The writings and publications of Sir John Woodroffe have evidently caused a flutter of some magnitude. The author has not hesitated to stoop to the tactics of lawyers of a certain type who when they have got a bad case abuse the opponent's attorney. He says that Woodroffe's writings are unintelligible and badly written. Sir John Woodroffe was one of the great judges whose judgments were always terse and lucid and marked by unsurpassed judicial temparament. The writings which came under our author's notice also possess, for the average unbiassed mind, the same characteristics. It is Mr. Payne's misfortune that he finds them otherwise. The author has gone further and says, "The zeal of a convert often runs away with his judgement". If he implies that Woodroffe is a convert then he is grievously in error and his informant is anything but veracious. The statement of the witnesses cited to strengthen his case in his book would not stand cross-examination for five minutes. An American writer (Ewing) for instance is quoted to say that the Saradatilaka Tantra "deals almost entirely with spells and sorcery". This is absolutely wrong. It would occupy too much space to cite all the statement. The author evidently does not know Sanskrit and some of the translations cited by him show that the translators were not in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

touch with Indian thought and the translations are the products of mere lexicographic knowledge. The author seeks to make a scientific study of Saktism. He forgets that his own Faith would not stand any scientific examination but for a fair-minded seeker Saktism would. He could learn two things from this great religion without changing his own. The first is never to try to pervert a man's faith and the second is never to speak evil of the religious books of those who do not belong to one's own form of faith. In this book Mr. Payne is so very much trained by Sir John Woodroffe's writings that he has not hesitated to bring in a political significance into what he calls the Sakta *movement*. He attributes terrorism and everything else which is bad in the political movement to Saktism and quotes Lord Ronaldshay and some others to make out a case. None of these people know Sanskrit and understand what Saktism is and it is not a movement but something which belongs to the *soil* and can not be eradicated. The 'educated' Indian is neither a Sakta nor has he any belief in any of the phases of Hinduism. He is claimed by an old and experienced missionary to be the "foster child" of the Christian missionary in this country and if he is an anarchist then the foster parent is responsible.

ATAL B. GHOSH

THE ANNUAL MARKET REVIEW; 1933: *Published by Premchand Roychand and Sons, Bombay. 1934.*

This useful review is familiar to everyone interested in the money-market whether as a businessman or a student. Unfortunately it reached us too late to be of any use except for occasional reference. The most useful feature of the book is its long introduction where in course of forty-two most ably written pages we have a bird's-eye view of not only the most important financial events which took place in India during 1933 but also a good summary of the American situation and the World Economic Conference. Particularly useful is the summary of the provisions of the Reserve Bank Bill. After the introduction we have a more detailed survey of the money-market and the exchanges as also of the bullion and the share markets. A useful collection of statistical tables is also appended. For the sake of completeness it is suggested that the future editions should include an analysis of India's foreign trade and of the movement of the principal commodity prices, both in India and abroad.

SAILENDRA NATH SEN GUPTA

KRISHNAMURTI—*The Star Publishing Trust. Madras.*

This is a little pamphlet containing a series of talks on some religious, social and economic problems, by Krishnamurti, who has made the subjects as lucid as possible making one think that there must be a complete reorientation of thought regarding some of the above problems. He takes us with him to a higher and calmer atmosphere above the dust and heat of controversy, though one cannot help feeling while reading this pamphlet that some of his views on religion and after-life are going against the teachings of theosophy of the Adyar School.

BIBHUTI BHUSHAN BANERJI

TWELVE MEDITATIONS: *By Sri Kundakunda Acharya. Translated into English by Jaina Dharma Bhushana Dharma Devakara Brahmachari Sital Prasadji. Published by the Devendra Printing and Publishing Co., Ltd. G. T., Madras, with a preface by C. S. Mallinath.*

The author of the book, Sri Kundakunda Acharya, a Jaina philosopher and theologian, is said to have lived in the first century B.C. and A.D. The book is written in verses, the translator giving translations and explanations. We are bound to say for the sake of truth that both the translator and the preface writer seem to be carried away by the "great veneration" in which the author is held and the great antiquity of the book. Therefore they have not been able to pay much attention to the contents of the book. We do not say that there is nothing good and appreciable in it but its emphasis on other-worldly ideas makes it a misfit in the modern world. Its condemnation of the human body as impure, and of the domestic and social relations as so many impediments in the path of soul's liberation makes it an unwelcome intruder in the human society. The author's cosmology with hills in the lower universe, with the highest heaven as the abode of the liberated souls and the middle containing innumerable continents and occeans will not commend itself to even a school boy. The author's idea of social service is so poor that the highest meretorious act consists in "giving alms to the deserving religious persons", why? The translator explains "to help them in the performance of their austerities leading to liberation." Proper elimination should have been made before the book was published.

DHIRENDRANATH VEDANTAVAGIS

HOW TO EVOLVE A WHITE RACE: Vol. I. *By Sundaresa Iyer, Advocate, Madras, 1934. Pp. iii+116.*

The author thinks that the colour question can be solved if we succeed in evolving a white race all over the world by "scientific means". But so far as we know, the condition of the proletariat in Europe or America is only one shade better than that of the coloured races, so what good would it be even if we actually succeed in making the black races white, so long as Capitalism is there to exploit them all the time?

But apart from that question, the book amply proves how dangerous it is to leave Biology in the hands of those who merely read books and do no experiments and thereby never develop that sense of reality which is essential to the understanding of any of the biological sciences. It is time that professional biologists took up the task of popularizing their subject instead af allowing it to drift into the hand of amateurs.

THE TRAGEDY OF GANDHI: *By Glorney Bolton, George Allen & Unwin Ltd. London, 1934. Pp. 326.*

The book under review professes to be a dispassionate study of Mahatma Gandhi's life from an original standpoint. But from a careful perusal of the book it appears that the study is neither dispassionate nor original. Throughout the book, the author displays a strong bias for English culture against that of India, and that has turned him into an apologist for Britishers in India—as well as for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Europeans in general in Africa—rather than into an interpreter of Gandhi.

We miss in the present study all that Gandhi stands for on the positive side, his will to love human beings in spite of utmost provocation and frequent betrayals, his determination to build up a life of simplicity and mutual aid and teach people to defend it even at the cost of life. Instead of it, Gandhi appears on the stage bleating his gospel of pacifism, while, in person, he appears to be a queer sort of fellow stingy and wary at heart, delighting in antics of masochism, eager to take advantage of every opportunity of wielding power—in short, an unworthy person on whom the mantle of prophetship has accidentally descended. This reminds us strongly of a similar description of the prophet of Islam, of whom one European said that his religion was all very well, but the man himself was utterly unworthy of the task which had descended upon him!

The present interpreter of Gandhi could, at least, have done one thing besides reading the *Autobiography* and Mr. Andrew's books on Gandhi together with the delightful interpretations of India by Mr. Edward Thomson; he could have gone through the files of *Young India* or a few more of Mr. Gandhi's own books in the English language, before he ventured to interpret a movement which is so foreign to his own nature. That would, at least, have saved him from certain obvious mistakes as we shall presently see. Mr. Gandhi does not believe in preaching voluntary poverty to those who are suffering from involuntary poverty under British rule; otherwise, there would be no sense in his efforts to change the present regime in India or his persistent endeavour to restore cottage industries in the villages. He has, moreover, no love for suffering for its own sake. When suffering is not due to the vindication of one's rights or when self-suffering is not undertaken with the object of appealing to the heart of the oppressor with a view to his conversion —when it is not informed by love—has never hesitated to condemn it as untrue and, therefore, worthy only of cessation. Our author seems to be utterly ignorant of these phases of Gandhi's life and teachings, and that is why he sees in Gandhi only a tragedy of wrongly-appointed prophetship.

Mr. Gandhi's life may have to be written down as a failure so far as the success of his mission is concerned, for that has been the common fate of all prophets who have allowed their lives to be burnt by the fire of their love for humanity. But there is just one more touch of tragedy in it, that in spite of all his sufferings, the message of Gandhi's life has failed to wean, at least, one Englishman from self-conceit, clouded reason and superiority-complex, and that Englishman happens to be the Oxonian, Mr. Glorney Bolton.

NIRMAL KUMAR BOSE

THE RIDDLE OF THE WORLD: *By Sri Aurobindo.*

This book is the latest of Sri Aurobinda's contributions to the world regarding his philosophy of the universe. In these pages, although in a desultory way, an attempt has been made to solve the mystery as to the why, how, whence, and whereto of this world. There are side issues which are also dealt with in the book but the main problem remains to be the solution of the riddle—the source, the ultimate end, and developments in the intermediate stages of progress of the Universe.

It appears from the publisher's note that the book is not a systematic study of the problem—which is an age-long enquiry, *viz.* The Riddle of this World, but a mere collection of Sri Aurobinda's writings issued from time to time in dispelling the doubts raised either by his disciples or those interested in Yoga, or sometimes only comments on letters submitted from outside.

The arrangement does not seem to be happy. In vain one would attempt to find a method. It would have been much to the satisfaction of the readers if the arrangement was in accordance with the progressive development of the subject matter rather than with the historical accuracy.

The problem is not a new one, philosophers of different ages and climes offered various solutions, but the curiousity of the spiritual thinkers had never been satisfied. Each new school of thinkers made some departure from the previous schools either by elimination of old or by addition of new ideas.

Sri Aurobinda's solution of this problem or the riddle as he puts it, differs from that of others in that according to him liberation from the earth-consciousness is not the ultimate end. His solution offers a distinct achievement when after the liberation from the earth-consciousness he claims to bring down a divine transformation in this earth consctousness. Amongst the different planes of consciousness earth-consciousness comes to be the lowest while the truth-consciousness the highest. The last level has been described as the Supermind. What Aurobinda lays claim to is the possibility of bringing down the Supermental plan·s—the divine consciousness—and making it permanently fixed on the earth-consciousness, a state which even the Vedic Rishis did not or could not experience. Individually they might attain to that Supermind but perhaps they could not or did not infuse it into the earth. He has the boldness to say that what was not possible for the Vedic Rishis is possible in his system of Yoga.

SWAMI CHANDRESWARANANDA

A SURVEY OF THE MARKETING OF FRUIT IN POONA: *By D. R. Gadgil, M. A., M. Litt. (Cantab) and V. R. Gadgil, B. Ag. (Bom.) M. Sc. (Calif.). Published by Gokhale Institute of Politics and Economics. (Price Rs. 2-8). Pp. 184.*

Mr. D. R. Gadgil is a well-known writer on Indian Economics and the present work is a novel venture both for the subject it treats and for its manner of direct survey. In our Industries and Agriculture we have always neglected the marketing side of business allowing it to take care of itself; but distribution being as important as, if not more important than, production, our neglect in this respect has been responsible for over-production or mal-distribution even with regard to the monopoly products of the soil, with consequent stagnation and loss to our producers. The last Royal Agricultural Commission very rightly emphasized the need of such market surveys. We are glad to find that the Gokhale Institute of Politics and Economics undertook a survey of the Fruit Marketing in Poona which is an important centre for fruit and vegetable supply in western India and the work was entrusted to very able hands.

The study comprises the present methods and costs

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of sale and distribution of fruits with special reference to marketing machinery and the various stages through which they pass from—orchard to the consumer. The present work is not merely a collection of informations and statistics from official publications but is also the result of direct personal enquiry with the producers, wholesale-dealers, commission agents, retailers and others. The treatment of the subject is systematic and thorough with certain limitations due to ignorance and prejudice of the parties concerned. In view of the growing importance of the marketing problems and the absolute lack of interest of our producers, we commend this book as a pioneer work and wish that some of our scholars on this side of the country would turn their attention to the study of the marketing problems attending the local products. Jute is the golden fibre of our province and is a monopoly commodity but yet its producers are in a precarious condition to-day. Couldn't we expect a survey of the marketing of jute in Bengal by some of our scholars? We are sure if such a book came out, it would read like a romance with a tragic background.

ANATH GOPAL SEN

HAND BOOK OF GENERAL KNOWLEDGE: *By A. M. Mathews, M. A., Ed. Dip. (Oxon), A. C. P. (London), and M. C. Mohan, B.A., published by Careers, Moheni Road, Lahore. Price Rs. 2.*

This is a handy and useful compendium of information on topics of everyday interest and has been prepared specially with a view to meeting the requirements and demands of examining bodies and particularly for candidates preparing for the I. C. S., Sandhurst, Indian Police, and other Superior Examinations held by the Public Service Commission in India. But it also contains much that is of real value and interest to all teachers and students. The wide range of subjects covered, within such a small scope, does credit to the authors. Though there have crept up certain minor inaccuracies in the book which, we hope, will be rectified in the next edition, yet the important questions of the day have been judiciously chosen and dealt with in an exhaustive manner. We commend this book to everyone who wishes to be adequately posted in all that is going on in the spheres of activity of this country as well as the countries of the west.

SUKUMAR RANJAN DAS

SHABARA-BHUSHYA: *Translated into English: By Mahamohopadhyaya Ganganath Jha, M. A., late Vice-Chancellor, Allahabad University, published from Oriental Institute, Baroda. 1st Volume—pages 720. Price Rs. 16.*

The book contains the English translation of the first three adhyayas of Savara Bhasya, that of other adhyayas to appear later on. The text is not given along with it, nor even appended separately, probably under the idea that editions of the text portion only are availiable in Poona and Benares.

It is needless to say about the importance of the study of Mimamsa in the right understanding of the Vedic religion of India. As logic is an absolute necessity for the right understanding of all the Philosophical doctrines of different schools, so is Mimamsa for correct comprehension of the Vedas and the Vedanta philosophy especially; which is the real basis of Hindu religion and thought. It was the Mimamsaka Kumarila Bhatta, who vanquished the invincible Bhuddhist Philosophers of the seventh century, and it was he only who re-established the Vedic religion in this country at that time. None of the other Philosophical Schools could stand before the Bhuddhists and it was he who paved the way for Sankaracharya to popularize once more the Vedantic culture. The highly critical and analytical acumen of Kumarila got its impetuous impetus from the Shabara Bhashya on the Mimansa Darsana of Jaimini. The fine hair-spliting argumentation of that immortal Nabya Naya of Gangesha was, to a great extent, due to Mimansaka Pravakara, the unique exponent of Shabara Bhashya, the only available commentary on Mimamsa Darsana. To have a real and natural interpretation of the teachings inculcated in our scriptures, as well as in the writings of the ancient rishis and authors, Mimamsa perhaps is the only indispensable means for the purpose. It has ascertained no less than one thousand ways of interpreting any subject. Without going through the Shabara Bhashya with its commentaries no sound scholarship can be acquired in our Philosophy.

This invaluable treasure of our ancestors was so long a sealed book to the public for its antiquated style and technicalities, but is now made accessible to the English knowing public through the munificence of Maharaja Gaikwar of Baroda and the untiring labour of the old venerable man Dr. Ganganath Jha. The translation is unquestionably literal and faithful, as it comes out of the pen of one, who is perhaps the only scholar well versed in both Eastern and Western Philosophies. This old veteran translator has been assisted by his favourite disciple Pandit Kestresha Chandra Chattopadhyaya, M.A., of Allahabad University, who has already earned a name for his research work. This has no doubt enhanced the value of the book in various ways so far as the editing is concerned.

In conlusion, may I suggest to the learned and venerable Pandit Jha, that he would render a real service to his country, if he also issues a Hindi translation of this important work.

RAJENDRANATH GHOSE

CONGRESS PRESIDENTIAL ADDRESSES: *Second series. From 1911 to 1933. G. A. Natesan and Co., Madras. Rs. 4. Crown 8 vo. Pp. 914+18 Cloth.*

Messrs. G. A. Natesan and Co., Madras, have done well to bring out a new volume of Congress Presidential Addresses (Price Rupeess Four only). A similar book was published by them many years ago. The Second Series, which is now published, contains the Presidential Addresses from 1911 to 1933. Needless to say that the twenty-four years it covers have been years of momentous changes in the history of the country: and the presidential addresses delivered from the chair of the Indian National Congress serve not merely as a periodic review of the conditions, year after year, but as a running commentary on the administration. The volume opens with Pandit Bishan Narayan Dar's address to the Calcutta Congress, and includes the pronouncements of such leaders as Lord Sinha, Babu Ambica Charan Mazumdar, Pandit Madan Mohan Malaviya, and Mr. C. Vijayaraghava Chari, Dr. Besant and Mrs. Sarojini Naidu, Moulana Mahomed Ali and Dr. Ansari, Pandit Motilal Nehru, Pandit Jawaharlal and Sardar Vallabhai Patel and many others.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Publishers also announce that the First Series will shortly follow. As these volumes are likely to serve as authentic books of reference, advantage has been taken of the issue of the two volumes to supply a comprehensive and exhaustive index to each volume. They will be useful to journalists and other publicists and all students of Indian politics in general.

C.

DR. BESANT AND INDIA'S RELIGIOUS REVIVAL: *By Hirendra Nath Datta. Adyar Pamphlet No. 182. Theosophical Publishing House, Adyar, Madras.*

This is an address delivered at the Theosophical Society Convention of 1933. It gives a vivid account of Dr. Besant's religious activities in India. Even her activities in connection with social reform were, so we are told, definitely religious and in these matters "Dr. Besant was moved to action by the order of Risi Agastya, the Regent Risi of India". (P. 22).

DR. BESANT: WARRIOR: *By G. S. Arundale. Adyar Pamphlet No. 183. Theosophical Publishing House, Adyar, Madras.*

This is another lecture on Dr. Besant dealing with another aspect of her character. The story has been nicely told.

DR. BESANT AS A COMRADE AND A LEADER: *By Sir C. P. Ramaswami Aiyar. Adyar Pamphlet No. 186. Theosophical Publishing House, Adyar, Madras.*

Here the story of Dr. Besant's life is briefly but vividly told by one who is not a professed Theosophist. Dr. Besant's greatness can be gauged from the simple fact that even those who did not accept her as their spiritual leader, could not resist the influence of her magic personality.

U. C. BHATTACHARJEE

SANSKRIT

APASTAMBADHARMASUTRAMANJARI: (*A Digest of Apastamba Dharma Sutra*). *By R. N. Suryanarayana, M. A., Maharaja's College, Mysore. (Brahmarshi Gurukulam Series No. I).*

This is quite an interesting little publication. "The *Sutras* [of Apastamba] pertaining to a single subject, but scattered here and there, are all collected and grouped under proper headings in order to present the ideas of the great sage *Apastamba* in the form of paragraphs... The *manjari* is quite faithful to the original. But some words ..have been added wherever necessary to make the sense and context quite clear." Thus within a small compass of about 80 pages one will have the opportunity of getting familiar with the important topics dealt with in one of the oldest and most important works that throw light on the social history of Ancient India. Some of the technical details of procedure which have been retained could as well be cut down and the size of the book further reduced. A brief synopsis of the contents in English and a reference under the sutras to the chapter and verse of the original as also to the changes introduced would have been highly welcome. The glossary which is appended to the work and explains, in general, the more important and peculiar words occuring in the text will be found useful to the readers. We hope the learned compiler will follow up this work with similar digests of some other works of this type.

CHINTAHARAN CHAKRAVARTI

GUJARATI

RAJA CHHABILARAM BAHADUR: *By Manshankar Pitambardas Mehta. Published in the Sayaji Sahitya Mala, Baroda. Cloth bound: illustrated. Pp. 339. Price Re. 1-14.* (*1933*).

The Visalnagarā Nagar Brahmins claim that this famous Mogul officer belonged to their caste, the Vadnagara Nagars claim him as of their caste. His biographer makes him out to belong to the latter caste. He flourished (A. D. 1665-1719) during the decline of the Moguls, in the reign of Farrukh-Siyar and was instrumental in getting the Jaziya tax removed and thus getting relief for the Hindus of the Empire. In writing this biography Mr. Manshankar has consulted all available material, and produced a work which is very interesting and full of information. He has used discrimination in the selection of the sources on which he has relied and thereby the book becomes valuable.

JYOTI REKHA, *by Sundarji G. Betai, printed at the Narayan Printing Press, Ahmedabad. Illustrated Cover: Thick Card board. Pp. 45+18. Price Re. 1.* (*1934*).

This is a collection of fine Five (5) Khand Kavyas by a very promising young poet. Its introduction is written by Prof. Narsinhrao B. Divatia, who has very carefully brought out all its good points, specially the graceful way in which he has treated of such appealing topics as the Dream of Siddhartha, the Lochandan of Sulochana, and the disappearance into the sea of the golden Dwarika. That the poems disclose the fact that there is great potentiality of better work in this early stage of Mr. Betai's craftsmanship, no one can dispute, and we extend him our cordial congratulations.

(1) A. S. KUMARI, (2) GHAR DIVDI, *both written by Yashwant S. Pandya, (1) Printed at Navchetan, 10 Pollock Street, Calcutta, (2) at Suryaprakash Press, Ahmedabad. Paper Covers. Pp. 204: 85. Price Re 1: Annas 8: Illustrated.*

Both these are plays, and they bear on social subjects. There is a sort of latent humour and imperceptible satire in them: both so blended that one likes to go through them from cover to cover before putting them down. Those who have read Mr. Pandya's other and characteristic works are struck by the facility with which he can change from one subject to another without sacrificing ability and efficiency.

THE WATERS OF DESTINY

By SITA DEVI

XVII

THIS job at Mysore had been offered to Sudarshan long ago. But as he was loath to leave Delhi just then, he had not, till then, accepted it finally. Now he wrote definitely accepting the offer, and began to make arrangements for going away. He hesitated to the last to leave his old and invalid father alone, but the old man himself began to press him to join his post without delay and brought over a widowed sister of his from his village home, to look after him.

Before going away, Sudarshan wanted to see Suparnā alone once, but he could not decide whether it would be right. Things were not at all clear to him. She had never told him plainly that she did not love him. Yet she was trying with all her might to thrust him away from her. What could be the meaning of this? If her heart was not inclined towards him, where was the harm in owning it up? Sudarshan was not unworthy of her. If she had no love for him, she could tell him that plainly. Uncertainty gives birth to more unhappiness than anything else in this world. But Sudarshan could not but notice that his presence moved her very much. The poor young man could not decide whether it would be right to disturb her again for his own sake.

But Suparnā decided everything for him. He received a letter in the morning, which bore his name and address, written in a beautiful and feminine hand. Undoubtedly it had come from Suparnā. Sudarshan was not very familiar with her handwriting, still an inner voice seemed to whisper to him, that the letter had come from her. His strong hand trembled with excitement when he opened it. Suparnā had written:

"I hear from uncle that you are soon going away from here to join your new post. I, too, am going away to-morrow to Calcutta, with Amitā's aunt. It is not certain yet, whether I shall ever return to Delhi again. I am but a plaything now in the hand of fate. I do not know where I shall go, nor what is going to become of me. My heart is eager to tell you everything, to make a full confession, but I cannot. Please forget me, that is my last request to you. Perhaps I shall never again meet you in this world. This thought lends me courage to say what I have said. Otherwise, even this would have remained unspoken. I would have considered myself the most fortunate woman on earth, had it been in my power to accept what you offered me. But I have not the right so much as to think about it even. I cannot tell you why. Please accept my *Namaskar*.

Yours faithfully
Suparnā."

Sudarshan stood still for a while with the letter clasped in his hand. His frowning face betrayed the struggle and indecision in his heart. Why was Suparnā creating this veil of mystery? Could not he tear it asunder by force? He was going away the next day. There was no more time. He locked up the letter in his desk and began to pace the room restlessly.

Taran Babu and Amit had come to the station to see off Suparnā and Taran Babu's sister. The train was not crowded, and they got enough accommodation. As there were very few passengers, they were in no hurry to get in. They put in the luggage and stood talking on the platform. Suparnā was looking very grave and pale. A couple of days' illness had changed her appearance completely.

"You should go away for a change of air to some hill station or other, instead of going to Calcutta," Taran Babu was saying. "But let's hear what your father says about it. This is what is wrong with our girls. They never know when to cry halt Education is all right, but you must not neglect your health for that."

"What do you mean, father?" cried out Amitā. "Am I not also studying? But have you ever noticed me to be ill for a day? If Su neglects eating, drinking and sleeping, it is not the fault of education, but the fault of herself."

"But medical students are very hard put to it, you must admit that," said Amitā's aunt.

Just at that moment, Amitā pinched Suparnā hard and whispered, "Look, who is coming".

Suparnā looked up and saw Sudarshan advancing rapidly towards them. Her face became paler than before. Her legs began to tremble, and she sat down rather suddenly on a bench that stood near by.

"Why, what has happened to you again, Su?" asked Amitā rather alarmed. "I am feeling dizzy," replied Suparnā faintly.

Amitā also sat down by her. "Why are you torturing yourself and another innocent person needlessly?" She asked. "What prevents you from speaking plainly?"

Suparnā clasped her arm and cried out hoarsely, "Stop, stop, don't make me give myself away before people. Let me go away with tearless eyes at least."

Amitā was struck dumb with amazement. She had never seen such a thing before. She had no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more doubts in her heart about Suparnā's love for Sudarshan. Everything seemed to point out this fact to her. And Sudarshan's love for Suparnā had become known to one and all. Then why was Suparnā trying to hide it and torturing herself and Sudarshan? Amitā wanted to give Suparnā a good shaking and thus make her see reason.

By this time Sudarshan had arrived by their side. "I was afraid, I might be too late,' he said to Taran Babu. "Father became so unwell in the morning, that I was held up by his side for an hour."

"What has happened to him ?" asked Taran Babu.

"My aunt has arrived from the village," said Sudarshan. "So his meals have become much more elaborate. He is an old man, and could not bear this change well."

"Are you starting for Mysore in a day or two ?" called out Amitā from the bench. "It would have been better, if you too had started today. We could have seen you off too. That would have meant killing two birds with one stone.'

Sudarshan turned to them and said, "We, poor wretches, are never seen off by anyone else, except the porters at the station." Then he looked full at Suparnā and said, 'You are not looking at all well. Have you again been ill ?

"No," said Suparnā in an indistinct whisper.

"No, indeed," cried out Amitā in protest. "Did not you feel giddy just now, when you sat down ?"

"Then you should never have undertaken such a long journey," said Sudarshan rather alarmed.

"She could hardly change her plans at the last moment," said Amitā. "She never complained, while at home, of being unwell."

"Well, there is no help for it now," said Sudarshan. "But you must get into your compartment now and lie down. Otherwise, you might find it full, and then you will have to sit throughout the whole journey."

Suparnā got up in a hurry. Amitā too, got into the compartment with her and began to prepare a bed for Suparnā. "Lie down here," she said, "and cover yourself up to the head. If anyone asks you to get up, say that you have got pox. That would settle everything and no one will dare to approach you again."

Suparnā laid herself down. Sudarshan came and stood by her. "Do not get up again on any account," he said, "but continue like this."

Taran Babu also hurried up. "What is the matter ?" he asked anxiously. "Is she again unwell ?"

"No, no," said Sudarshan. "She is feeling rather weak, so I have told her to rest awhile."

Taran Babu moved off and began to talk to his sister. A certain wealthy young man had just returned from England and the brother and sister wanted to secure him for Amitā.

Amitā got down from the compartment on a made-up pretext, in order to leave Sudarshan alone with Suparnā for a few moments. Sudarshan began to arrange the ladies' luggage more conveniently and said in a low voice, "I have received your letter. But I did not understand anything clearly from it. There is no more time for me to understand. I had much to say to you in reply, but for that too, there is no time. Only let me tell you this, that I shall never forget, and I shall cherish hope to the last. Wherever I happen to be, I shall hurry to your side, if you deign to call me. There is no more time, there goes the bell. Good-bye !"

Suparnā looked at him, with eyes full of tears. Amitā and Taran Babu came in once more to take their leave. Amitā's aunt too came in with her sons. Taran Babu misunderstood the tears in Suparnā's eyes and patted her on the back consolingly, saying "You are a foolish little woman, my dear. You are coming back within a few days, so why are you crying ?"

"There is time yet, if you want to undo the mischief, you have done," whispered Amitā.

But Suparnā did not reply. Amitā and her father got down hurriedly from the train as the last bell went. The train gave a jolt, then began to move forward slowly. Sudarshan paced along by its side, holding on to the window of the compartment in which Suparnā was. "I have written my address on this card," said he, giving a card to Suparnā. "I have secured your address too, from Miss Amitā. May I write to you occasionally ?"

Suparnā sat up on the bench. Tears were still streaming from her eyes. "No, don't write," she said hoarsely. "Forget me, that is my last prayer to you."

Sudarshan bit his lips, and released his hold on the window. The train steamed noisily out of the platform.

"Why not come with us, Sudarshan ?" said Taran Babu. "There is plenty of room in the car now."

Sudarshan was standing there, very silent and preoccupied. "Very well," he said and turned to them.

They came out of the platform all together. "You let her off too easily," whispered Amitā to him.

Sudarshan smiled sadly and said, "The obstacles were not of a nature that could be tackled by me."

"If you have to back away from every obstacle you meet, you will never do anything in this world," said Amitā.

"There is such a thing as fate, above all," said Sudarshan. "Man's will and prowess cannot achieve everything."

As soon as the train left Delhi station behind Suparnā flung herself down on her bed again. "You have really become very weak, my dear," said Amitā's aunt. "I did not know it before,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

else I would never have dared to take you along with me. I wish I could see the end of this journey soon."

"Don't be anxious about me please," said Suparnā. "I shall be all right. I am not ill, only a little weak. Had anything really been the matter with me, I would not have dared myself to come."

"If you feel well enough to stand the journey, then I do not mind," said the aunt. "Since you are going to become a doctor and look after the health of other people, you should learn to take care of your own health first. I hope you have sent a wire to your father?"

"Yes", said Suparn . "I sent it yesterday."

The train rushed along. Passengers got in, and they got out, but Suparnā never noticed anything. She did not even notice the stations, where the trains stopped. Before this, these things always used to interest her so much. She used to devour the whole distance with her eyes. She would not even sleep, lest she should miss some part of the way. She wanted to see and know as much of the world as she could. She had planned to tour the whole of India and thus satisfy the cravings of her heart to the full, after the completion of her studies. Even her fellow passengers were objects of interest to her. She did not know whence they came, and where they went. Their lives touched hers, only for a few moments. Her imagination used to follow these strangers throughout their journey. But this time her mind had become dry and barren like a desert. She did not want to look at the world or at the faces of her fellow men. Everything was too horrible. What was the use, then, of looking at anything? She looked out only once, like a convict sentenced to life-long imprisonment, taking leave of the fair world outside. Then she turned round and closed her eyes.

She never knew how the day and the night passed. There were very few passengers. So Suparnā did not have to suffer from any inconvenience. She only had a cup of tea and another cup of cocoa during the long journey. Nothing could induce her to take anything else. Many of the lady passengers enquired of Amitā's aunt, what the poor girl was suffering from. The good lady did not know much of Hindi, yet she replied as best as she could. If Suparnā had been in a normal mood, she would have found much cause for merriment. But she had no ear for anything now, she only wanted to pass the time somehow. She looked and looked at her watch, till her eyes ached.

Even at night she could not sleep. The monotonous sound of the carriage wheels sounded like a dirge in her ears. The memory of that day, long ago, when she had first come to Delhi, came back vividly to her mind. With what hope, what joy, and what a sense of wild freedom, had she commenced that journey! She was convinced that she was leaving behind the life of a prisoner for ever. But the wheel of fate had turned, and she was being led back perhaps to that selfsame prison.

She had known the joys of a free existence now, could she again live the life of a slave? Her whole body shuddered at the very thought. She could not murder her inner self, like this. Her father had asked her to decide for herself, but he did not know, how very knotty the problem was. Suparnā had changed entirely, body, mind and soul. She could no longer be merged into that old Subarna, the wife of that tyrant Shribilas. Subarna was dead, dead completely, nothing of her now lived in Suparnā. Was Suparnā to be strangled to death now, so that Subarna might live again? But even if Suparnā died, could the memory she cherished die also? Who would gain by it, if Suparnā died now, and an apparition walked about on the earth, calling herself Subarna? Still must she die?

The long journey ended somehow, at last. The uproar of the Howrah Station reached Suparnā's ears and made her sit up. Amitā's aunt leaned out of the window and said, "There is your father, Suparnā. Thank God, the wire reached him in good time."

Suparnā got down from the train. Her face looked like that of a stone image.

XVIII

Pratulchandra had long ago left the boarding house, with which we are familiar, and had been living in a small house by himself, all these years. Suparnā had visited him twice or thrice, during this period. He had rented this house mainly for her. She had grown up into young womanhood and it was unseemly to bring her over to a men's boarding house. Besides, everyone at the old establishment knew Suparnā's past history. Pratul did not want to have Suparnā's feelings hurt, by any inadvertent allusion to her past.

Suparnā accompanied her father to this new house. He had always kept a room for her, furnished suitably. The furniture were covered over thickly with dust, though Pratul had ordered the servant to prepare the room for her coming. He had, of course, swept the floor of the room, but as neither he nor his ancestors had ever heard of dusting furniture, he had left the things untouched.

As Suparnā entered the dust-laden room, her bitter mind felt even more bitter. How can a human being live inside this room? "Please call your servant, father," she said in a tired voice, "this room is impossible."

Pratul smiled and called the servant. The poor man was obliged to dust the furniture and cleanse the cobwebs on the wall, thus rendering the clean floor dusty again. He had perforce to sweep it all over. Then Suparnā ordered him out of the room again, and after arranging

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all her things, she changed and went to have tea with her father.

"You are not taking anything at all," said Pratul. "And you are looking none too well. Why did you put further strain on yourself by undertaking such a long journey? I wrote to you that I was going over next month."

"I could not endure Delhi for a moment longer, father," said Suparnā. "So I had to come away even in this state of my health. I want to finish all this muddle, once for all. I cannot hide, all my life, like an escaped convict. If I cannot live like a free human being, I need not live at all. I am thoroughly sick of this existence." Her voice choked on the last words.

Though Pratul did not understand all her words fully, yet he understood well that she was suffering terribly. He felt for her very deeply. "You are quite right, my dear," he said, 'a person cannot attain the fulfilment of life in any way, if he or she has to flee before a nameless fear all the time. It is better to see things to a finish, be it good or bad. I shall try to help you to the best of my power, but you know how limited man's power is. As Shribilas has the law on his side, he can cause you a good deal of annoyance. But I don't know whether he intends to do that. From his looks and words, he did not seem to be a finished scoundrel. But it is impossible to say how he will turn out when put to the test. If desperately cornered, he might turn out to be a very rough customer."

"That is very likely, father," said Suparnā, "You do not know him, but unfortunately, I know him only too well. A man does not change very much after he is twenty-one."

"That's true," said her father. "But still, one can never tell. He really feared his mother like the very devil. And it was she who tortured you more than he ever did."

Suparnā's face turned red in anger. "That is not a fact, father," she said. "He did all he could to torture me. But most of the time, he was absent in Calcutta. When I think of those times, I can scarcely call him human. To call him an animal is to insult the animals."

"It is no use exciting yourself about past history, now," said her father. "It was fated that you should suffer, else why should your mother fall into such a foolish way of thinking? Now, calm yourself and try to decide what you should do. Shribilas is here, he lives only a short distance away. If he knows that you are here, he will be sure to come in the evening. You can then talk things over with him."

Suparnā remained silent for a while. Then she said, "All right, father, you may inform him about my arrival. Let this be ended, soon." She left the table and went away to her own room. Pratul wrote a note to Shribilas and sent a servant over with it. Suparnā had no wish to eat or drink that day. She bolted herself inside her room and remained there the whole afternoon. Her brain seemed to be on fire. Her mind was full of the deepest hatred and loathing for Shribilas. How was she going to extricate herself from the clutches of this inhuman beast? A few fools had played with her young life long ago. So was her whole existence to become a drama of despair and futility? Shribilas could not drag her away by main force, but he could render her whole life barren as a desert. He was casting his black shadow over her young life, and robbing it of all joy and hope. By degrees, her anger turned into deep pain, and hiding her head in her pillow, she wept tears of agony. Poor exile from an unforgettable paradise, she could never again enter that land. She had only been admitted there once, through mistake. When pain becomes past suffering, one becomes angry with the whole world. Suparnā began to feel angry with Pratul even. Why did he bring her away from that life of suffering? It was not pity but cruelty. Why should a person sentenced to life-long imprisonment be allowed one glimpse of a free life? It only succeeds in making the subsequent darkness more horrible. If she was destined to be sacrified on the altar of social custom, why did her father try to rouse her to a sense of real womanhood? She was fast becoming a clod, he should have left her there to that fate.

The afternoon passed away somehow. Suparnā had to get up and calm herself somehow. She had to meet Shribilas now, and try to get the better of him in verbal warfare. She must not submit to unjust social laws, she must not be carried off her feet by fear or sweet words.

She finished her evening toilette and came out. She was used to wearing white all the time, but her dress always gave evidence of her love for fine things and of her good taste. But today she was getting ready for a fight. She brushed her hair back severely from her forehead and tied it in a tight knot behind. She took off all her bangles from her wrists, leaving only one. She wore the cheapest and plainest *sari* she had and a blouse with full sleeves. Pratul looked at his daughter and became graver than before.

Father and daughter sat down to tea. "Are you going to offer Shribilas tea?" asked Pratul. "In that case we must order some sweetmeats."

"No need, father," said Suparnā roughly. "When a person who should have been near and dear, turns into a foe, he becomes far worse than a stranger. He goes out of the social pale. You need not observe any social rules with him. He must never be allowed to think that he is still regarded as one of the family."

"You must first see him and hear what he has to say. If you grow angry beforehand, you will never be able to do justice to him."

Suparnā bit her lips and became silent. After a while she said, "Father, it is very difficult for me, not to get angry, when I think of him. Not only did he torture me during

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

childhood, but is now trying to perpetrate worse infamy."

Tea was finished. The servant removed the things. Suparnā got up and said, "Father, I am going to have a walk on the terrace. When he comes, please inform me."

"All right," said her father. He turned to the servant and said, "A gentleman will call soon. Show him to the drawing-room and inform me." He retired to his own room and began to read Amiel's Journal.

Shribilas came much before his time. He was feeling very much excited, as he knocked at the front door. He did not look up, otherwise he would have seen a pair of large eyes, full of hatred and scorn, gazing down at him. Suparnā's eyes travelled over his immaculate and foppish dress, and her fair face became distorted with scorn. Pratul had informed him of Suparnā's arrival. He had come prepared to have a face to face talk with Suparnā.

The servant received him as ordered, and went in to inform his master. Shribilas began to feel a certain hostile element in the atmosphere, which he had not felt on his previous visits. He smiled and thought, "That is due to my lady's instructions, I suppose. She must be very angry. It will take much cajoling to bring her round." Then his thoughts turned to another direction. He was going to see his wife after thirteen years. He wondered what she looked like now. She was extremely pretty at the time of his marriage to her. Afterwards, she lost her looks somewhat, owing to systematic neglect of herself, and constant fighting and bickering. She had a nasty temper even as a child, and was a good match for Shribilas's late lamented mother, the most notable virago of the village. Shribilas wondered whether her temper was as bad now. She was the only child of a rich man and an educated lady. She was a prospective lady doctor too. So it was extremely unlikely that he would find her a mild and obedient type. He was ready for a certain amount of hostility. Suparnā had a right to show off some temper, being a rich man's daughter.

Pratul entered the room with a grave face. Shribilas got up in a hurry and bowed down to him. Pratul was not very observant by nature. Still he too noticed that Shribilas was got up very finely today. Pratul had expected better manners from an educated man. He could imagine well the reaction of this silly foppery upon Suparnā's mind.

He asked Shribilas to sit down and drew up a chair for himself. Shribilas was at a loss for words. Pratul thought for a minute or two, then began to speak. "I have already told you whatever I had to say," he said. "I have not said anything to Suparnā, either for you or against you. She has now become a full-grown woman. She has been well educated, and she is quite capable of knowing her own mind and of judging for herself. If she agrees to go to you now, of her free will, I will not oppose it. But if she is not willing, she must not be coerced. Whatever be the law, know this for certain,"

Shribilas had as vile a temper now as he had in his early youth. The tone of Pratul's words began to make him angry, but being a lawyer he controlled himself. He knew that if he got angry now, he would lose his case. So he said in a calm voice, "I have no intention of coercing her, Sir, I shall try my best to persuade her to come with me willingly."

"Very well," said Pratul, getting up. "Wait here, I shall send her in to you. I shall be in the next room so that you might talk quite candidly to each other. If you need me, you may call me."

Pratul Chandra went out. Shribilas laughed to himself and thought, "He is quite willing. Otherwise he would never have given me such opportunities. Now it all depends on the state of my lady's temper."

After a few minutes, Suparnā entered the room with firm steps. Shribilas got up with a start. He did not realize for a few moments that it was really Suparnā. It was a completely different woman, who stood in front of him. She did not bear the slightest resemblance to Subarna, whom he remembered. But, almost immediately he knew, that it was Suparnā. He was dreaming of a lovely fairy-like creature all this while, when this austere nun-like figure entered, shattering his dream to pieces. But even in this severe garb, how wonderfully beautiful she was. He began to feel ashamed of his fine dress now.

As Suparnā approached him, he sat down again. He must say something to her, but he did not know what to say. "Sit down Subarna, I hope you are all right," he said at last rather foolishly.

The name Subarna stung Suparnā like a scorpion's sting. Everyone had forgotten Subarna, except this person. He wanted to drag back poor, tortured Subarna here, from the dead past. Could she not prevent him by some means or other? She was wondering at her own calmness in his hated presence. She was not feeling excited in the least. She was like a spectator, looking at the drama of life of another person. She sat down and answered, "I am all right, thank you."

Shribilas collected his thoughts in a few minutes and began, "You must have heard from your father, why I am here. My mother is dead. My sister is, of course, in the house now, but she too contemplates going away to Baneres very soon. I did not arrange to bring you back to me, all this while, not because, I did not want it, but because I saw no way to do it. If I took you back, you would have had to live in the same house with mother, which would not have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

suited you at all. She had become old, so I could not do anything against her wish. I have begun to practise as a lawyer here, but I do not earn enough to set up an establishment here. But now that mother is dead, there is nothing to prevent you from living in my village home. My sister will know how to behave."

Suparnā felt an irresistible impulse to laugh outright Shribilas was taking it quite for granted that Suparnā was going back with him. It only needed to settle where she was to live. His words sounded innocent enough, but they did not ring sincere at all. He seemed to be repeating words, that he had got by heart. He did not dare to say what he really felt. Suparnā's hatred and distrust of him increased tenfold. Human beings fear a wolf but if it appears in a lamb's skin, it becomes an object of mirth also. Suparnā knew Shribilas and his sister only too well. Circumstances had changed indeed, but people's natures could not change so easily.

"It does not suit me to go at all," said Suparnā at last.

Shribilas seemed to be surprised beyond measure. He raised his eyebrows and asked, 'Why ?"

"That question should be asked by me, more properly," said Suparnā "Why should I go ?"

Shribilas thought for a moment, then replied, "It is the custom all the world over, from time immemorial. Married people always live together. Otherwise the world will soon come to an end."

"But am I really married to you ?" asked Suparnā. "A child's play was enacted in my childhood. I did not understand a word of it and I did not utter one word of the *mantras* myself. Taking advantage of this silly and meaningless ceremony, you have tortured me and oppressed me as much as you desired. I have managed to free myself somehow and have come to understand what freedom means in a human life. I have chosen my path, and I shall stick to it. You drove me away once with insults. That was final. I am not going again to you. I have chosen my career also. My only request to you is this, don't pester me any more."

Shribilas's temper had risen considerably, but he did not dare to show it. If he tried coercion from the first, he was sure to fail. He must try to persuade her and plead with her first. He knew that he could no longer employ force against her, as he had done in her childhood. He did not want to do it. But about one thing he was determined, he must get her back. She was the only child of a rich father, and was going to inherit everything. Keeping this in mind, Shribilas had never married again, though he had lived a life of dissipation. He believed fully that a Hindu woman's real place was at the feet of her husband, not on his head. He did not believe in the modern foolishness of treating woman as equals of men, even though they were educated. But he knew that, due to adverse circumstances, Suparnā was no longer in his power. To get her back once again meant a lot of trouble in many directions. His father-in-law too was not a good man ; he would never help Shribilas. He would rather let his daughter go astray, than send her back to her husband. Shribilas did not believe that educated women, especially lady doctors, could ever keep their character. He must rescue her somehow.

In answer to Suparnā's words, he said, "You have received good education, yet you speak unreasonable words. All Hindu girls are married in the same way, as you were. They never choose their husbands themselves. But do they cease to be husbands and wives, for all that ? The law recognizes their union, so does society. You were married at the age of eight, after that you spent five years under my roof as my wife. Still do you mean to say that our marriage was no marriage at all ?"

"Yes, I do mean to say it," said Suparnā. "A ceremony in which I had no choice, no voice, no option, does not mean anything to me. Legally, of course, you may call me married. Our Hindu law is such that even if the husband is a tiger or a snake, the girl has no means of escape from it But the law can at worst punish me, it cannot force me to live as your wife."

Shribilas had not thought that matters would arrive at such a pass. He was not prepared for such determined opposition. He had thought that Suparnā would shed tears or use abusive words, that would be about all. But this was a real declaration of war.

"You are speaking in anger," he said, "and not trying to see beneath the surface. You are justified in being angry, I do not deny that. You did not live a happy life in our home. I myself was a mere boy then, and could not say a word for you. But now things have changed. You shall be the mistress of the household, your word shall be law. My sister is prepared to go away to Benares, after she has seen you settled at home. Then why do you object ?"

Suparnā smiled bitterly. "I object," she said, "because I can never give you the love and respect due to a husband. It is impossible for me to live as your wife"

"You think it impossible now, but your mind may change afterwards," said Shribilas. "Love and respect grow gradually, from living together. Love at first sight is nonsense. You confine it only in English novels. We have no use for it."

"I don't want to live with you," said Suparnā. "I have no intention of staying on here indefinitely, absenting myself from the college. I shall leave for Delhi very soon. I came here simply to settle matters once for all, with you. You know my mind now. I hope you will not pester me again."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Shribilas was not going to give up so easily. He now tried to rouse her pity, and became quite sentimental. "I shall never give up hope till the end of my life," he said. "If I could do so, why have I not married again, all these years? My mother had told me again and again to marry."

Suparnā's lips bore the trace of a smile again. She repressed it and said. "You may marry with a clean conscience. That would be the best arrangement."

"I am the best judge of that," said Shribilas. "Do you think, you can live alone, like this, all your days? No woman can ever do that, be she as educated and free, as you like. You cannot marry again, as Hindu law does not sanction divorce. What are you going to do?"

"That's my business," said Suparnā. Shribilas got up and said, "I shall come again, day after tomorrow. I give you these two days to think things over again."

(To be continued.)

ARCHÆOLOGICAL EXCAVATION IN INDIA BY FOREIGNERS, AND INDIA'S NEEDS

By "INDIA FIRST"

OUR leaders and politicians are so very busy with the strictly political and economic questions that the cultural side of our national life is very sadly neglected by them. No one seems to understand the implications of the various measures proposed and passed from time to time, no one gives a thought to their ultimate effect on the intellectual life of the country. Decisions which adversely affect the interests of India as a people are allowed to pass unchallenged. Certain recent measures in connection with archæological excavation work in India are a case in point.

All civilized governments look upon the proper study and preservation of the archæological antiquities of the country as a most important duty. It was owing to the enlightened interest of the late Lord Curzon when he was Viceroy and Governor-General that the Archæological Survey of India was instituted as a department of the Government of India. For the last thirty years, this inconspicuous but none the less useful branch of public service has done service of inestimable value in unearthing the records of the past by excavation, and in preserving the ancient monuments of India, which are among our greatest heritages from the past. The department has given us back Taxila and Nalanda, Sarnath and Paharpur, Sravasti and Kusinagara, Bhita and Mahasthan, and scores of other centres of culture in ancient India; it has preserved for humanity Sanchi and Ajanta, Ellora and Mahabalipuram, the Taj Mahal and the Gol Gumbaz; and it has opened up new vistas in the earliest history of India by giving us Mohen-jo-Daro and Harappa, Adittanallur and Nal. It trained a band of European and Indian scholars in excavation and field-work, who have raised high the fame of India in antiquarian research—men like Sir John Marshall, Drs. Vogel and Spooner, and Messrs. D. R. Bhandarkar, R. D. Banerji, Dayaram Sahni, Ramaprasad Chanda and others.

The sum allotted to the Department has been so far meagre, and it just enabled it to carry on its essential work somehow. Officers of the Department continued excavations in some of the most important sites, and their labours were made known to the world in monographs. The epigraphical records also continued to be studied and published—and there was ample co-operation from outside scholars in this matter. But from the Great War onwards the cry was 'economy' and 'still more economy'; it meant greater and greater curtailment of the Department's activities, so that at the present moment its most important work is at a standstill.

The Government will not spend any money on excavation work, although scores of most important sites which have in their bosom the secrets of India's past are crying for attention. Its responsibilities in this matter are passed on to others, and on terms and conditions which are sure to make the Indian people great losers. Foreign learned bodies, from the different countries of Europe, from America, and possibly also from Japan in the not distant future will be allowed to do excavation work at suitable sites. The conditions held out for them, which have been approved by the Indian Government, are remarkably liberal. The antiquities discovered by excavation work are to be liberally allowed to be taken away by the foreign explorers, as the Government of India thinks that these foreign explorers should get an adequate return for the money spent by them. Thanks to this beautiful arrangement by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

the Indian Government, we shall be selling our birthright for a mess of pottage.

Of the countries interesting or important archæologically, there are Italy, Greece, Turkey, Syria, Palestine, Iraq, Persia, Afghanistan, Chinese Turkistan, Egypt, India, Indo-China, Java and China, and Mexico, Central America, Peru and Bolivia. Of these, Italy does not allow any foreign group to do any excavation work ; and Indo-China and Java being under the French and the Dutch respectively, these two powers do the necessary archæological work there, and there is no scope for any other foreign nationals to work there. With Italy, it is a matter of conscious pride with which they do their excavation work, and they now jealously guard their antiquarian treasures. France and Holland have done archæological work most efficiently and have conserved the antiquities of Indo-China and Indonesia in a most admirable manner: and for this we in India have reason to feel grateful to them, for they have given back to the world the Greater India of Indo-China and Indonesia. The other countries—Greece, Turkey, Iraq, Persia, Afghanistan, China, and Egypt, as well as Mexico and the other American countries, have allowed one or more foreign bodies—French, English, German, Italian and American—to do archæological excavation work. **Of these, while Iraq, Persia and Egypt and Mexico have been particularly careful in the matter of the conditions under which foreign institutions are allowed to work, Greece and Turkey do not allow any antiquities to go out of the country.**

Even in mandated territories like Syria and Palestine, which, being under the administrative control of the French and the British respectively, are more liberal in their Antiquities Laws than independent or semi-independent nations, the right of the Government to claim all objects required for the scientific completeness of the museums of the country or for the illustration of art and history is unequivocally safeguarded.

The Government of India, on the other hand, in throwing open for the first time the field of exploration to outsiders, seem more anxious to allay the fears of foreign financiers of archaeological expeditions than to ensure the development of the national collections in the country.

We are to remember that the foreign nationals coming to do archæological excavation work in Indian soil do not find themselves, unlike the earlier group of archæological workers in Egypt, Greece, Turkey and elsewhere, among a people whose intellectual or educated classes do not understand or do not care for the antiquities and past history of their country. It was possible, perhaps allowable, to take away antiquities from Egypt and Turkey, and Greece, as well as Central Asia, in those days as neither did the Turkish and the Chinese Governments care, nor was there any indigenous study of the antiquities of their land among the Arabs of Egypt and Syria, Palestine and Iraq, and among the Greeks, and the Turki people of Central Asia ; and there were ignorance and fanaticism which took pleasure in destroying what was not understood. But in India the question is entirely different. There is native Indian scholarship, and there is native Indian pride in the ancient history and culture of India. Merely because the Government has not the money, we should not issue a *carte blanche* to foreign nationals. We should be at least as strict as Greece, Turkey and Egypt.

The tendency everywhere is—to prohibit the foreign excavators from taking away any antiquity discovered in the course of their labours unless they are strict duplicates, and are allowed to be taken away by a national board of antiquarians and historians. The question of the expenses incurred by these foreign bodies is quite beside the point. The objects found are national heirlooms, and they must be treated as such, and except for strict duplicates, they must remain with the nation.

The foreign group, of course, has the prior right of publication on their discoveries and on their finds, and that in itself is or ought to be, the main reward.

The task of making a proper selection and equitable distribution of antiquities and the granting of permits for export of antiquities is in all countries assigned to the head of the Antiquities or Archæology Department, who is in some countries assisted by an Archæological Advisory Board, on which the principal cultural and antiquarian interests of the land are represented. For a country of the size of India, it would certainly be more essential to have a similar Board than to entrust on a single individual the sole responsibility on such vital matters as the retention and export of national heirlooms. In Siam, for instance, not a single object of ancient art and craft is permitted to leave the country unless it is inspected and allowed to be done so by the Archæological Department of the country which affixes its seal on the article, to be inspected at the frontier.

It is understood that an oriental society from America have got permission to excavate a site near Mohen-jo-Daro. We should be circumspect from now. Countries like Iraq and Egypt, Mexico and Peru were careless in the matter as there were no indigenous scholarship to take charge of these things. Now they are taking to these studies and they are tightening up the screw: no more free field for foreign excavators. There

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are Indological Institutions in plenty in India, and it should be considered their work primarily to excavate the old sites. Money must be found for that.

The conditions under which foreign institutions are to be allowed licences to excavate in the soil of India should not be more lenient than those under which Greece, Egypt and other lands allow such excavations.

In the interests of India, the following conditions should be rigidly insisted upon :

(1) All excavation work should be controlled by the Government of India directly. A competent and well-qualified official of the Indian Government must be always present at the site where foreign excavators are working. This official will check all the work when in progress and keep an inventory of all finds. This is done in Greece and some other countries.

(2) Objects found by excavation are not to be taken out of the country. Only duplicates, approved by a Board of Experts consisting of Representatives of the Archæological Survey and the Universities and select Antiquarian and Historical Societies, can be taken away by the foreign bodies undertaking excavation work. The foreign excavating body will have the right to publish first the result of their work together with representations of the objects, but this must be done within a stated time, say, two years.

(3) A small number of junior officials or probationers nominated and deputed by the Archæological Survey of India (in consultation with the Universities, if necessary) are to be given every facility for training in excavation work in the sites where foreign institutes are doing archæological excavation. Such junior officials or probationers are to be treated as scholars and officials, and their pay or stipends are to be paid from Indian sources, either from government or from other bodies, such as the Universities, Research Societies, etc.

Further, the Government should encourage the various Universities to undertake with the help of their professors and scholars archæological work at select sites, a thing which is done in other countries, Egypt included.

Indigenous Societies should always receive preference from the Government in the matter of licences for excavation—this is the declared policy of the Government. But mere preference will not do. There is to be active encouragement and support, and even inducement. In India, there will be no lack of workers, there are plentiful first-rate scholars in history, and professors of ancient Indian history should be induced to take up the work of excavation as a part of their training.

All the above points are vital. The importance of the 1st and the 2nd points are apparent. Because we cannot find the money now, we need not barter away our most precious national heritage for all time to come. Actual personal observation or watching from a responsible officer will be necessary, to prevent as far as possible unwarranted removal of antiquities. The 3rd point is also exceedingly important for the future of Indian scholarship and trained field-work in archæology. **The Government has curtailed all excavation work. Foreign learned bodies will now increasingly take the place of the Government in this matter. If these do not afford Indian scholars opportunity for field-work and practical training, it will mean that in a decade or so there will not be a single Indian within the Archaeological Survey or outside it who will be able to claim any training or active participation in excavation and field work.**

This is something which all those who have a vision of India's growing requirements in learning and science cannot view with equanimity.

Of late the Government of India has neglected the training of young Indian scholars as practical field archæologists. With the exception of a few scholars like Mr. K. N. Dikshit, Mr. M. S. Vats and Mr. N. G. Majumdar, the Department has no other practical field-workers, and there is none in training. Mr. H. Hargreaves, when he was Director-General of Archæology, appointed four young Indian scholars as archæological apprentices—Messrs. K. G. Goswami, L. Narasimhachari, M. Rahim and S. S. Sarkar. They were actually learning excavation work in various sites. It is be regretted that Rai Bahadur Dayaram Sahni, when he came to office in 1931 as Director-General, dismissed these young scholars on grounds of economy. **The result has been that since then, no Indian scholar is getting any training for field-work in the future.**

And this will mean that for years and years to come, until some new arrangement is made to train Indians in the line, excellent work, such as that done by Mr. N. G. Majumdar in exploring some twenty previously unknown pre-historic sites of Sindh (which forms the subject of a recently published monograph), will be beyond the scope of Indian scholarship, although the country is full of such pre-historic and historic sites.

It is not yet too late. We urge upon the Government to weigh the objections to its present decision with regard to the very liberal terms, explicit and implicit, granted to foreign bodies doing excavation work, objections which have been noted above. Will not our Assembly Members be a little wide-awake, and bring about the proper legislative remedy ?

DR. TARAKNATH DAS IN WASHINGTON

By J. T. SUNDERLAND

I think readers of *The Modern Review* will be glad to learn that Dr. Taraknath Das has been assigned an important position in the Faculty of Washington University, in our national capital city.

Dr. Taraknath Das, A. M., Ph. D., Lecturer on Oriental Politics, Department of Politics, Washington University, Washington, D. C.
This picture was taken in the University campus while Dr. Das was out from his class-room.

Dr. Das came to this country from India as a student, and has carried on his studies in two or three of our universities, obtaining the degrees of B. A., and Ph. D. He has written much for periodicals in America, Germany, Japan and India, and is the author of three valuable books, namely, "Sovereign Rights of Indian Princes", "Ideals of Rabindranath Tagore" and "Great Britain in World Politics",—the latter published in the German language as well as in English.

During the past three or four years he has travelled and studied in Germany, France and Italy, where he has done much to secure the establishment of scholarships in the universities of those countries for Indian students; and in other ways to promote cultural relations between the people of Germany, Italy and France and the people of India.

Dr. Das has now returned with his family to America, where he expects again to make his residence. His Chair in the Faculty of Washington University is that of Lecturer on Oriental Politics,—a position which will enable him to exert much influence in university circles, and also much with national officials and the general public.

I have before me as I write reports of two public lectures recently delivered by him. *The Washington Herald* says of him editorially, "Our Washington University has designated Professor Taraknath Das, a man of wide practical and theoretical experience in world affairs, to be instructor in Far Eastern affairs. The choice is an excellent one." *The Washington Daily News* says of Dr. Das's appointment: "If the United States is interested in the Open Door in China and Manchukuo, it is equally interested in the Open Door in India. Dr. Das says, Indian Nationalists are against imperial preference, and want all nations treated on a basis of equality in Indian commerce. India should have her own representatives in Washington, just as Ireland and Canada have."

There are few Indian scholars and thinkers

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in America or Europe who are doing so much for their country,—to make known her great past, the value of her civilization and culture and the justice of her struggle for freedom —as Dr. Taraknath Das.

October 20, 1934.

AN INDIAN EXPERT IN COLOURED WOOD-CUT PRINTING

IT is now nearly thirty-five years since the Modern School of Indian Art was founded by Abanindranath Tagore. After the school had been at work for more than a decade, it was felt that printing for the purpose of reproduction of the happiest specimens of art was very much needed. The first attempts at such reproduction were made through halftone printing, which, however, in those days was too crude to retain any of the strength and delicacy of the original paintings. The meagre value of such executions from the artistic point of view set the pioneers to look beyond the eastern seas for the reproduction of paintings. It was increasingly being realized that the art of printing should be developed in India. Four years back Mr. Biswarup Bose of Santiniketan, the son of Mr. Nandalal Bose, was sent on to Japan with the express object of learning artistic coloured wood-cut printing (chromoxylograph). He has now returned to India after having completed his course of training under the eminent artists of Japan.

A word now about the nature and course of training which Mr. Bose has gone through. The Kokka Publishing Company is well known throughout the world for the distinct contribution it has made to art by elevating coloured wood-cut printing to a level of excellence. Mr. Bose was attached to this institution for three years. He studied during his stay in Japan the arts of wood-cut and colour painting and the result has been splendid. The artist has to be congratulated on his achievement.

Coloured wood-cut printing is a process involving three distinct hands—the designer or the artist, the engraver or wood-cutter and the printer. Mr. Bose has done well in combining in himself all the three persons involved in completing the cycle of the designer, the block-cutter and the printer. He is conversant with the technique and the skill of all the three. The artist under whom Mr. Bose had the privilege of working is J. Murayama. He was also trained by U. Hirachka in modern wood-cutting. So far as designing is concerned Mr. Bose had the singular honour of coming into contact with no less an artist than Arai Kampo, who took a kindly interest in him.

Besides, there are certain other crafts which are not in any way connected with wood-cut printing, which he has taken great pains to learn. Brushmaking is important inasmuch as the excellence of the painting depends very much on the quality of the brush, which Japan has improved to a very high degree, and India does not supply good brushes. Picture-mounting is no less important as much of the beauty of paintings is lost owing to the inartistic and crude mounting of them. S. Ihachi has taught him brushmaking and I. Khato picture mounting. The system of Japanese roll-mounting (Kakemono) has a great future in India inasmuch as the artists and art-lovers find it very easy and convenient by this means to preserve paintings in a very good condition.

Mr. Biswarup Bose

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This last circumstance brings us right into the significance and importance of coloured wood-cut printing in India. The original paintings of the eminent artists of modern India are too expensive for the general run of admirers to possess. Reproductions which by their artistic qualities retain the rare effects of the originals are certainly a great boon to the nation. Art, moreover, confined to the appreciation and possession of the few, can never have that character of universality and inspiration about it which alone can make it a power, making for the highest realization of self. Art, confined to a few, is destined to wither and decay.

Advertisers from :—a reproduction by Mr. Biswarup Bose

In view of these considerations Mr. Bose, with the help of his father Mr. Nandalal Bose, has decided to organize a school of training on the lines in which he has himself been trained. The centre of his activities is at present Santiniketan where, in an atmosphere of artistic creations, he has already been working quietly ever since he came back in September, 1933. He has already turned out two important prints, one of Mr. Abanindranath Tagore and the other of Mr. Nandalal Bose. His programme of work will consist in taking in a number of students at Santiniketan and seeing them through a definite course. It is expected that students of art will not miss the opportunity of availing themselves of this new development in the line of art, which is so full of possibilities.

COMMENTS AND CRITICISM

"Bengali Quotations in Nagri Type"

THE EDITOR, *The Modern Review*

Sir,

Allow me to lodge my humble but none the less strong protest against your discarding the Bengali in favour of the Debnagri script in printing Bengali words in the articles in *The Modern Review*, while the *Prabasi*, also owned and edited by you, is printed, and properly so, in Bengali characters. I do not know if the majority of the readers of *The Modern Review* are more familiar with the Debnagri than with the Bengali alphabet; it is not likely, I suppose.

In the article "An Aspect of Mahatma Gandhi's Greatness" in the November issue of *The Modern Review* the quotations from Chaitanya Charitamrita, Maddhyalila and Chaitanya Bhagabat, Adikanda are printed in Debnagri, but the names of the two books as well as of Bhagabat Puran are transliterated and printed in Italics. If the names of the Bengali books can be transliterated why not the quotations from them? And transliteration, to be intelligible to those not knowing how written Bengali words are actually pronounced, must be phonetic.

I may add that in the article the Bengali letter CHA is transliterated by CH in some places and by C in others.

136 Cornwallis St., Calcutta.
18-11-34.

B. Ganguli

EDITOR'S NOTE : The quotations referred to were given in Nagari types as non-Bengali Indian readers of *The Modern Review* exceed Bengali readers in number. But it is admitted that transliteration in Roman script would have been convenient to *all* readers of this journal, Indian and non-Indian, as they all know this script.—*Ed.*, M. R.

Did Firdausi Write a Poem on Yusuf & Zuleikha ?

Mr. Mam Chand Sandilya writes :

"In the last sentence of your note on Firdausi you say he was also the author of Yusuf and Zuleikha. This is incorrect."

In reply we refer the writer to Chambers's Encyclopædia, new edition, 1924, vol. iv, p. 658, article Firdausi, where it is written : "He was the first, apparently, to compose a poem on the wife of Potiphar and Joseph, under the title of *Yusuf u Zulaykha*, a subject which has been a great favourite with many later poets, Turkish as well as Persian."

In the Encyclopædia Britannica, 11th edition, also, vol. x, p. 398, article Firdausi, it is stated :

"Firdousi composed another poem of 9000 couplets on the theme borrowed from the Koran of the loves of Joseph and Potiphar's wife—*Yusuf and Zulerkha*. This poem, though rare and little known, is still in existence—the Royal Asiatic Society possessing a copy."—*Editor*, M. R.

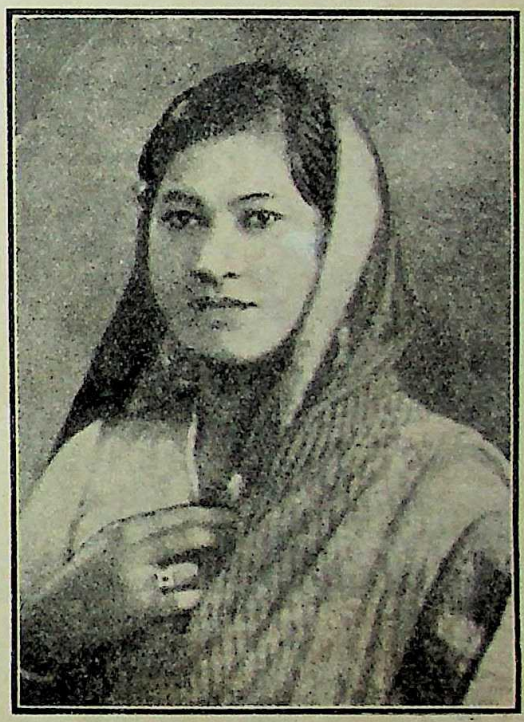
alth Union in Bijapur, a member of the orking committee of the Karnatak Teachers ssociation, and also a member of the orking committee of the All-India Teachers ssociation.

Rani Phulkunwari of Sherkot presided over the eighth annual session of the Oudh Women's Conference, held at Lucknow, recently.



Rani Phulkunwari of Sherkot

A few months back a group of twenty women students and teachers went on an educational tour in Europe. Their programme was almost complete with all its sight-seeing, pleasure trips, visits to university centres and other diverse places ranging the League of Nations Headquarters to the Vatican, from Oberammergan and the Passion Play to Stratford-on-Avon, from Versailles to the slums of London. In its social aspect the tour included interviews with world-famous personages like the Pope and Signor Mussolini.

The group toured in Italy for over a fortnight. They have said on their return that the priceless treasures of art in her churches and museums transported them to a land of dreams as it were—so great was their spell. Of their interview with Mussolini they have said :

"He spoke to us in English, not very fluently but extremely cordially, said he had made some study of India's great past, of her philosophy and thought and of her wonderful civilization. To-day he was watching with close interest her progress and aspirations. He had had an

The Indian lady students received by Mussolini

opportunity of meeting Indian students at the Oriental Students' Conference in Rome last Christmas, and now he was very pleased to welcome a party of Indian women to his country.

"A short informal response was made to his speech. Meanwhile the photographer in the corner was ready with his camera focussed, so Signor Mussolini asked, 'Is it your wish that you make a photograph with me?' and laughed heartily at the chorus of 'Yes' and 'Most certainly.' He seemed to enjoy having the girls push about to group around him. That photograph will remain one of the cherished souvenirs of our tour."

From the 19th to the 26th of October last there was held in the Bombay Town Hall a Women's Swadeshi Exhibition of Fine Arts and Handicrafts, organized by the Gujerati Stree Sahakari Mandal. Mrs. Hansa Mehta, the chairman of the Art Committee of this body, writes in her foreword to the Catalogue of the Exhibition:

"Women are by nature artists and good craftsmen. So far they have flirted with arts and taken only amateurish interest in them. It is time women realized that arts and crafts can also be a good means of earning their liveli-

LONDON LETTER :

Parliament and India, Up And Up And Up, Government Defeats, Conservative Municipal Defeats, Labour's Municipal Triumphs, Warning, What We Should Do, The Loom of Youth, What the Official Figures Show, The Same Disease In Other Countries, Britain's Similar Plight, The Lie of Over-population

From Major D. GRAHAM POLE

Parliament and India

PARLIAMENT met at the end of October after a three months' summer recess, and is to be prorogued at the end of next week. The Government is finding difficulty in getting all its work through in the time, and one imagines that it would have been better to cut a fortnight off the summer holidays rather than waste so much time on futile all-night sittings.

Even the House of Lords is becoming democratized by the presence of Labour peers. Their sittings are frequently more or less formal only lasting a few minutes and seldom more than two or three hours. This week however the Lords had a 12-hour sitting and their House did not rise till after 4 a. m.—a record for them.

The new session of Parliament will be opened by the King on 20th November when the chief business will be the Bill for India's new constitution. The Report of the Joint Select Committee should be presented to Parliament and published simultaneously in India about 21st November. But Mr. Baldwin promised that there would be no discussion of this Report in Parliament until it had been considered by the Tory Party Organization. This comes strangely from a Party that has constantly twitted the Parliamentary Labour Party with "dictation" from the Trades Union Congress.

The Council of the National Union of Conservative and Unionist Associations meets on December 4th to hear Mr. Baldwin and to discuss the India Joint Select Committee's Report. It is expected that this meeting will last most of the day. On the same evening Mr. Baldwin is to address a political school for Conservatives on India. This school is part of the organization of the Conservative Central Office in preparation for the next General Election.

As I have said before, one can expect little from the Report of the Joint Select Committee. It is possible to predict further that their Report, from the point of view of India, will be even more reactionary than the Government's White Paper that they have had under consideration for the best part of two years.

The Government of India Bill cannot now be introduced into the House of Commons before next year, and it is doubtful whether it will reach the House of Lords in time for them to begin consideration of it before the autumn of 1935. As plans are at present laid, it is intended to have a General Election in this country certainly not more than a month or two after this Bill has been passed into law.

Up and Up and Up

Politicians have a way of coining unfortunate phrases that are apt to be used against them for a long time afterwards. Mr. Asquith's "Wait and See" is not yet forgotten. And our present Prime Minister, at a luncheon last week at which it was expected he would sketch in some detail the Government's policy and intentions, had nothing more definite to say than that the Government intended to go "on and on and on and up and up and up." Guy Fawkes day is just over and Guy Fawkes ought to be honoured by the present Prime Minister as one who endeavoured to send the Government of his day "up and up and up" ! That inimitable cartoonist, **Low**, published a cartoon in the London Press showing the Prime Minister, Mr. Baldwin, and Sir John Simon, in an aeroplane ready to go up and up and up. But the trouble was, as **Low** pointed out, that the machine had not got started yet.

Government Defeats

Members of the Government who are in office seem to have formed themselves into a Mutual Admiration Society and are so busy extolling to one another the virtues of the "National" Government that they do not seem to realize that these virtues do not exist outside of their own imaginations. The parliamentary by-elections are going against them. They lost two seats to Labour during last month—at Swindon and North Lambeth. In the latter constituency the Labour candidate won the seat with the highest Labour vote ever polled in that constituency. For every two votes caste for the "National" Government candidate, 11 votes were recorded against him. At Swindon there was a heavy poll. The Government put up a Rugby football international as their candidate. The electors were appealed to separately by Mr.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ramsay MacDonald, Mr. Baldwin and Sir John Simon to return their candidate. And instead they sent back the Labour nominee, Dr. Christopher Addison. It is now being conceded that instead of its present 58 or 59 M. Ps. Labour may have 260 representatives in the next Parliament. If Labour opponents are willing to admit that figure, the probability is that it will be considerably exceeded.

Conservative Municipal Defeats

But it is not merely in parliamentary elections that the Conservatives are being badly beaten. The results of the recent municipal elections are nothing less than a rout of the Government's supporters. Labour now holds more municipal seats than ever before in history. By the spring of this year the electors had had an opportunity of seeing what so-called "National" Government really meant. In the London County Council elections in March Labour had a net gain of 34 seats and for the first time secured a majority in the Council At the same time, in the other County Council elections, Labour had a net gain of 112 seats and lost only 28.

Labour's Municipal Triumphs

At the Borough Council elections last week Labour gained over 750 seats in London and the Provinces. There are now Labour majorities in 20 County Boroughs, 17 non-County Boroughs, and 15 London Boroughs—which all looks as if the National Government instead of going on and on and on will go out and out and out.

The Scottish elections take place about a week later than the English ones. But there again the results are no less emphatic.

In Glasgow, Labour, with six gains, has now a clear majority of 14 on the Town Council. Motherwell, with three gains, has now its first Labour Town Council. Dundee records four gains for Labour, Aberdeen three, and Edinburgh one. In all Labour gained 36 seats in Scotland and gained absolute majorities in eight more towns.

The only people who do not see the significance of these results are the members of the so-called National Government.

Warning

In the hour of triumph wise men have always looked for portents of defeat. And it is well that in this moment of triumph in the local elections we should be careful of all that this new responsibility throws upon us as a Party. Labour's appeal to the electors in these local elections has contained many promises the fulfilment of which is bound to increase the rates. If within the next eighteen months as a result of the fulfilment of pledges Labour Councils send up the rate charges all over the country, then the National Government will have something with which to scare the country at a General Election. It would be a tactical blunder of the first magnitude if the Labour forces in the local authorities do not make the best of the situation that now faces them. A rise in rates is inevitable; and this, if not faced, will give the Tory Party and the so-called "Nationals" all they want in order to impeach Labour Governments.

What We Should Do

There should be an immediate National Conference called of all the Rating Authorities and the problem of rates should be the one subject for discussion. The Labour Councils should demand an entire change in the rating system—the extinction of this present system which levies rates upon the houses of the people and upon the improvements in every city. Instead, we should substitute a system of rating of the values of land.

With Labour's power now entrenched in local authorities, such a resolution could easily be carried. The next step is for the Labour Councils to promote immediately on the conclusion of this Conference a Bill calling for parliamentary powers to derate all houses and improvements and impose the local levies on the values of land created by the community.

I have no hesitation in saying that such a move would have the support of thousands outside the ranks of the Labour Party.

No doubt this Government might refuse to pass this Bill into law. In that event Labour can impeach the present Government with having refused to bring in such a change as would have relieved the dead weight of increased rates on all local authorities. It would place the Labour Party in an advantageous tactical position at the forthcoming General Election and place the Government in an invidious situation.

This cannot be too strongly emphasized, for clearly it is the purpose of the present administration to make the fullest use of the rating question and what they will be pleased to term "Socialist prodigality" at the next General Election.

The Labour Councillors would be well advised to discuss these propositions and to come to some conclusions as to immediate action.

The Loom of Youth

The most pathetic part of the present economic problem is the outlook for young boys and girls. The whole tendency of modern invention is to intensify production and at the same time to eliminate, as far as possible, the necessity of the human labour factor. This would be a great blessing if the enormous wealth produced by modern invention was justly diffused through the whole community. It would mean increasing the hours of leisure and reducing to a minimum

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the necessary hours of labour. But under our present system the fruits of science and art are turned to the profit-making of the few, with no regard whatever to the spiritual and economic well-being of the greater part of human society.

The opportunities for the rising generation to find employment are becoming ever more and more restricted. And, added to that, machinery and invention are taking the place of the old crafts which necessitated the craft training that did so much to build the mind and character of the artisans.

This means that such opportunities as are open for our boys and girls to find employment are to be found in blind alley occupations, occupations in which no craft is to be mastered and no technical skill is acquired.

Other elements of the present economic problem of poverty are perhaps more menacing to men and women. But this particular problem of unemployed youth is at once the most tragic and most destructive that faces the country.

What the Official Figures Show

Take the figures in answer to a question in the House of Commons on the 1st November, 1934. The Minister of Labour, Mr. Oliver Stanley, stated that on the 24th September 1934, the latest date for which figures are available, there were 65,339 unemployed boys and 51,446 unemployed girls between 14 and 18 years of age registered at the Unemployment Exchange and Juvenile Unemployment Bureaus in Great Britain.

How any Government can calmly accept these figures and accept the situation as inevitable exposes to the full light of day the incompetence and futility of modern statesmanship.

In the *Times* of Tuesday, 6th November, there is a glowing account of the great development that is taking place in Germany as the result of opening up agricultural colleges and new land colonies for the training of youth. The remarkable change in the physique and technical adaptability of these youug people has given the greatest satisfaction to those who are responsible for this innovation. But here in Great Britain we are hoping that opportunities will open for this increasing army of young people to be absorbed in industry. And at the same time the Government is pursuing a policy of restriction of production in order to keep up prices!

The Minister of Labour is looking for jobs for the unemployed while Mr. Runciman and Mr. Walter Elliot are doing everything they can to check new opportunities from being created. Were it not for the tragedy involved in these political manoeuvres one might be tempted to use them as the basis of the greatest pantomime ever written.

The Same Disease in Other Countries

Bankrupt statesmanship is characteristic of every country in the world. We have heard the apologists for Japan stating that her expansion in Manchuria and Korea is necessary in order to absorb her great population. But what are the facts?

For 250 years prior to 1850 the population of Japan remained constant at about 6,000,000. Since then it has grown to 65,000,000. From these figures it is argued that expansion is necessary. But modern teachnique in agriculture and industry has greatly increased the productivity of the earth and the people and moreover greater density of population increases productive efficiency, as Henry George pointed out long ago.

Dr. Nitobe states that Japan has still 4,000,000 acres in Hokkaido where 2,000,000 more could be settled and 3,000,000 more acres of land in the interior of the island for a million more people.

These lands are not developed for reasons which are obvious. Japan, like Britain, is hoping for a greater expansion on her purely industrial side. She is leaving her internal resources undeveloped and thus causing unemployment. At the same time she is expanding on to new territories at the risk of international war, under the plea that her pressure of population makes it absolutely necessary so to act.

Britain's Similar Plight

Seeking new territory will end in nothing but war and trouble. Other countries do not want immigrants. Mr. Stanley Baldwin, in 1925, appealed to Canada and Australia to solve our over-population problem by accepting 2,000,000 unemployed Englishmen as immigrants. The next day the Canadian Minister of Labour told Mr. Baldwin that he was sorry England had a population problem but that Canada had one also. Immediately after this pronouncement the Canadian Trades and Labour Congress supported the Minister's declaration by saying: "The fact that the Labour Department Records show a surplus of coal miners already in Canada should definitely give the quietus to those who seek to exploit the misery of British miners by trying to induce them to emigrate to Canada."

The Lie of Over-population

The statement that Japan and Canada are over-populated is just as true as when it is made with regard to Great Britain. We know that millions of acres of land in this country produce no wealth and thousands of them are retained for sports and estate display. We further know that if the land of England alone was opened up so that men could produce their own food, build their own houses, and make those things which generally gratify human desires, there need not be one unemployed man in the country.

Unemployment is due to causes which are inherent in every country and no manipulation of external relationships will solve this internal problem. Over-population is a lie and exploited by the vested interests in every country. But it is the success of this lie which leads one nation after another into the vortex of armaments, nationalist policies, and tariffs. And this finally can only lead to War.

8th November, 1934.

FOREIGN PERIODICALS

Censorship

H. J. Whittick, Editor of *The Wolverhampton Express and Star*, in his presidential address at the conference of the Institute of Journalists, quoted in part in *The Inquirer*, London, says:

To know that two-thirds of the world's people are under the iron rule of censorship must arouse in this free country the gravest misgiving. The position baffles description, and it is unquestionably a throw-back to the ages when men nursed their fears, trembled before oppression, and were afraid even of the thoughts which, by a divine dispensation, are given to each and all as the elemental function of humanity's progress and welfare.

The Press of the world must be entirely free. Official versions handed out to a muzzled Press become a dope. evil in its effects, leaving the victims a pitiable spectacle, because those in whom freedom of conscience has been implanted are left in a condition worse than that of the slave enchained.

We are suspicious of any system which admits of the persecution of opinion, the suppression of free discussion of affairs, or the dissemination of current news.

—

A World where Death is Welcome

The following editorial occurs in *The Christian Century*:

For years it has been the fashion to discuss whether another war would bring the collapse of civilization. As we view the Hungarian miners who imprisoned themselves for five days, holding death preferable to the attempt to keep alive on less than $2 a week, isn't it time to awake to the possibility that the war we have already fought may have destroyed civilization? Consider the picture: Twelve hundred men, working in a coal mine in Hungary to make profits for British and Austrian owners, reach such depths of despair that they say farewell to their wives and children, descend to the bottom of the mine, and announce that they intend to die there. For five days they remain, awaiting death in the darkness. Food sent by their families is refused. Negotiations attempted by the government are spurned. To the world the miners send this message: "We have decided deliberately to commit suicide if our demands are not met. Suicide by starvation in the heart of the earth is no worse than slow death by starvation if we continue to accept less than $2 a week. We are Hungarians. As such we hope that our countrymen may hear our cry of pity from the depths of the mine and from the depths of our hearts." At the last possible moment the company granted most of the wage demands and the men returned to life. But a world in which such an incident can occur is a world whose civilization is perilously near collapse.

—

Twentieth Century, the Age of Violence

It is no use deploring wars, revolutions and political assassinations unless we are honest enough to face the root causes of these evils. So the editor of *The Inquirer* proceeds:

Mr. H. L. Beales has told us that "the makers of history books have a way of describing past periods of human life by short descriptive terms," such as the Reformation and the Industrial Revolution, and he adds that unless things alter and alter quickly, the future historian will probably call our own age the Age of Violence. World war, national revolutions, political assassinations, and a fierce, insurgent revival of militarism in its darkest aspects in every so-called civilized community, fill the observant mind with a horrifying dread of what the morrow may have in store.

Thirty-four years ago, at the turn of the century it was confidently expected that the Twentieth Century would prove to be an age of steady social progress. The emergence of a spirit of humanitarianism, and opportunities for world commerce and travel had so vastly increased in the preceding decade, that there seemed no doubt that the coming years would see a rapid development of all the forces making for world order and peace. An ironical prophecy as seen in retrospect! To quote Mr. Beales: "It is doubtful whether save in the rather similar period between 1815 and 1850, there was ever such a time when wars and revolutions were so frequent as in our day. At bottom, the same forces were at work a century ago as now. Wars and revolutions are not accidents, nor merely just outbreaks of bad temper. Ours is an age of violence because people are so moved by ambition, or so oppressed by what they feel to be tyranny or injustice, or so determined to control the things which spoil their lives, that they will defy the forces of law and order, face discomfort and even death, for causes they feel sacred."

It is no use our deploring such tragedies—it is indeed, unworthy of us to deplore them—unless we are honest enough to face the background of social bitterness and conflict for which in some measure we are all responsible. Wars and revolutions would be very infrequent affairs were our world as well ordered as we know it ought to be. Our civilization is defective, and its machinery is not working properly, and the ugly, brutal deeds which again and again appal us are to be rightly regarded as symptomatic of diseases to be erradicated at their roots.

—

India's Aspirations in the World

A meeting of the Committee of Delegates of the Confederation of Oriental Students was organized in Milan on May 5, in which Italian students were also present. Amongst others, Prof. Wadia spoke on the above subject, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

concluding portion of which is quoted below from the *Young Asia* of Rome :

The India of tomorrow is an India full of potentialities. In the past, India has welcomed and absorbed and even assimilated multitudes of races and peoples, even as your own Italy welcomed and absorbed Etruscans and Sabines, Lombards and Goths. Yours is the land of the palm and the olive and the vine ; yours is a vaster agricultural country, rich in minerals, fertilized by the smiles of the gods who have given its rivers and forests and rains. Left to itself, free to follow out its own genius, it can become to an increasing extent the market place of the world for the free exchange of commodities on a co-operative basis :—much more it can be the market place for spiritual intercourse, where the gifts of the spirit, unlike the gifts of material goods, can grow by being shared. Gandhi and Tagore, like your own Virgil and Dante, belong to the world. Europe has nothing to fear, everything to hope for, from a free and prosperous India. Imperial preference is a passing show—the accident of our British connections. On the bases of a free and equitable exchange, India has such an abundance of raw materials of all kinds, that she can part with them without becoming impoverished. But whilst we talk in terms of material welfare and prosperity, let us also remember that even matter and material prosperity ultimately rest on imponderables, whether we call them protons and electrons, or love and trust and mutual respect. Where these are wanting, the very sources of life get dried up, making for ruin and destruction. Our freedom we may be able to win for ourselves—but this freedom will not be worth possessing, if it is not accompanied by the good will and co-operation of the rest of the world. Italy has well been proud of its past, its sense of discipline, its gifts into the world of law and organization, and its heritage of art in its highest expression. Your Duce only recently spoke of the civilization of the Mediterranean centred in Rome and resting on a basis of universalism linking East to West. Can I, in concluding, hope that the India of tomorrow, loyal to its old culture and traditions, may become also the meeting place of the East and the West, returning to Europe hundred-fold in the gifts of the spirit what it may have received, making possible once again on earth the city that is sit on the hills—the (civitas dei) ?

—

EAST and West

Mr. R. Nagaraja Sarma in a review article in *The Indo-Malayan Review* says :

"If East and West are to enter into a real partnership," observes Dr. Kenneth Saunders in his latest book ("The Ideals of East and West" by Kenneth Saunders D. Litt., Cambridge University Press. 10sh 6d.) "these great teachers must be understood by men of good-will to-day", referring to Buddha, Confucius, Krishna and others who have from time to time appeared during grave crisis in the life of communities and nations and preached the gospel of virile moral and ethical dynamism. Dedicated to His Highness the Maharaja Gaekwar of Baroda and to the author's own students Eastern and Western, this volume of Dr. Kenneth Saunders contains a brief yet illuminating survey of "The Ethics of India", "Ethics of the Chinese", The Ethics of the Japanese", "The Ethics of the Greeks", "Ethics of the Hebrews" and "Christian Ethics" together with an anthology in prose and verse dealing with those systems, which being subjected to the control of the selective interest is made to reflect not merely the comparatively low level of ethical advancement at which the masses have often remained and become fossilized as it were, but also the exalted heights of moral and spiritual progress reached by the masters of thought. Greek and Hebrew systems form fountain-source from which Christian Ethics has been derived. Even so, the Ethical system of the Japanese has been derived from the Indian and Chinese systems. The author has thus attempted brief statement of the essentials of the Ethical systems of the Greeks and Hebrews, and of the Christian Ethics derived from them, of the systems of Indians and the Chinese, and of the Japanese system derived from the latter.

In the first chapter an account of "The Ethics of India" is attempted, the evolution of ethical theory and practice being marked off into three epochs, pre-Buddhist, the Buddhist, and the post-Buddhist. He believes that the Gita contains the finest exposition of the ideals of morality and religion prevalent in post-Buddhist India. Under three periods, the ethical evolution of the Chinese is summed up in the second chapter. Following Dr. Hu Shih, the Sinitic Age the Buddhist Era, and the Chinese Renaissance distinguished by the spread of the influence of Neo-Confucianism are the three landmarks which the author emphasizes. Tnat Japanese Ethics has been moulded largely by a blend of Buddhism and Confucianism is made clear in the third chapter. After a survey of the Ethics of the Greeks in the fourth chapter, Dr. Saunders concludes that "Devotion to mean and to moderation led too often to mediocrity and monotony." "Hebrew religion and ethics " writes Dr. Saunders in the course of the fifth chapter, "rise to great heights and fall to great depths, and progress follows a zigzag path." Dr. Saunders has written the concluding chapter on "Christian Ethics" *Con amore.*

—

Broadcasting for Rural India

Lieutenant-Colonel H. R. Hardinge is of opinion that whatever be her political future, rural India badly requires some sort of enlightenment, so that the ignorance and isolation of the peasants may be minimized to a certain extent. He suggests in *The Asiatic Review* :

Wireless, a miracle of the West, can be of even greater service in the East, where scattered village communities live isolated, drab lives, and illiteracy predominates.

Whatever may be the political future of India, the rural population of that vast country is in urgent need of enlightenment, so that their lives can be made less drab and hard, and so that they can take their true position in the economic structure of the world. For the peasant is the backbone of India. He is the chief source and creator of India's wealth and greatness. And yet the life of the peasant is a precarious existence of primitive poverty, handicapped in all directions by ignorance and superstition. This state of affairs has long been appreciated, and the problems of rural reconstruction figure prominently in the records of administration in India. Much has been done, but certain handicaps have seemed insuperable.

Enlightenment has to be brought to so many people, speaking entirely disassociated languages, living in villages so widely separated that a large proportion

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the time given to a tour of instruction is eaten up by travelling from one place to the next. And these people are almost all entirely illiterate, so that instruction must be oral. Furthermore, instruction must be reiterated at frequent intervals, for by the time a lecturer has moved on to the next village, his lesson tends to be forgotten in the one that he has just left. It is generally agreed that a material advance in the direction of raising the standard of living of the Indian villager could best be achieved by a *daily* programme of instruction, devised by experts on essential matters of rural and individual economy, presented in a manner to appeal to the simple minds of the illiterate, and interspersed with items of general information and entertainment. And the essential factor is the regular, *daily* presentation of that programme.

This programme would seem to be the dream of a visionary, outside the bounds of practicability if only on the score of expense, requiring a colossal staff of trained men and a mammoth organization. But broadcasting—that miracle of the West—now offers itself as the medium by means of which daily instruction can be imparted simultaneously to scattered villages in all directions, the voice of one expert carrying the message over an extensive area and penetrating to places where religious barriers or other factors, would ban the personal intrusion of the speaker.

Immigration to Argentina

The question of openings for settlers in the Argentina Republic has been referred to in the 18th session of the International Labour Conference, held this year. Dr. E. Siewers has prepared a study of the question, an extract of which is reproduced below from the *International Labour Review* :

In 1932, for the first time for forty years (leaving out of account the war period), there was an adverse balance of migration in Argentina, the number of departures exceeding the number of arrivals by 12,119. The measures taken by the Government of Argentina to reduce immigration and the restrictive policy of certain emigration countries supply part of the explanation of this phenomenon. But the most important factor has undoubtedly been the agricultural depression, for migration movements in Argentina have always been immediately affected by the state of agriculture.

It is indeed difficult to see how a country of 2,797,113 square kilometres, stretching from subtropical almost to subarctic regions and possessing such a varied wealth of resources as Argentina, can be left to depend solely on the natural increase of its population for the development of this vast territory. At the same time, an immigration policy that is not based on a careful study of the real immigration requirements and the best methods of organization might easily prove disastrous both for the economic welfare of the country and for the immigrants themselves. The aim of the present article is to study the possibilities of immigration to Argentina at the present time, and the problem of land settlement as a part of the immigtation problem.

In the past the development of Argentine agriculture has been made possible by a steady influx of men and of capital, which have arrived by different routes and thus have often lacked the co-ordination needed for the efficient and profitable cultivation of the soil. Settlement schemes following a pre-established plan and combining the various factors involved on rational lines have been the exception.

Although the depression has reduced immigration to Argentina in recent years to a level below that of the departures of returning migrants, it seems probable that the country cannot in the future depend entirely on the natural growth of its population to people the rural areas. The Decrees passed in rccent years for the restriction of immigration have all made an exception in favour of experienced agriculturists with enough capital to purchase their holdings, which shows that the Argentine Government holds this view. But experience shows that the mere control of immigrants at the frontier does not always ensure their judicious distribution within the country, for on the one hand fraudulent entry is comparatively easy and on the other selection at the frontier is no guarantee that the immigrant will remain in the occupation for which he is selected. The situation is quite different when the immigrant enters the country under a settlement plan in which labour, land, and capital are linked in an organic unity. The most desirable course would therefore seem to be to encourage land settlement as part of a policy of "planned" immigration. To draw up and give effect to such a policy will be quite as important a task for the National Land Settlement Department as turning the tenant farmers already at work in the country into the owners of their holdings.

—

Salesmen of Mars

Though peace campaigns have been pushed forward everywhere, the works of 'agents of death' are silently going on unperceptibly. The editor of *The Catholic World* throws some light in this direction :

Since we have drifted away from the senatorial investigation to the more stimulating subject of Death Merchants, let us cite a few more instances of their broad-mindedness. Chief of the murder-mongers is Sir Basil Zaharoff. The newspapers call him "Supersalesman of Death" He has or has had interests in Russian, Turkish, English, French and German armament companies. Zaharoff is a Greek (*timeo Danaos*), master of fourteen languages, intimate friend of Lloyd George, Clemenceau, Briand and Venizelos in the days of their power. During the War he sold munitions "on both sides of the fence," was knighted in Great Britain, wears the Grand Cross of the Legion of Honor of France and is fairly loaded down with decorations from other countries. He rather favours England, has a sentimental regard for Greece and in spite of his opposition to German activity in Spain, he had offered Germany a large private loan. In the story of his life fact runs into legend, and no biographer will ever be able to discover the exact line of demarcation. In his career truth is wilder than fiction, more fantastic than legend. ..He has maintained super-regal palaces in half a dozen countries. Perhaps it is only legend that he is served at table from a solid gold service, uses spoons incrusted with jewels and that a fleet of aeroplanes is employed to bring to his kitchen delicacies from all corners of the earth. One newspaper syndicate writer has it that Sir Basil entertained "the colossal dream of forming a Near East Empire in which he could dictate to Europe, play off the Moslem against the Chirstain, control British and French oil, make and unmake world policies and be a hidden power greater than

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

any king." Be that as it may, it is no dream that the sale of arms and ammunition was the foundation of of his monstrous power and that he made his way to world renown over a hundred times more dead men than Nepoleon ever saw. When he passes on, perhaps a symbolic painting of him will find its proper place beside that of Bonaparte in that chamber of art horrors, the Musee Wierz.

But Zaharoff though supreme is not unique. There are other conspicuous representatives of industrial internationalism. Alfred Nobel, who by some freak of mad logic (or may it be a stroke of saturnine humour ?) has associated his name with the movement for peace, has dynamite factories or agencies in all parts of the world, from Sweden to South Africa, from Japan to South America. I have personal reason to remember his association with South America. I happened once to be on a freight ship anchored off a small town in northern Chile when one of Nobel's fleet loaded with explosives came within an ace of crashing into us. The boards of directors of the far-flung Nobel companies are composed, with a beautiful regard for international good fellowship (or if you prefer with supreme political sagacity) of Frehchmen, Englishmen, Germans and indeed, nationals of every country in which he operates—and we have seen his protestation that he operates in every one.

The "Merchants of Death" have therefore the only complete and efficient League of Nations. I have read in a newspaper article prepared for the Scripps-Howard syndicate that munitions makers attend the the Peace Conferences at The Hague because they find it a good place to pick up contracts for war material. It is no jest. Salesmen of munitions batten upon war-rumours, and where are war-rumours more rife than at a Peace Conference ? A representative from Roumania, for example, is told in confidence that Bulgaria has placed an order for 100,000 rifles. Thereupon, naturally, Roumania places a bigger order. Very simple. And cheap, too, for the salesmen need not travel to every capital when they can find customers from all capitals gathered together in one.

The Majesty of the Law

Mr. Edward Podolsky in *The Commonweal* advances the theory that constant trifling annoyances of misadministration of the law bring about a disregard for it and induces the average man or woman to break it. He goes on to say :

One Of the most impressive laws in biophysics is that which proclaims that if constant irritation is applied to a group of harmless and properly functioning cells dire results are very likely to follow. A mole on the cheek will remain simply a mole on the cheek if it is left alone. But if it is subjected to constant rubbing and irritation it will become something more than a mole on the cheek. It will become a skin cancer with all the fearful potentialities of skin cancers to maim and destroy.

Not only do constant irritation and trifling annoyances lead to disaster in the human body, but very frequently the same thing takes place in the social body. It is not alone disease and surroundings that make little criminals out of good people, and big criminals out of little criminals. The constant trifling annoyances of misadministration of the law accomplish the same thing.

It is very seldom one colossal error of the law which brings on the evil results. It is the constant irritating effects on the average man and woman of laws concerning trifles that finally bring about disregard for the law. Contempt for the law is brought about by the law making itself ridiculous. And it is contempt for law which induces the average man or woman to break it.

In modern society the law is constantly making so many ill-considered moves that one cannot blame the average man or woman for loathing it. With the ushering in of the motor age almost everyone has been arrested for one traffic violation or another. It is not the traffic violation in itself which is responsible for making a scofflaw out of the average citizen ; it is the interminable waiting to pay the fine, the wholesale dispensing of justice, the cattle-like crowding of traffic courts.

The newspapers mirror faithfully the workings of the law. It marches majestically across their pages. We learn that it is not the dyed-in-the-wool criminal who is the object of cop-wrath and correction by the magistrate and other minor judges. Most frequently it is the law-abiding citizen who finds himself in the clutches of the law.

—

A Plea for Indignation

Mr. Charles A. Engvall writes in *The Christian Register* :

Before one works himself up into too excited a mood of righteous indignation over Nazi and Fascist tactics, it may be well to take another glimpse at the current American scene. Scarcely a week passes without newspaper mention of a lynching or of some act of racial discrimination, be it in a Washington restaurant frequented by Congressmen or in a Dallas hotel thronged by convention-goers.

Before being shocked too severely by the Hitler purge, it may be well to remember that down in Alabama Negro men will probably soon be executed as a result of the infamous Scottsboro trial. Before crying down the doctrine of Aryan purity, it may be in order to examine the anti-Semitic, anti-Oriental, anti-foreigner dispositions that are present in our land of liberty.

Self-appointed vigilantes wrecking centres of "radicalism," as in the San Francisco general strike, are akin to storm-troopers crushing labour unions. Skullduggery abroad naturally provokes indignation and resentment, but these emotions are just so much more adrenalin unless they are directed into useful purposes.

Newspapers and radio commentators reveal little of this true vigilance in their treatment of strikes, which they deem "crimes toward society" or "violations of law and order." If the codes are unjust or unenforced, if newspapers are hostile, what else can the working-men do but strike ? Fulminations about foreign agitators and anti-social behaviour do not penetrate to the root difficulty.

If one would be indignant, and there is much cause, let the emotion find piercingly intelligent and productive direction. Instead of dealing always in co-operation and toleration, the liberal church may well deal in indignation.

Democracy Since the War

At a meeting held at Chatham House, Prof. Barkar spoke on the above subject, extracts of which are quoted below from the *International Affairs* :

"Our epoch is not particularly gay; but it is passionately interesting. It is not a heap of ruins; it is a building-yard in which, to the sound of saws and trowels and hammers, a world is being erected."

The words are those of M. Joseph Barthelemy, in a work of the year 1931 on the crisis of contemporary democracy. They are encouraging; and they are true. No old Liberal—a species of which I am—an undesponding specimen—need beat his breast to-day. Much of London has been pulled down, It has all been rebuilt, or is now in the building. Much of the world has gone into liquidation. It will emerge from the receiver's hands A great and convulsive war was fought from 1914 to 1918. Such a war does not end in peace: at any rate it does not end in the peace which is tranquillity. If we said to ourselves, in 1919,

> "Fair Quiet, have I found thee here,
> And Innocence thy sister dear ?"

the answer we received was a blunt "No." But if we did not find quiet and innocence, we found a building-yard. At first it seemed as if the building was to proceed with an American rapidity of construction. In 1920 we might hope that the war to end war had ended in a League of Nations, and the war to make world safe for democracy had issued in a rich harvest of new democratic constitutions. Three Empires, all more or less autocratic, had perished: there were Republics in Berlin and Vienna, in Prague and Warsaw, in Kovno and Helsingfors. But a change seemed to come in 1922. The building was not yet done: and a new type of construction began to appear. If autocracies had yielded place to republics, democracies now began to disappear before dictatorships. By 1930 there was a serried series of these dictatorships. They were of different forms. One, in Belgrade, was monarchical, and another, in Angora, Presidential. Others, in Madrid and Warsaw, were military. A third form—exemplified, if exemplified very differently, alike in Rome and in Moscow, and exemplified in Moscow even before 1922—was the dictatorship of a party. Differing in the forms which they assumed, these dictatorships also differed in the ends which they sought to achieve. Some were dictatorships of the Right; others were dictatorships of the Left; and one—the dictatorship of Mustapha Kemal, with its mixture of sweeping reform and authoritarian control—might be said to include both the Left and the Right. Since 1930 dictatorship has vanished from Madrid; but it has entered in Berlin and Vienna. Some would even say that it has entered in Washington. But the President of the United States, by the terms of its constitution, is always a potential dictator; and when he is backed by Congress, or the country, or both, the potentiality becomes actuality, legal actuality. *Vixere fortes ante* Franklin Roosevelt. Abraham Lincoln and Woodrow Wilson were also dictators in their hey-day.

We seem to be confronted by a great and universal trend which sets against democracy. But we must not be too hasty. Even before we attempt this analysis, there is one thing which for the sake of balance and perspective, ought to be said at once. Whatever may be our opinion of democratic institutions, it would be absurd to maintain that the democratic spirit—the spirit of interest in general community problems, the spirit of general participation in their solution—has really receded in the last dozen years. On the contrary, there has never been a time in human history when, in all countries, the minds of men were more arrested by political problems, or more intent on debating and (if it be possible) solving these problems, than they are today. If the world is a building-yard, it is crowded with busy workers and thinkers. Many as are the "anvils and hammers working," they are not more "than there be pens and heads there sitting by their studious lamps, musing, searching, revolving new notions and ideas wherewith to present, as with their homage and fealty, the approaching reformation." If, in a preliminary way, we may assume that democracy is a temper and a habit of free discussion of ideas—of free competition between ideas—when shall we say that there was more of that temper and habit than in these days ?

Prof. Barker concludes with the following statement :

We *may* lose the battle of parliamentary democracy in England for the time being, though that would not be my own prophecy. We *may*, short of that, have to modify the combination of factors which makes up our system of parliamentary democracy, though I see no particular modification which I desire, or even expect, except in matters of detail, such as the composition of the Second Chamber, the procedure of the First Chamber (which is at some points antiquated and cu brous), the methods of voting in elections, and other similar matters. But there is one thing which I believe will never be finally lost, in England or elsewhere, on a long-time view of the nature of political society and the necessary mode of its operation. The thing I mean is government by discussion—government by the free competition of different political ideas, by the process of debate between those ideas, by the method of adjusting competition and debate in a compromise which reconciles differences. No form of government can be true to the process of social thought unless it proceeds on that basis. My fundamental belief is a belief in government by discussion, free, patient, rational discussion. This to me is the highest form of democracy, when a free people, freely thinking its different thoughts, freely expresses them by different parties, freely debates them in a freely elected parliament, and freely reconciles them by the free interplay and co-operation of parties—government and opposition, cabinet and anti-cabinet—in such a parliament. Government by disscussion, by debate, by dialectic, this to me is the true democracy; and it is a thing which is inevitable when the mind of man, duly educated to his high nature of a rational being, is acting in its true and inevitable mode of operation. You may say that I believe in government by dialectic rather than in government by Demos. I reply that the Demos to which I look forward will necessarilly love dialectic, the grand dialectic of public debate. "Give me the liberty to know, to utter and to argue freely according to conscience, above all liberties." So said Milton. I can say nothing better, or as good; and I have nothing more to say.

Beyond Our Senses

The report of the following amazing astronomical discovery by Dr. Abbot has been noticed in *The Commonweal* :

Supplementing the amazing discoveries of recent years that the dark spots in many parts

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the night sky. and particularly in the milky way, are not simply vacant holes in space in which occur no stars but are "dark nebulae" or groups of black stars, is the somewhat terrifying announcement on October 2 by the Smithsonian Institution in Washington that their scientists have discovered the existence of many death-dealing stars. The death rays of these stars would wipe out all life if they could reach the earth. They are prevented from doing this only by a thin layer of ozone high in the stratosphere. These rays would not produce a sensation of light on human organisms. The stars radiating them are literally too hot to be bright, having a temperature of 36,000 degrees Fahrenheit on their surfaces, a heat three times that of the sun. The greater part of their radiation consists of ultra-violet rays of very short wave-length. Virtually all of the blue-coloured stars in the night sky were found to be of the death-dealing type. Rigel, in the left foot of the constellation Orion, is an example. The discoveries came in the course of research last summer at Mount Wilson Observatory, California, by Dr. Charles G. Abbot, secretary of the Smithsonian Institution, and his assistant, I. B. Aldrich. New astronomical instruments of superhuman sensitiveness measured almost infinitesimal amounts of star radiatioms reaching the earth after years of travelling at more than 186,600 miles a second.

Why Japan has bought the railway

The Christian Century in an editorial observes:

Dispatches from the far east state that Japan and Russia have stopped bickering over the sale of the Chinese Eastern railway. Japan has agreed to pay 170,000,000 yen (about $51,000,000 at present exchange) and Russia has agreed to withdraw all soviet employees within six months after the bills of sale are exchanged. The sale price represents only about a fourth of Russia's first asking price, but it is an advance of 20,000,000 yen over the "last offer" which Japan made in midsummer. Consummation of this sale will help to quiet affairs in the orient, at least for the time being, but the motives which have led Japan to pay such a price for a railway she did not need should not be overlooked. That she did not need the C.E.R. can be demonstrated by a study of any recent map. From the economic standpoint, the C.E.R. has been so blanketed by other railways, rushed to completion since the Japanese occupation, many of them having more direct routes to important ports, that the old Russian line even under complete Japanese control is going to be hard pressed to pay its running expenses. From the political standpoint, troop movements to the border in case of trouble with the soviets will not be affected since the Japanese, in case of an outbreak, would have simply seized what they have now paid for. Then why has the railway been bought? For two reasons. First, the sale, nominally to Manchukuo, involves the virtual recognition of that puppet state by Russia. Second, by clearing the slate of land problems on her Siberian flank, the Japanese empire is now left with a free hand for the impending naval negotiations with Britain and the United States. Purchase of the C.E.R. is but one more indication of the determined spirit in which Japan is entering the naval negotiations and of the drastic demands which she means to present there.

—

Turkey's Five-years Plan

The following discourse by Mr. Wyatt on Turkey's attempts at economic expansion occurs in the *International Affairs*:

During the past few years so much has happened to absorb our attention in the realm of international relations and in world economic problems, and besides, we have been so concerned with the difficulties of our own country, that perhaps we have rather tended to lose sight of the changes, development, and progress which are taking place in any one foreign country. In any case it is no exaggeration to say that, with the exception of Russia, where the process has been very different, no country has undergone such drastic and fundamental changes as has Turkey during past ten years.

A bare list of them is, in itself, impressive:

The abolition of the Sultanate and the end of the house of Osman, after a rule of over 600 years, in favour of a modern form of government.

The abolition of the Caliphate, with its consequent effect upon Turkey and the whole Moslem world.

The sweeping-away of the Capitulations and with them the end of all religious, legal, commercial, and fiscal privileges for foreigners in Turkey.

The cessation of the international control in Turkey of Turkish revenues by the Ottoman Public Debt Council.

The exchange of populations with Greece, which, although it has involved temporary disadvantages to Turkey in skilled and semi-skilled labour, has brought about national homogenity and is making for national soliderity.

The abolition of the old Moslem laws, established for a thousand years, in favour of modern legal codes based upon the principles of Roman law.

The emancipation of women and the abolition of polygamy.

The adoption of Latin characters for the language, the adoption of the Gregorian calender, the twenty-four hours for time, and the metric system for weights and measures.

All this, and more has been done in a space of time which counts for a day in the life of a nation. It has been accomplished without revolution or bloodshed by a man who imposed his will on the people, as he judged for their good, and by a government which has obtained from Europe complete political, economic, and financial independence for post-War Turkey.

Of all these reforms, perhaps the emancipation of Turkish women is fraught with the most far-reaching potential consequences for Turkey. Let us think what this may mean for the coming generations, when we remember that the indolence and lack of business inclination of certain classes of Turk must have been due largely to their upbringing in secluded harems by women who knew little of the world and who were often illiterate.

To-day the better-class Turkish women are already tending to become more like their foreign sisters, and their influence upon future generations is bound to be very different from the past. Taking the long view, it is probably true to say that the biggest thing the Ghazi did for his country was the grant of freedom to his womenkind, with obligatory education.

Great strides are being made in the education of the people. Already there are nearly three times as many schools and nearly four times as many teachers and pupils as there were in 1913.

INDIAN PERIODICALS

Is Dictatorship desirable ?

Prof. Benoyendra Nath Banerjea, M.A., delivered an address on "Political Significance of Modern Dictatorships" at the Presidency College. *The Vidyasagar College Magazine* published a few notes from the speech, from which the following is quoted :

The "closed system" of nationalism reinforced by the insane scope given to attempts to resuscitate 'economic nationalism' under the dictation of 'big business' has ushered in dictatorial rule in many countries. Even in England rule by Orders-in-Council, even to the extent of imposing taxes without the prior concurrence of Parliament, has become the order of day. The Roosevelt experiment again is no slight departure from the Jeffersonian ideals of democracy. "Gods or Bees"? —asks Mr. Leonard Woolf in a recent address. Do we want the rule of the queen-bee in the bee-hive or a society of men exalted in the Kantian sense to that of a super-man ? The political significance of the dictatorships to-day lies in what is likely to be the answer of the 'average man' to this question.

Asked as to whether he had given Athens the best constitution, Solon is reported to have replied—'The best for this city at this time.' But are the dictatorships even the best for their countries to-day ? In an inter-dependent world, the democratic ideal cannot express itself fully, if it is limited in scope within one or a few nations. The onslaught of dictatorships have hit successfully at the *morale* of the League of Nations. Nobody denies that if 'the real function of Parliament, as it is to-day, is to prevent anything being done by endlessly talking about it,' we have to recast it and explore the alternatives to the technique of democracy. It only betokens a rash mental attitude if we go back again to mediævalism in search of a short cut. The fundamental question is not whether democracy can survive, but whether we shall allow the very fabric of the civilization we have inherited to crumble or not.

—

Use and Abuse of Hospitals

Journal of The Indian Medical Association writes editorially :

Bureaucratic administration of state hospitals and need of the private hospitals for funds led to a number of unforseen results. There developed a system of partial payment by the patient for the hospital services he receives, appointment of so-called honorary medical staff, and indiscriminate medical service to many, who are perhaps able to pay for it.

The general practitioners are thus exposed to very unjust competition by hospitals and particularly the out-patient departments. A large number of general practitioners are, therefore, obliged to consider if they should co-operate in improving the hospital administration or remain as indifferent as hitherto in order to safe-guard their own position.

More alarming, however, is the question of admission or rejection of a patient at the hospitals. It is a common practice both in State and private hospitals for cases sent by the Visiting Medical Staff and administrative authorities to be held to have a paramount claim for admission and in fact they obtain admission to the exclusion of local out-patients. Admission or rejection of patients at hospitals has thus passed into hands of Visiting Staff and they are not careful to prevent admission of unsuitable cases. The logical and increasing feeling on the part of the the public is, therefore, that the patients sent by the Visiting Staff have a prior claim to admission.

Evils which indiscriminate medical charity is undoubtedly inflicting not only on the medical profession but also on the public, can only be remedied, if provisions, as in the National Health Insurance Act, Hospital Contributory Schemes or Hospital Provident Schemes etc., of England, are made available in India.

We invite the attention of the medical profession in general to the increasingly difficult problems of hospital administration in all its aspects and would welcome general scheme of hospital grouping, construction, administration and policy.

—

Culture of Bengal

In an important paper on the above subject in *The Calcutta Review* Mr. Dhurjatiprasad Mukherjee, M. A., traces the history of Bengali music as follows:

The history of music in Bengal is interesting. We know that Bengal was not cut off from the main line of Hindustani music which had been repaired and reconstructed by the Moghuls in Northern India. The Kirtan was Bengal's own ; we are not so sure about the Bauddha *Dohas*. Judging by the names of melodies affixed to old *padas*, one can surmise that some of them were sung in classical melodies. One possible explanation is that classical music borrowed these terms from folk-music. The alternative explanation is that the names of classical melodies were arbitrarily fixed on the padas. Modern Kirtaniyas, however, are of opinion that the padas were really sung in high style, and that its disapperance is due to the exigencies of chorus-singing. This is of course certain that Kirtans and Dohas are older than the Hindustani style. But we do not know their technique. We have it on the authority of Dr. Prabodh Kumar Bagchi that in a manuscript found in Nepal the names of certain Raginis are given. But, unfortunately, they do not correspond to the known melodies either of the Hindustani style or of Kirtan as sung today. On the other hand, it has to be remembered that the rise of Gaudiya Vaisnavism, which is supposed to have been responsible for releasing the energies of the people of Bengal pent up since the Pala period, is fairly contemporaneous with the Muslim predominance in Bengal, as well as in Northern India It is equally historical that the music of Northern India started on a fresh and an amended

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ease of life under the auspices of the Muslims, the Pathans and Moghuls of Delhi, the Shrikis of Jaunpur, and the princes of Gwalior and Gujerat. The likely conclusion is that the Vaisnavism of Bengal, disruptive and reformative as it was of Bengali society at one and the same time, was not above assimilating the melodies propounded or popularized by the Muslim princes. Even if the affixing of names from the classical style renovated by the Muslims was not an instance of assimilation, it was undoubtedly a courteous recognition of Muslim rule or a neat return for patronage. The special point however is the process of assimilation in the mode of singing. The Hindustani classical style uses words primarily as lines to hang airs upon, the Kirtaniya plays chiefly with words and religious emotions. When words and emotions are dominant, the airs lose their purity at first, no doubt, but, later on, words and emotions clothe the airs, and a new style emerges. Its virtue is in the aptness of the fit. It evokes a new *rasa* just as much as two atoms of hydrogen mix with one of oxygen to produce water, a new substance. This merging of duality in the unity of a new *rasa* is the true source of the modern movement in music in Bengal. Yatra-music, folk-music, like Bhatial, Ramprasad and Nidhu Babu's styles down to Rabindranath, Atul Prasad and Quazi Nazrul's form one long series of attempts at the work of producing a new *Rasa*, the *Sangit-rasa*, which is neither the purely musical one of Hindustani tradition nor the mainly verbal one of chants, dohas, or recitations. The marriage of words and notes is a singularly happy illustration of the special feature of Bengal's culture, *viz.*, adaptability, and supports the contention indicated in previous paragraphs.

—

The History of words

The history of words is a very interesting reading. These extracts are taken from *The Twentieth Century* :

Let us, to begin with, consider the words *idiot* and *dunce*, and we shall discover something of the Greek sense of complete living and social responsibility enshrined in the one word, and something of the conflict of ideals and outlook in the age of the Renaseance reflected in the other. *Idiot* goes back through French and Latin, to the Greek "idiotes", literally 'a private person', from "idios" meaning 'private'. The Greek noun was originally used to characterize one who undertook no public responsibility; but, since participation in public life was to a Greek a necessary part of a complete education, the word came gradually, in Greek itself, to signify an untaught or uneducated person, a layman. Something of these Greek senses of the word survives in the English of the seventeenth century, severl examples being found especially in the works of Jeremy Taylor, who more than once brackets "ideots" with "private persons". But the word is now charged with a frankly derogatory signification; from indicating one whose powers were but undeveloped it has come to denote one actually deficient, a congenital nitwit. And this deterioration is itself instructive. The deterioration of words like *crafty*, *sly*, *cunning*, which originally implied skill and knowledge, illustrates one weakness in man: his proneness to turn his superiority to evil account. The deterioration of *wanton* and *lewd*, which too, at one time, meant no more than 'uneducated' 'unlettered', 'lay', but now connote lasciviousness, illustrates another man's proneness to slip from ignorance to impudicity, from lightness of heart to incontinence of spirit. The sinking in the scale of *idiot*, *silly* (once equivalent, like German "selig", to 'blessed', 'happy'), *simple*, *innocent*, and a number of similar words illustrates a third failing : our tendency to pass from condescension to more or less open contempt in our attitude to those unversed in the ways of the world.

The history of *dunce* is very different but equally informative. The word is, by a strange irony, descended from the name of the Subtle Doctor,—"the wittiest of the school divines," as Hooker called him—Duns Scotus. For, at the Revival of Learning, the Schoolmen and all their works stank in the nostrils of the humanists, and the hair-splitting of the Scottists in particular, who were dominant in the Universities, drew the concentrated fire of humanists and reformers alike. These champions of the old learning, these Dunsmen, as they were derisively named, had only Duns learning, which has mere sophistry; they were perverse obscurantists impervious to the new learning, stupidity was the badge of all their tribe. To the new generation a Dunsman, or a duns was incurably dull-witted; and, thereafter, one needed only the illogical logic of association to 'conclude that every common or garden dullard was a dunce.

I can here only suggest how such words from place-names as *indigo*, *silk*, *copper*, *cashmere*, *calico*, *lawn*, *damask muslin*, *worsted*, *Port*, *sherry*, *madeira burgundy*—I might go on adding to the number—tell of the currents of commerce and trade and industry; how words like *mackintosh*, *macadom*, *hansom*, *nicotine*, *guillotine*, *dahlia*, *fuchsia*, *shrapnel*, *gat* (*ling*), *volt*, *galvinism*, *mesmerism*, bear witness to the devices, inventions, discoveries, and scientific achievements of the past; how *sandwich*, *chesterfield brougham*, *spencer* bespeak, if nothing else, the whims and fancies of the individuals they commemorate and incidentally, the capriciousness of Dame Fortune, who has conferred a species of immortality on four noble lords otherwise worthy of being well and truly forgotten; how the word *derrick*, on the other hand, which is a noted hangman's name transferred to a hoisting apparatus, reveals not only the grim humour of which man is capable but also the democracy of language, which admits to its parliament of words a public executioner as freely as peers of the realm; how, *maudlin*, *tawdry*, *pantaloons*, descended as they are from the honoured names of Mary Magdalene, a popular Enlish saint, St. Audrey, and St, Pantaleone, the patron saint of the Venetians, illustrate the power of more or less accidental associations to give even a saint, so to speak, a bad name. And, of course, there is the lesson of *boycott* a word that has passed into several languages, and the not very different one of *lynch*, another word of international currency, which, whether an appropriation of the name of Charles Lynch, a Virginian Justice of the Peace, or of a locality called Lynche's Creek, belongs here. And if these words are shameful reminders of the passions that often move a mob ("mobile vulgus" indeed !), *gerrymander*, enshrining the name of Elbridge Gerry, Governor of Massachusetts who manipulated electoral divisions with a view to favouring his own party, and *burke* (meaning 'smother', though only metaphorically these days), which basely immortalizes the scoundrel William Burke, who carried on a nefarious trade in dead human bodies, making the corpses he needed by smothering his unfortunate victims, are two of a class of words that equally shamefully, and, one might add, superfluously, remind us of the cupidity and greed that often impel individuals.

The Choice of Text Books

Text Books are generally chosen as carelessly as they are written. Strict rules should be formulated to guide the selection committees in their choice of text books. *The Educational Review* writes editorially:

The great discontent which has existed in the matter of the choice of text books in various parts of the country is a matter well known to the public. Things came to a head recently in the Panjab, where the evils of patronage and canvassing for school text-books had become so serious that the Government had to appoint a committee of enquiry which has just made its recommendations. The committee recommends that an Advisory Board consisting of 27 members, nominated by the Ministry and subject to the veto of the Ministry in all matters should be constituted in place of the existing Text-Book Committee. The committee also recommends that the prices of books should be reduced and this task should be entrusted to a competent committee. In any one subject the number of alternative text-books for any one class or sets of alternative books for any one department of the school, primary or middle, should not exceed five and such books should be sent out for review by the Director of Public Instruction. The Director is expected to maintain a secret panel of competent reviewers for this purpose. These reviews are to be laid by the Director of Public Instruction before the Advisory Board. The committee further recommends that alternative text-books approved should be used in schools from the beginning of the academic year, 1937-38. The process of scrutiny and approval of text-books should be repeated every five years when books already on the list should compete afresh with the new books submitted for approval. It is desirable that these recommendations should be studied in detail by other provinces also, as no amount of care and attention can be too much, in a matter of this kind, affecting the interests of thousands of pupils and their parents.

—

The Ottawa Agreement

If the tree is known by its fruit, then it may be safely affirmed that the Ottawa Agreement has proved a veritable source of evil: it has neither benefited Great Britain nor the other members of the Commonwealth. Dr. Lanka Sundaram writes in *The Mysore Economic Journal*:

There is only one test which ought to be applied to establish the fact that a trade agreement was beneficial to a country, that it was instrumental in rehabilitating her overseas trade. Judged from this standpoint, the Ottawa Agreement is a miserable failure. In the final balance-sheet of our international trade adjustments for 1932-33 we paid out for the first time during the post-war period. Our vast customary annual favourable balance of trade, which stood at a hundred and fifty-seven crores in 1925-26, was reduced to a *minus* balance of fifteen lakhs of rupees. If final figures are available for 1933-34 it could have, perhaps, been demonstrated that our overseas trade position is slightly better. It must be regretted that the Ottawa Agreement has not offered any real advantage to India. Dr. Meek's report is a depressing document, the main purpose of which was a sort of jugglery with our commercial statistics. When comparable standards of life and living are not obtaining in India today, any dogmatic apprisal of our industry and commerce must be deprecated,

The rehabilitation of our overseas trade particularly on the export side, which means so much for the restoration of the natural position of our national dividend prior to the depression, is our prime concern today. If the Ottawa Agreement has assisted us in regaining this position, all praise must be conceded to it. The whole argument of this article is that the Ottawa Agreement has decidedly not assisted us in regaining this position. When Canada, Australia and even Ceylon have destroyed the Ottawa Agreement, how long can India look up to this superimposed system of commercial dependency without demur?

Mr. Ranald M. Findlay writes in the same journal:

The Agreements with Canada and Australia affect Great Britain most. In each case the Dominions got big advantages. Foreign wheat, maize, meat, butter, cheese, eggs and fruit have all been taxed, to the advantage of Dominion producers. Over £200 millions of imported foodstuffs have become dutiable since the National Government took office and abandoned Free Trade, and the tendency is towards increased restrictions. Cadada and Australia have sacrificed little in return. Increased preferences to British goods have certainly been granted, but for the most part they have been effected by increases in the duties against foreign goods and the duties against British goods remain abnormally high.

In the two years that have passed since the Ottawa Conference there has been but a slight increase in inter-Imperial trade, and so far as Great Britain is concerned it has been secured, as was anticipated by Sir Arthur Salter, at the expense of trade with other countries. While it is rather soon to make a precise estimate of the gains and losses, the gains in inter-Imperial trade would not justify the Agreements ever if they were several times as valuable, for it cannot be doubted that these Agreements spelled the doom of the efforts that were going to be made at the World Conference to bring about reductions in world tariffs.

In another respect the Ottawa Agreements have proved unfortunate. They have stirred up all the latent jealousies existing between Great Britain and her Dominions, and perhaps a good deal of ill-feeling that has never existed before. The recent Lancashire boycott of Australian goods was an example. The amount of British goods affected by the Australian tariff increase was negligible. It was the principle of the thing that counted. A serious tariff war between Great Britain and one of her Dominions must be regarded as a possibility so long as these Agreements remain.

—

Nation-Building and the Critical Spirit

Mr. Ramananda Chatterjee has contributed a thought-provoking paper in *The Bombay Chronicle Special Congress number*. Part of it is given here:

In order that people should be able to get rid of some orthodox beliefs and practices, it is necessary that a critical spirit should grow up in our midst. And it is desirable that this spirit should manifest itself within each particular community. When at first it manifested itself among Hindus, some of those who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were critically minded became atheists, agnostics, or positivists, some turned Christians, some Brahmos. But gradually Hindu orthodoxy has lost its power and influence to such an extent that there is among Hindus quite a large number of men whose beliefs and practices are known to be heterodox. Of course, this state of things has been brought about by successive groups of critically-minded men and women bravely facing obloquy and persecution.

We know there are in the Muslim community, too, liberal-minded heterodox men. But they have not yet made up their minds to face obloquy and persecution to any very great extent. At present in the Muslim community, the most influential persons are the Mullahs and Maulanas, who issue *fatwas*.

For the birth, growth, conservation and increase of the critical spirit in our midst, we must look to a really liberal national education. It is only a truly liberal national education—not a sectarian orthodox educarion—which can give us unsectarian, liberal, national and international minds. The education given in our State-recognized institutions is not of an ideal kind; but still it frees the mind from shackles of various sorts. If the "National" institutions of various kinds can do better in this direction, they are welcome. But by "National" education Hindus, for the most part, understand an education with as much of Hindu orthodoxy in it as possible, as is proved by the celebration of the Saraswati Puja and other Pujas in many "National" institutions. Muslims also have their separate "National" "University."

But we shall never have a liberal, rational, national and international mentality unless we can shake off the authority of priests, dogmatists, theologians, etc., as such, in the fields of education and politics.

Criticism of Hindu orthodoxy by non-Hindus, of Muslim orthodoxy by non-Muslims, of Christian orthodoxy by non-Christians. etc., is not so fruitful as such criticism by Hindus, Muslims, Christians, etc., respectively. Criticism from outside produces greater friction and exasperation. Hence, the growth of the critical spirit within each community itself is necessary and desirable.

It is not in the fields of religion and social polity alone that a critical spirit is nececsary. In politics, economics, industry, and in every other field of national activity the critical spirit is absolutely necessary.

Chew Long—Live Long

E. H. Risley, M.D., writes in *The Oriental Watchman and Herald of Health* :

The question, "What does the chewing of food really accomplish?" might be answered at this point. Flrst, the food is broken up, as already stated, into fine particles so that the digestive process of chemical character can be easily carried on. One of these latter processes is normally accomplished in the mouth. The saliva, which is secreted by several glands located in the walls of the mouth cavity, contains a chemical substance which is called ptyalin. This product acts upon cooked starch, changing it to a sugar by the name of maltose. Starch, as such is not suitable to the body's needs, and must be changed to a sugar called glucose before it can be utilized. The process involved is one of the splitting up the large starch particles into smaller ones. Saliva does not carry the starch to the glucose stage, but it does bring it down to the maltose, which is only one step from the finished product, glucose, finally absorbed into the blood. The final step is brought about by another chemical agent in the small intestines.

When food is swallowed in large chunks or masses and the milling function of the teeth is poorly carried out, very little of the starch content of the food is converted to sugar in the mouth. Since starch is a large constituent of the diet, the whole process of digestion is delayed until the food reaches the intestine, where starch is again attacked by the agents of digestion there found; but the process will probably never be so complete on account of failure to use the milling process which the teeth supply.

Failure to properly chew one's food generally calls for excessive quantities of liquid to wash the large masses into the stomach. This large admixture of fluid dilutes the digestive juices to such an extent as to hinder markedly the digestive process in both the mouth and stomach.

Chewing increases the secretion of saliva, thus aiding the swallowing process. and at the same time gives opportunity for the saliva to act upon the starchy elements of the food, as previously mentioned. The thorough mixing of the saliva with the food will also allow it to act longer upon the starch even after entering the stomach.

Masses of food which are hard and not easily broken up by the digestive work of the stomach and small intestine may pass through the entire tract to the lower bowel, and there undergo unfavourable decomposition under the influence of bacteria which are constantly present in that portion of the digestive apparatus. The proper mastication of food has an influence upon the entire digestive process.

The Problem of Marketing

In *The Bengal Co-operative Journal* occurs the following :

In pursuance of the Government of India's Resolution of May 4, 1934, Mr. Livingstone, formerly, Marketing Expert of the British Board of Agriculture, was appointed sometime ago to conduct a 'big drive on the question of marketing.' Recently a *communique* has been issued by the Govenment of India which provides for the appointment of several provincial marketing officers, the inauguration of marketing surveys, the appointment of special committees for staple crops and also for carrying out work on grade standards. The scope of the survey will include the following : grading, market information, special organization for marketing of perishable commodities, planning of production according to quality and demand, regulated markets and produce exchanges, warehouses, transportation and export methods. The basis of study will include (a) crops—(i) cereals, (ii) oilseeds, (iii) fibre crops, (iv) plantation and special crops, (b) animal products—(i) dairy products, (ii) livestock, (iii) live stock products (hides and skins, wool, etc.). As soon as these market surveys are completed, a programme of development will be followed which will include demostration, propaganda and distribution of information, legislation regarding standardization and market regulation and promotion of marketing organizations.

The scheme is an ambitious one and the work ahead stupendous. One misses, however, any mention of the question of the esfablishment of regulated markets, without which the ryot can hardly reap the full benefit of all the preliminary study, spade-work

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and propaganda. The Linlithgow Commission, it may be noted, observed that the establishment of regular markets must form an integral part of any plan for agricultural development. Mr. Livingstone has recently made some pronouncements on the subject. The reports of these, published in the press, do not indicate that co-operative marketing is likely to play an important role in his scheme. This seems anomalous in view of the reference to the need for co-operative marketing even in the Government Resolution of May 4. We hope that a study of local conditions will convince Mr. Livingstone that in India the ryot can secure the advantages of orderly marketing only if the co-operative machinary is properly developed and utilized.

Iron pillar of Dhar

The following is taken from *Tisco Review* :

The following is from a note on archæological excavations during 1932-33 by the Director-General of Archæology :

The Iron Pillar at Dhar, Central India, is one of those large-sized products of ancient Indian metal workers which have excited the unstinted admiration of modern metallurgists. It is now broken in three pieces measuring together more than 43 feet in length, and some writers believe that a fourth piece of seven feet in length has been lost sight of. The date and purpose of this interesting monument had remained uncertain, and the pillar had been assigned by some to as early a date as the Gupta period. This controversy is now set at rest by an inscription of the time of the Paramara King Bhoja of Dhar (A. D. 1018-60), fragments of which have been put together in Kamal Maula's mosque at Dhar, which occupies the site of a grammar school established by that king. One of the verses of this inscription refers to the setting up of a pillar to which could be tied the elephant of victory fettered with ropes in the form of the rays of the sharp sword of Bhoja.

The only pillar at Dhar answering this description is the Iron Pillar, and it may have been erected to commemorate Bhoja's victory over the neighbouring powers, including the Chedi ruler Gangeyadeva of Tilangana or Trikalinga. The Hindustani proverb *Kahan Raja Bhoj kahan Ganga Teli* appears to refer to this victory of Bhoja.

—

The Tata Iron Works

The same paper writes:

The following few facts will help our readers to visualize the magnitude of India's key industry :

(1) The Works of the Company at Jamshedpur are the largest and best equipped in the British Empire.

(2) Sixteen trains steam into the Company's Works *daily* bringing in raw-materials for the manufacture of Iron and Steel.

(3) Eleven trains steam out of Jamshedpur *daily* to distribute the manufactured products of the Steel Works to all parts of India.

(4) Nearly one-third of the total public traffic of the Bengal-Nagpur Railway is provided by the Company.

(5) The capital of the Company is contributed by various provinces of India including Assam, Bengal, Bihar and Orissa, Bombay, Burma, Central Provinces Panjab, United Provinces and the Indian States.

(6) Over 20,000 people hailing from all parts of India are employed by the Steel Company.

—

Early Hindu Colonization in Malay Peninsula

Dr. R. C. Majumdar writes in *The Indian Review*:

Actual remains of early Hindu civilization in the Malay Peninsula are not altogether lacking. Mr. Evans has described the remains of a Hindu temple and a few stone images at Sungai Batu estate at the foot of Gunong Jerai (Kedah Peak). Mr. Evans observes :

"Let us now consider what some of these specimens indicate. They certainly show that some early inhabitants of Sungai Batu were Hindus, and worshippers of Siva or related deities, for we have obtained images of Durga, (?) Ganesa, the Nandi on which he rides, and one of the yoni, always associated with the worship of Siva or with that of deities of the Siva Group."

Unfortunately it is impossible to assign even any approximate date either to the shrine or to the images. But the remains of a brick-built Buddhist shrine discovered in its neighbourhood, at Kedah, may be dated approximately to the fourth or fifth century A.D. on the strength of a Sanskrit inscription found in it. Similarly remnants of pillars which once adorned some Buddhist temples have been found in the northern part of Province Wellesley. These also may be dated to the fourth or fifth century A.D. on the strength of inscriptions engraved on them. Pillars of approximately the same date have been discovered also in the eastern side at Chaya, north of Ligor. Recently a gold ornament bearing the figures of Vishnu on his Garuda has been unearthed at Selinsing (Perak), and, in a hole left by the roots of a fallen tree, a Cornelian Seal engraved with the name of Hindu prince Sri Vishnuvarman, in characters of the 5th century A.D.

More interesting light is thrown upon the Indian colonization in Malay Peninsula by the large number of inscriptions which have been discovered in different parts of the country. These inscriptions are mostly too fragmentary to yield any complete sense, but they lead to very important conclusions. They are written in Sanskrit and in Indian characters of about the fourth or fifth century A.D. Two of them distinctly refer to Buddhist creed and thus prove the spread of Buddhism in the region. As to the distribution of the inscriptions, seven of them were found at Tokoon in the centre of the Province Wellesley, four of them in the northern part of the same province, one at Kedah, one at Takuapa, three at Ligor and one at Chaya, On the whole, therefore, these inscriptions clearly testify to the fact that the Indians had established colonies, in the northern, western and the eastern side of the Malay Peninsnla by at least fourth and fifth centuries A.D. The palaeography of the inscriptions shows that the colonists belonged to both Northern and Southern India.

—

Aryan Synthesis and Dravidian Culture

Prof. S. V. Venkaleswara writes in *The Aryan Path*:

Aryan talent for synthesis is evidenced by the incorporation of these elements. Baudhayana and Apastamba, among the early givers of sacred laws, relax the rigour of Aryan exogamy and permit cousin

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

marriage in South India, copying the Dravidian system. They also introduce new kinds of marriage; among them is marriage by capture, which is distinctly Dravidian. Burial was allowed to the Brahmins of Malabar, and was preferred in cases of contagious diseases like the pox. The dog was permitted within the sacred enclosure at the *Vaisadeva* rite. The prejudice against the use of mud pots died away and these found their way into temples and near images. Evidence of a duodecimal reckoning is found in the *Panchavimsa Brahmana*, with multiples carried 32 times. The Aryan and the Dravidian peacefully co-operated in the foreign commerce of India by sea. Some of the Indian exports had Aryan, while others bore the Dravidian, names assigned to them in India. If muslim (*sindhu* in Babylonian) and axe (*parasu, pilakku* in Assyria) belong to the former category, the peacock (*tohai, tukheim* in Hebrew) and rice (*arisi, oryza* in Greek) belong to the latter. Lastly, the worship of the goddess crystallized into *Durga Puja* and *Sri Vidya*.

Aryan genius for sublimation and transvaluation of values is evidenced by the philosophical and symbolical significance attached to crude conceptions in iconography. One principle of Aryan ethics is the extirpation of vice or misfortune, not by combating it but by meditating on the contrary virtue or benevolence. The Dravidian Goddess of the Pox was therefore renamed Sitala (Goddess of Coolness); coolness in contemplation served to mitigate the rigour of the heat and dryness which is felt by the pox-stricken patient. To the Goddess of Divine Wrath, who was Dravidian, was attributed a mild and milky aspect as of the mother who appeased the hunger of Sambandha and Thayumanavar in Aryo-Dravidian hagiology. Aryan emphasis on the spirit and on the transitory nature of the body, relaxed the attention bestowed on the burial, as evident from a contrast of the simple burial of historical times with the meticulous preservation of the corpse in hermetically sealed earthen jars of the prehistoric period. Dravidian festivals were retained, but they were affiliated to the Aryan ones founded on astronomical or planetary mythology. Non-Aryan cults based on the phallus were sublimated into the encyclopædic system of rite, religion and philosophy known as Saivism. Dravidian scripture in the Vernacular (*Nalayira prabandham*) was recognized by Vaishnavism as a mere translation of the essence of the Vedas. The tantric cults were endowed with symbolic content and made to yield high philosophy.

—

Education and Indian Life

In a thoughtful paper in *Educational India* Mr. H. N. Mukherjee writes:

The movement for all-round educational progress must, therefore, ally itself with a movement for fundamental changes in our social and economic system and attitudes. There must be a clear-cut social purpose behind our educational movement, for without it nothing worth while can be achieved. Our educationists often specialize in certain aspects of educationl work; their field of action is inevitably circumscribed—which, in most cases, is a good thing. But their vision is limited—which is a danger to be avoided. They would forget the relevance of their work to the wider problem; they would miss their affiliation to the general movement. On the other hand, there are many among our educationists who would pride themselves as practical men; they would check the zealots, the hot-heads, who are prepared to pay the cost of their work even though it may frighten away more timorous souls. But such practical men—and the specialist, as well—would slowly wrench from those in authority only a few niggardly, irritating reforms. They shall not emphasize the claims of the immense majority of our people, which has been curelly and persistently denied, in order that the social hierarchy shall not be disturbed. They shall never enlist under their banner men and women who will work with little thought for the puny interests of themselves and their class, but with the over-mastering desire of helping, in however humble a fashion, the building of a new society where the claims of all are not only abstractly recognized, but actually served. No present-day educationist worth the name would deny, if he was pressed to give a direct answer, that there is generally among teachers in india a miserable lack, even though it is understandable, of educational idealism. We cannot harness the idealism of our people to educational reconstruction if it does not go hand in hand with a radical transformation of our social, economic and political life. There must be, I repeat, a conscious social purpose in any educational movement that hopes to be really successful.

WHOM WILL JUTE CROP RESTRICTION BENEFIT ?

By BHUPENDRA LAL DUTT

"RESTRICT your cultivation of jute"—this was the piece of advice thrust upon the Bengal cultivators from many a Congress platform during the hot days of non-co-operation. The elders refused to pay any heed to what they took to be inspired dabbling in matters economic by political demagogues. When the political tongue of the Congress was gagged, the economic tongue, too, was silent. But the Bengal agriculturist could hardly enjoy any respite. The Government of Bengal took up the cue where the Bengal branch of the Congress had left it. The agriculturist listened to the counsel of the Government with no better attention. The result has been expressed thus in the *Annual Report of the Department of Agriculture, Bengal, for the year 193-132* :

> Jute—Inspite of active propaganda, the area and out-turn of the crop were *higher** than in the previous year.

The Bengal Legislative Council was alarmed at the threatening economic crisis and in its sitting of the 21st February, 1932, a resolution to the following effect was passed :

> This council recommends to the Government that a Committee consisting of official and non-official members of the Council and experts be appointed to make a systematic examination of the present economic depression in Bengal and to make suggestions as to what temporary and permanent measures may be taken to alleviate the present distress and ensure a steady economic progress of the people of the Presidency.

Thanks to the Mont-Ford Reforms, the Indian presidencies and provinces are happy families,

> governed, in relation to reserved subjects, by a governor-in-council, and in relation to transferred subjects (save as otherwise provided by this Act) by the governor acting with minister under this Act. †

This resolution concerning 'present economic depression of Bengal' was treated as one concerning a transferred subject and was 'carefully considered' by the Government of Bengal (Ministry of Agriculture), which

> came to the conclusion that the appointment of such a committee to conduct a general enquiry of the nature contemplated in the resolution, viz., "to make a systematic examination of the present" economic depression in Bengal, would serve no useful purpose.

But the Government was not slow to realize that

> the fall in the price of raw and manufactured jute is one of the primary causes responsible for the acute depression of Bengal,

and appointed a committee with the following terms of reference :

> (1) the question of regulation of the production of jute ;
> (2) the marketing of jute, including the establishment of regulated markets, and the supply of market informations in a suitable form to the producers ;
> (3) The creation of a Jute Committee for the province of Bengal on the lines of the proposed Central Jute Committee and the minimum amount required to finance such a Committee ;
> (4) the extent to which other materials have displaced jute and the likelihood of further substitutes being found in the near future ;
> (5) the possibilities of making any other economic use of jute to an extent that might relieve the present situation.

The Committee worked for over six months and the Chairman laments :

> From the beginning, it was obvious that there were considerable differences of opinion in respect of the first three terms of reference to the committee, but it was hoped that it would be possible to compose the differences sufficiently to bring the opinions within the compass of a single report.* * *
> Attempts to reconcile these conflicting attitudes having unfortunately failed, it was regretfully decided, after discussion, that the only course open was to write two separate reports, embodying the respective views of the two groups into which the members were divided.

In fact we have three, not two, reports before us, as one of the members refused to join any group and preferred to write a separate one himself. The Committee were originally directed to submit the report by May 1, 1933, but extension was given later on to the 10th August, 1933. After full thirteen months, on the 20th September, 1934, a *communique* was issued by the Government of Bengal, Agriculture and Industries Department. It begins with the following lines :

> The Government of Bengal have for some time viewed with anxiety the serious position to which the low price of jute has largely contributed and amongst the terms of reference to the Jute Enquiry Committee the first was "the question of the regulation of the production of jute" with a view to improving the price paid to the cultivator. The report of the Committee upon this term of reference has now been considered by the Government.

---

* Italics in this and the following extracts are mine.
† Government of India Act, 1919. Sec. 46.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We confess, we cannot congratulate the Government on these lines. Procrastination is not a virtue, even with the Government. It took thirteen long months for the Government to pronounce their decision on one point of reference out of five. We do not know how many months will elapse before the Government publish their opinion on the other four points. By the way, are these points considered independently of one another ?

(2)

It would be rash to indulge in conjectures on the attitude of the Government when the points of reference were determined and the question of regulation of production was placed first. The *communique* runs :

> With one dissentient the Committee recommended against measures for compulsory restriction of the crop under legislative enactment and *for the crop of 1935* Government accept the opinion of the committee on this point. They also accept the recommendation that the measures adopted during the past two or three years for encouraging a voluntary reduction of cultivation shall be improved and intensified.

These lines, if they mean anything, mean that the Government refuse to accept the almost unanimous opinion of the Committee appointed by them and to abandon the principle of "compulsory restriction of the crop under legislative enactment." The Press Note on the scheme for reduction of the cultivation of jute in 1935 makes the interpretation clear when it says that

> The scheme does not *at present* include legislative enactment to enforce a reduction in the area under jute.

The lines from the *communique* as well as the Press Note sound like a challenge to the Bengal jute-growers that, if they fail to give a satisfactory response to the Government scheme, legislation must follow.

Further, Mr. A. C. Porter, Development Commissioner, Bengal, is reported in newspapers to have said that

> The scheme of compulsory restriction could not be adopted for the next season since *it was not possible to pass the necessary legislation within such a short time.*

Finally, we have it on the authority of the Hon'ble Nawab K. G. M. Faroqui, Minister of Agriculture and Industries, that

> "A restriction by legislation is *neither possible nor practicable at the present moment.*"

Now, with all these before us, will it be very wrong to say that the Government have committed themselves to the principle of "compulsory restriction by legislation" and the voluntary restriction scheme is a mere fore-runner to it ?

(3)

The Press Note claims for the Government that the scheme is

> a *response by the Government to public opinion* which has expressed itself *unanimously* in favour of effective measures for restricting the crop.

To a foreign reader, it would appear as if a plebiscite on the jute question had been held, or at least, an election had been fought on this question and an obliging Government has, in a truly sportsmanlike spirit, submitted to public opinion. Nothing of the kind.

The Jute Enquiry Committee was constituted with thirteen members. The President was a high Government Official. The Bengal Chamber of Commerce, the Indian Jute Mills Association, the Bengal National Chamber of Commerce, the Indian Chamber of Commerce, the Muslim Chamber of Commerce had each a representative to guard the respective interests. Dr. J. C. Sinha, Professor of Economics, Presidency College, must have been taken in for his technical knowledge. The Minister had three deputies in the Director of Agriculture, the Director of Industries and the Registrar of Co-operative Societies. Thus there were only three seats left. One was allotted to a retired Divisional Commissioner, the second to a lawyer practising in a district which has very little area under jute cultivation. A seat was found for a Doctor of Law practising in the highest judicial court in the Presidency and he was introduced as Vice-President, Bengal Jute Growers Association as if to create an impression that jute-growers were not without their spokesman on the Committee. The questionnaire was distributed to

> the Bengal Chamber of Commerce, the Bengal National Chamber of Commerce, the Indian Chamber of Commerce, the Muslim Chamber of Commerce, the Marwari Chamber of Commerce, and various other organizations connected with the jute trade. Others receiving the questionaire were Commissioners of Divisions, Collectors of Districts, Chairmen of District Boards, prominent members of the Union Boards, Co-operative organizations, employers of labour, leading gentlemen in jute districts, etc.

Thus we see that the questionnaire was not a public document available to any one who might care to express his opinion. Any member of a Union Board or a gentleman in jute district, who had not been favoured with a copy of the questionnaire might be silenced by saying that he was not a 'prominent' or 'leading' man. However,

> Replies were received from 119 persons, and Commercial and public bodies.

The Enquiry Committee spared no pains to be in touch with public opinion. A Sub-Committee was formed and it made a tour

> between the 8th and the 15th April, 1933, in course of which Narayangunge, Dacca, Mymensingh, Serajganj and Rangpur were visited.

We do not desire to place before our readers a railway map and a railway time-table to show how many miles this august body travelled and how much time was occupied in travelling.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Sub-Committee performed a feat when during these eight days (inclusive of the time spent in travelling) in these five places (all District and Sub-divisional Headquarters and no rural area) they

> examined representatives of mofussil jute agencies, District Board Chairmen, Presidents of Union Boards, dealers in jute and cultivators.

We find no mention of the number of persons of each interest examined in these Mofussil centres, though mention has been made that

> Altogether 32 persons were orally examined in Calcutta.

Are the opinions of the Enquiry Committee constituted as such or of the witnesses requisitioned to appear before them to be recognized as *public* opinion ?

Since the Government took upon themselves the task of suppressing the Civil Disobedience Movement and lavishly used section 144 I. P. C., public meetings have been seldom held, and we have not heard of any public meeting in any part of Bengal, requesting the Government to launch a Scheme of Restriction of Jute Cultivation. Then there are Indian-owned newspapers in Bengal. We are accustomed to hear them described as mouthpiece of the discontented middle class. Correspondence and notes have been noticed in the columns of some of them in support of restriction. Do the Government now hail them as expressions of public opinion ? Lastly, there is the Indian National Congress which first raised the cry of restriction. But much water has flowed down the Ganges since that body first advocated it.

Government have peculiar ways of ascertaining facts and one may think that this official version of the unanimity of public opinion in favour of restriction of the cultivation of jute is as accurate as the official jute forecast.

(4)

The Press Note says that the Government scheme

> aims at the organization of intensive propaganda on a provincial scale *to induce* the cultivator to restrict his sowing of jute *in his own interest.*

We fail to understand why the question of inducement arises at all, if the Government action is a response to the unanimous public demand for restriction. Soon after the publication of the Government *communique*, Mr. B. R. Sen, I. C. S., Publicity Officer to the Government of Bengal, invited representatives of several Calcutta newspapers to a drawing-room conference when Mr. A. C. Porter, Development Commissioner, explained the details of the scheme. Under the sub-heading of "Executive Pressure on Black Sheep," the *Amrita Bazar Patrika* of Oct. 2, 1934, reports:

> After some minor discussions a representative of the Press opined that any attempt at restriction by propaganda alone will be useless since there are a few "black sheep" in every village who refuse to listen to any good advice and their examples are invariably followed by the rest of the villagers. In reply to this Mr. Porter definitely assured the Press representatives that the executive officers of the Government will never fail to adopt suitable measures in order to check the mischievous activities of the 'black sheep'.

A response to the unanimous public demand requires "suitable measures" to be adopted ! Again, a Bengal peasant, simple and sincere as he always is, understands legislative prevention and accepts it with calm resignation. We do not know how he will accept the "executive pressure".

If October opened with this Press conference, it closed with the conference of the chairmen and representatives of district boards. Before these leading gentlemen of rural Bengal the Hon'ble Minister for Agriculture was pleased to say :

> In the past, sporadic propaganda had been carried on in the villages, and the work had been more or less confined to the distribution of propaganda pamphlets and literature, leaving it entirely to the cultivators as to the quota of individual restriction. It was entirely the choice of the grower to reduce his cultivation by any amount or not at all.

Does the Minister mean to say that the grower will no longer be allowed this liberty of choice ? He proceeds to say that

> if all efforts, official,and non-official, are made to bring home to the growers that their (growers') interests lie in the immediate restriction scheme, there will be very few who will think of disregarding the strong public opinion that it is *attempted to create* in favour of the restriction scheme : and it is in that connection that Government look upon you, chairmen and representatives of district boards, to help the propaganda and utilize all your resources, influence, tact, judgment and knowledge to see that the public opinion becomes effective so that the growers *may not dare to disregard it.*

The Hon'ble Khawaja Sir Nazimuddin, Member of the Executive Council, in the same meeting said :

> If public opinion is *created* that there should be a restriction on the production of jute, it becomes the duty of every one that he does not grow more than his own quota ; and if he does, he becomes the black sheep of the village.

The Hon'ble Sir Bijoy Prosad Singh Roy, Minister for Self-Government, addressing the same band of leaders of rural public opinion, said :

> Now, you are expected to *mobilize* public opinion to carry on vigorous propaganda with conviction and courage, and to impress upon the people in the mofussil, and the agriculturists who have not yet learnt to think for themselves, that it is their duty in common interest to reduce the area of jute cultivation as much as they can.

Now, it is for the readers to judge whether the Government action is a response to unanimous public opinion or whether the Government are making vigorous attempts to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reate and mobilize public opinion to put into tion a principle to which, for reasons best nown to them, they stand committed.

(5)

It is no surprise that in a land which is llowed a mere shadow of self-government, the linister for self-government is of opinion that griculturists 'have not yet learnt to think for emselves'. But great men do not always think like. The Minister for Agriculture, who comes om a jute-growing district and had many an ccasion to move among the agriculturists before is joining the Governor's cabinet, holds a ifferent view.

> The Bengali cultivator is no fool. He has faced and survived difficulties for countless centuries and and is capable of taking a long-sighted view when the true facts of the situation are placed before him by those whom he trusts.

What is really surprising is that this onourable gentleman who finds himself in the egislative Council mainly with the votes of the griculturists—and this proves that they trust im—has preferred to engage himself in creating nd mobilizing public opinion 'that the growers ay not dare to disregard it' before approaching hem direct with the 'true facts of the situation'.

Restriction of cultivation of jute, it has been epeatedly asserted, is to the grower's own interest. n this connection the following excerpt from the eading editorial of a local Anglo-Indian paper ill be interesting reading :

> The other menace is the serious competition of foreign jute manufacturers. It is said that in recent years many mills have sprung up, in Central and South-Eastern Europe and in Japan for example. These mills have more modern machinery than Bengal mills, they are hampered by no restriction scheme of their own, and they profit in two ways from the Indian restriction scheme. This scheme tends to keep up the price of Calcutta's manufactured jute exports, and therefore to facilitate the foreign millowners in the task of underselling Calcutta. And secondly the restriction scheme is of the one-legged variety only. There is a restriction on output of manufactures but there is none on the growth of the crop. The cultivators grow freely, the Bengal mills, governed by their own restriction scheme, cannot take more than a certain percentage, the rest is flung at the heads of the foreign millowners. It must be sold for what it will fetch, and the export tax is of little avail in keeping up the price when there is a glut. Theoretically in the case of a monopoly the foreigner pays the tax but when Bengal's jute-growers are unorganized and have to compete against one another to get rid of their crop in foreign markets the export tax does not inconvenience the foreigner very much. Japan has no more difficulty in manufacturing Indian jute and underselling Bengal than she has in manufacturing Indian cotton and underselling Bombay. Moreover, although it is recognized by Bengal manufacturers that unregulated growth of jute is an evil both for the cultivator and in the long run for the industry itself, and tends to make it the unhappy hunting-ground of speculators, in practice the manufacturer is often not averse to a situation the immediate result of which is that he gets his raw material cheap. In so far therefore as he does nothing to promote a crop restriction scheme he may be said to be the aider and abetter of his foreign competitor, who fights him with all his looms, and not with a percentage only.*

Here, we believe, a big cat is out of the bag. Here appears a powerful party that requires restriction of jute crop for its own interest.

Reuter is responsible for the following news cabled from London on July 26, 1934 :

> Far-reaching developments in connection with the jute trade of Calcutta and Dundee are pending, according to the *Financial Times*.
>
> Dundee traders have an important scheme, for which they are seeking Calcutta's co-operation, believing that, in the face of foreign competition, the producers of both centres should combine in persuading the British and the Indian Governments to impose an additional export duty on raw jute from India in parts not within the British Empire.
>
> As jute is produced within the Empire, it is contended that Empire manufacturers should have preference over foreign competitors. The unsatisfactory condition of trade both in Dundee and Calcutta has influenced manufacturers in these centres towards co-operation.

Here the bag has let loose another big cat. The Bengal millowners and their compatriots in Dundee are of opinion that none but themselves should have easy entry into the jute market of Bengal. The Dundee traders are moderates and are satisfied if non-British Empire manufacturers are pushed to a disadvantageous position by subjecting them to pay higher export duty, but the Calcutta manufacturers are extremists and do not like the idea of sharing Bengal market with others.

> It is an irony that while the ryot gets no profit from his labour and *looms are idle along the Hooghly other lands reap the benefit.*†

And it is to drive out these "other lands" from the jute market that the restriction is advocated in some quarters, and for this government action is thought necessary.

> That restriction of jute growing is necessary *if the industry is to return to health* and that Government *must* and only Government can insist on this restriction is an article of faith with a large section of the general public.‡

This large section advocates restriction of jute growing with a view to excluding a large section of purchasers. "The Bengali cultivator is no fool"; he need not be told how this exclusion of his purchasers will further his interest.

(6)

It is far from us to accuse the Government of Bengal (Ministry of Agriculture) of any

* *The Sunday Statesman*, April 29, 1934.
† & ‡ *The Statesman*, Sept. 22, 1934.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

complicity with the Bengal Millowners or Dundee traders in propounding their Scheme. Even accepting, for argument's sake, that such a complicity does exist, no grower should reject the restriction scheme for that reason if he is convinced that such a restriction will help, even to a small degree, his economic rehabilitation. The Government *communique* does not hold out any greater hope than that.

> If each cultivator complies with it, there will be grounds for a reasonable expectation of some improvement in the demand for and in the price of fibre.

These are not the words of one who is confident that one's action will bring about the desired result. "Grounds for reasonable expectation" are not, we fear, sufficient reasonable grounds to put "executive pressure" upon the cultivators to restrict the cultivation of their favourite and only money-crop. The Press Note accompanying the *communique* is silent on this important point. Mr. Porter has not explained it before the Press representatives. Even in the district board conference the Minister had no word on it. When this question was raised by Mr. Jitendra Lal Banerjee, Khawaja Sir Nazimuddin is reported to have said :

> This is the most critical point. Amongst all the people in the jute trade, both millowners and dealers and others, who have given their best thoughts to this problem, there is no difference of opinion on this question that by the restriction of production, price will go up. This is not disputed at all by anybody.

There is again the *dohai* (दोहाई) of unanimity of opinion ! The Hon'ble member goes on to say :

> At the present time, the mills in Bengal hold practically a year's supply of jute in their hands. On the other hand, the Dundee mills have practically got no stock in hand. Therefore, if we can reduce the production of jute, there is every chance that price will go up.

Whether the conclusion is justified by the premises the honourable gentleman puts forward is not undisputable but the one thing that appears to be beyond dispute is that it is the Calcutta and Dundee millowners—and none else in this vast world—who should occupy our vision when we are required to think of purchasers of jute.

Is Bengal jute cultivated, or to be cultivated for Calcutta and Dundee millowners alone ? Is the Bengal grower so to restrict his cultivation that there may not be any surplus for any purchaser besides the Calcutta and Dundee millowners ? Granting that he does so, will this restriction raise the price ?

We have been taught that when the supply exceeds the demand, the price goes down. Inverse of a theory is not always true. It would be rash to deduce from this well-established theory that when the price of a commodity goes down, the supply is necessarily in excess of the demand, and, consequently restriction will enhance the price. In the past restriction failed to create that effect.

Year	Area (in thousand acres)	Yield (in thousand bales of 400 lb.)	Calcutta price per bale (in rupees)
1922	1800	5408	87-13-5
1923	2788	8401	68-5-10
1924	2770	8062	75-13-5
1925	3115	8940	119-9-9
1926	3847	12123	98-11-6
1927	3374	10188	76-6-6
1928	3144	9906	75-0-11
1929	3415	10335	71-4-0
1930	3492	11205	50-4-9
1931	1859	5535	37-11-10

This table for ten years contradicts, as far as jute is concerned, the theory—"the less the product, the higher the price". In 1926 with the greatest acreage under cultivation and the biggest yield, the price was as high as Rs. 98-11-6, second only to Rs. 119-9-9 of the previous year. In 1927 and 1928 the fall in the acreage, and consequently in the yield did not increase the price, rather it went down—proving false to the pet theory. Again, in 1931 the acreage was nearly half of, and yield less than half of, that of the previous year, but the price did not increase ; on the other hand, it decreased by nearly 26 per cent.

(7)

For reasons best known to them, the Government of Bengal have thought it fit to reject the Bengal Legislative Council's recommendation to appoint a committee 'to make a systematic examination of the present economic depression in Bengal'. Nor did they institute a public enquiry to discover the causes that led to the fall in the price of raw jute. Nor are we told of any departmental enquiry. But we have a Press Note published in May last which gives the opinion of the Imperial Council of Agricultural Research. It says :

> There is no question in this case of the depressing action of the principle of economic nationalism, for no country other than India is able to produce jute and even in India 90 per cent of jute is produced in Bengal, the adjacent provinces of Bihar and Assam.
>
> Nor is it a question of synthetic substitutes replacing jute, as they did in the last century in the case of indigo and as they are threatening to do in the present century in case of lac.
>
> * * * *
>
> In the face of the steady increase in the prices in the thirty years from 1900, it seems difficult to maintain that there has been over-production in the past.

Where then lies the cause of the depression ? The Press Note says :

> The real cause of the decline in export of jute is that international trade in agricultural produce has shrunk since the depression and in the absence of commodities to transport there is no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

demand for containers. To use a common analogy, if people wrote fewer letters stationers would have fewer envelopes to sell.

We quite appreciate the analogy of the author of the Press Note. But we may be permitted to remind him that fall in the consumption of envelopes may not necessarily bring in the fall in the demand for paper which has a hundred other uses. This analogy does not hold good unless he declares that a container is the only thing for which jute can be utilized. Indeed in some quarters there are persons who think that jute is, or should be, cultivated for making a container only for commodities for transport. Even Dundee manufacturers do not think so. The Dundee Chamber of Commerce published 'A Tree of Jute"—a chart to show the various uses of jute. It cannot be said that the Tree is complete. How many mills, here on the Hooghly or in Dundee, are engaged in manufacturing all these articles ? There is no denying the fact that

> For many years now the jute industries have been content to plod along manufacturing their jute into the same articles year after year. *
>
> We are also told that
> there are far too many "conservative" firms, which term generally means that they are backward, distrustful and hostile to all progress in business.... Progress which appears to all reasonable businessmen and producers an absolute necessity and a fundamental rule, is regarded by the backward part of the industry as "dashing" or "modern" in the extreme.

It is a sad day for an agriculturist when he is told to restrict his cultivation of raw material because the manufacturer does not like to be "modern" and prefers to remain "conservative", "backward, distrustful and hostile to all progress" and persists in manufacturing "the same articles year after year."

Here, in his own land, the Bengali cultivator is advised to restrict his cultivation of jute as "there is no demand for containers" but in other lands there are already cries for suitable substitutes for jute and paper and other containers are gradually capturing the market.

* *Jute*, 1931.

SCHEME FOR AMELIORATING RURAL INDEBTEDNESS IN BENGAL

By MATISWAR SEN

THE problem of agricultural indebtedness is perhaps one of the most pressing economic questions of India today. In this paper I shall attempt an outline of a general scheme for a possible adjustment in Bengal, with reference to the Government enquiry on debt reconcilation referred to the Economic Board. Obviously each of the twenty-six districts of Bengal, with their varying local conditions, would require special study before the scheme could be worked out in detail and put into operation in any particular district, but for the province as a whole I put the following alternative methods for ameliorating the unhappy condition of the agriculturists.

(1) An attempt may be made to improve the existing credit and marketing agencies of the Mahajans.

(2) For the present agencies, we may substitute :

(a) A Credit Agency,

(b) A Commodity Marketing Agency, with storing arrangements in consuming markets to meet consumers' demands,

(c) An Organization for Storing Surplus Commodities in Rural Areas to protect from seasonal slumps in commodity prices.

These credit, commodity marketing and storing agencies should be so planned as to permit their gradual conversion into organizations of co-operative credit, co-operative commodity marketing and co-operative storing.

(3) In place of the suggested Commodity Marketing Agency, but functioning with the proposed Credit Agency and Organization for Storing Surplus Commodities in Rural Areas, a Sales Depôt for handling all salable commodities of the agriculturists may be organized throughout rural Bengal. In this case, as above, a co-operative basis should be the ultimate aim.

The Amount and Nature of Rural Indebtedness in Bengal

For the present purpose I am basing the following notes on the *Report of the Bengal Provincial Banking Enquiry Committee*, published in 1930.

(1) The agricultural indebtedness for the province is estimated at Rs. 100 Crores, of which (a) 44 per cent is accounted for by mortgage

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

transactions, but according to the Report, 62 per cent represents long-term credit, *i.e* ., including a portion of debt secured by simple bond. (b) co-operative credit accounts for 4·33 per cent. (See Table V of the *Annual Report on the Working of the Co-operative Societies in the Presidency of Bengal, for the year ending 30th June, 1933*, in which the amount due is given as Rs. 4.33 Crores. (c) The paddy loan and other minor sources are estimated at 7 per cent. (d) The balance of debt may be assumed to be secured by simple bond.

As a result of the prevailing economic crisis, the mortgage percentage of the loan has been increase and we cannot be far wrong in believing that it would show a 10 per cent increasing on the average for the various districts. We may then estimate the different sources of the loan to be : (*i*) mortgage, 54.0 per cent, (*ii*) simple bond, 34.67 per cent, (*iii*) co-operative, 4.33 per cent, (*iv*) paddy loan and other minor sources, 7.0 per cent.

(2) The value of land held by agriculturists in Bengal is estimated by the Bengal Provincial Banking Enquiry Committee at Rs. 690 Crores.

A careful study of available data on the extent of indebtendness of agriculturists in Bengal reveals that there are families having debts up to one year's income, two years' income, three years' income, and in excess of three years' income. Such families may be classed as (a), (b), (c), and (d) respectively, and it has been found that classes (c) and (d) together form more than a third of the indebted families, and classes (b), (c), and (d) more than one half of the total.

For purposes of comparison regarding the alarming growth of indebtedness among agriculturists in proportion to income, we may refer to the observations for Faridpur District, presumably based on figures for 1913 1914 of Mr. O'Malley. (See *Faridpur District Gazetteer*, page 57.) He says : "Only 6 per cent are seriously embarrassed, to the extent that their debts are equal to a year's income or more, and a quarter of these are hopelessly involved."

Unfortunately no definite data are at hand to show the prevailing rate of interest on the outstanding debt, but if we assume it to be as low as 20 per cent per annum, then it follows that classes (c) and (d), with outstanding capital debt up to or in excess of three years' income, must be paying at least 60 per cent of their annual income as interest on their indebtedness, and class (b), with an outstanding capital debt of two years' income, must be paying 40 per cent of its annual income as interest alone.

Since 1928 the fall in prices of commodities has effected a 50 per cent reduction in the income of agriculturists, while expenditure has fallen by 40 per cent. It becomes clear that the degree of indebtedness must be increasing from year to year, and that the Bengal agriculturists are sinking deeper into a morass from which they will never be able to extricate themselves without the assistance of the Government.

Relations of the Mahajans and Agriculturists

Without making any attempt here to discuss problems of freight, final grading of produce in Calcutta, in which millions of pounds sterling are invested, the possible development of Empire and other foreign markets, or the complex subject of exchange, all of which bear on agricultural prosperity, I shall restrict myself to the basic problems of credit and commodity marketing with reference to the local conditions in Bengal. And this means, to begin with, a brief survey of the existing relations between the agriculturists and the mahajans who act both as a credit and a marketing agency.

It is the mahajans who finance production, buy up the crops and market them, and at the same time supply the agriculturists with the necessaries of life. As such, they would appear to play a valuable and indispensable rôle in the economic life of the rural communities. But in view of the excessive interest charged on loans and the unfair compensation exacted for services rendered in marketing the produce, the mahajans must assume part of the burden of responsibility for the wretched position of the agriculturists.

In district towns, subdivisional centres, *bandars* and all other important market places, the mahajans have office godowns, and in jute areas they have jute press premises. They buy and sell the agricultural produce and industrial products of the region, which, after necessary gradings, they export to Calcutta and other large consuming markets. Their places also serve as shops for the piece-goods, salt, kerosene oil and other necessaries required by the people, including raw materials for cottage industries, imported by the mahajans. On the financial side, they advance money to the agriculturists, weavers and artisans on different terms of interest, depending on the urgency of the demand, the purpose for which the loan is taken, the resources of the family concerned and the honesty and efficiency of the borrower. These loans are given against mortgage or simple bond, or are entered in special books against advance sale of crops. For artisans, except those of highest standing, who are given longer terms of credit, loans are usually recorded in small account books, *chitta*, in which weekly transactions are set down. Generally the terms of such loan transactions are that the produce of the cultivators and the products of the artisans shall go to the mahajans, and with these the accounts of interest or of principal shall be partly or wholly settled. Sometimes the mahajans act as agents for rich merchants of Calcutta; sometimes they themselves employ their own agents in Calcutta.

Accepting the figure of Rs. 100 Crores as the probable indebtedness of the agriculturists of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bengal, and out of this deducting (a) accrued interest on the loan, (b) co-operative credit, and (c) some portion of paddy loan and other items for which agriculturists themselves are responsible, we may roughly take 80 Crores as the capital invested in the form of loans by mahajans among the agriculturists of Bengal. A like sum may be assumed, further, to cover the additional activities of the mahajans in the rural areas. While some of them have very little in loans but a large amount in stores, others reverse this arrangement, and my experience leads me to believe that a 50-50 investment in loans and other activities represents the average. The total investment, therefore, comes to something like Rs. 160 crores. If this sum draws interest or makes a profit of 20 per cent per annum, Rs. 32 crores are transferred annually from the income of agriculturists and artisans to the mahajans, in their capacity of middlemen and financiers, obviously an exorbitant price for the agriculturist to pay for the services rendered. Since under existing conditions this credit and these marketing services are themselves indispensable, however, the question of improving the unhappy lot of the agriculturists resolves itself into the development of some scheme whereby a reasonable rate of interest for loans advanced and a fair compensation for services in delivering commodities to the consumiug market will be assured.

First, as already suggested, we may organize and improve the existing agencies of the mahajans, stimulating efficiency, scaling down the indebtedness, and controlling rate of interest and compensation for services rendered in marketing commodities, particularly with regard to those smaller local agencies which customarily lend out money at the highest possible rate of interest and do all they can to depress the price of the village commodities over which they have a monopoly. Secondly, we may replace the existing agencies by developing new agencies, including a credit agency, a commodity marketing agency and an organization for storing surplus commodities in rural areas, through the joint effort of the Government and the people concerned, or through a purely Government organization set up for the purpose of adjusting and co-ordinating rural problems. Or, thirdly, a sales depôt may be organized, as a substitute for the commodity marketing agency, to function in connection with a credit agency and a system of storing surplus commodities to prevent seasonal price slumps.

Reform of the Present Credit and Marketing Agencies

If it is possible to reorganize the existing agencies of the mahajans on a satisfactory basis to meet the requirements of the situation, this method will involve the least drastic change, the least expense, and the least experimenting in new fields. To begin with, then, Government may hold conferences with the mahajans in all important centres in rural Bengal and in Calcutta, showing the urgency and importance of changes in the present methods of working and also indicating alternative methods for the Government to relieve the agriculturists in their present crisis and provide for their greater stability in future. In the event, that the mahajans are willing to undertake reforms, an attempt should be made to persuade them to develop their organizations gradually into co-operative institutions.

As a result of the proposed conferences, we shall know whether the existing agencies can be modified and improved to meet the needs of the situation. Of course the Government must be willing to hear and consider alternative suggestions to its own and to find out if jointly the Government and the mahajans can arrive at a satisfactory solution. The Government may have to make more than one attempt in this direction. But even if success is not complete, the fact that the Government is itself taking an interest in the working of the existing system will act as a check on certain abuses now practised by the mahajans. Thus the mahajans may be brought to realize that it will be better for them to accept the Government proposals, since otherwise they may be compelled to withdraw their present activities from rural areas altogether. If, however, we ultimately fail to develop a satisfactory programme with the mahajans, the second alternative must be considered.

A Credit Agency, a Commodity Marketing Agency and a Storage Organization

In this case the Government in co-operation with the agriculturists will create a long term mortgage and credit agency and an efficient and strong marketing agency, with an organization for storage of surplus commodities in rural areas to protect against seasonal price fluctuations. The marketing agency will be the guide and security for the credit agency, in regard to that portion of the agricultural loan which cannot be covered by mortgage. It will be found that when a commodity is marketed through an organized and efficient agency, the sales records act as an indicator and usually attract voluntary credit. Provided rural families agree to dispose of all salable commodities through the agency, credit can safely be extended to any family without land mortgage, and there should be no serious difficulty in realizing both the interest on loans and yearly part payments of the principal. This point may well be considered by the Government of India, Finance Department, which has recently pointed out the difficulties of extending mortgage credit help to agriculturists on account of complex land rights. Of course, when necessary, the credit agency might take hypothecation of the belongings of the debtor family, including livestock and standing trees.

Co-operative credit is best suited for agri-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

culturists. But co-operative activities have so far failed to expand in the most desirable fields. In spite of noble and able efforts the Government co-operative credit department has failed to solve the difficulties and has been compelled to suspend further expansion during the present economic crisis. Since the inception of the co-operative credit organization in India in 1904, a period of more than three decades has elapsed, and yet the credit department has not been able to cover any substantial portion of the total debt of the agriculturists of Bengal, as is evident from the fact that its loans constitute less than 5 per cent of the total outstanding indebtedness.

The recent success of the co-operative organization in the Sunderbun zamindari of Sir Daniel Hamilton is mainly due to the fact that an efficient commodity marketing organization has been developed, including a rice mill for the paddy growers, operated on a co-operative basis, and this organization again is the result of the direct attention and personal interest given by the proprietor. Further, the conditions prevailing in this area differ from those prevailing in the long settled rural areas.

The new co-operative land mortgage credit scheme, based on the Co-operative Land Mortgage Bank Limited, with its very suitable plan and by-laws, now offers the agriculturist facilities of which he should take advantage. Unlike certain other types of co-operative credit, in this only concrete security is dealt with, and hence no time need be wasted in bringing the plan into operation by an attempt to introduce unfamiliar methods of working. This credit scheme will, we hope, make rapid progress, with its comparatively low rate of interest, and will shortly cover a substantial portion of the outstanding mortgage loan in Bengal. At the same time I am afraid that without any substitution of existing marketing agencies by an agency such as that proposed, which will ensure a healthier and freer economic life to the agriculturists, it may not fulfil all the high hopes at present entertained for it.

We shall find, however, if I am not very much mistaken, that an agency or agencies functioning in a twofold capacity both to finance agricultural production and to purchase commodities, as well as to supply the principal necessaries of life to the agriculturists, will rest on a more intimate and friendly relationship than a pure credit agency. Such an agency will act almost as a commodity exchange place for the agriculturists, which is what they want. Because of this service rendered in the past, the mahajans have secured preference for their credit even with a high rate of cash interest as compared with co-operative credit. Undoubtedly the unlimited liability of co-operative credit is a drawback to its acceptance by many agriculturists but the existence of a co-operative commodity marketing agency will bring the co-operative credit agency into direct relation with the life activities of the agriculturists and do away with the present marked separation. Since, however, co-operative commodity marketing on a large scale is not immediately possible with the limited outlook of the agriculturists and their lack of education, it would appear advisable to begin with marketing, storing and credit agencies of a non-co-operative nature, having provision in their constitution for subsequent development along co-operative lines at such time as the community has been sufficiently trained to appreciate the advantages of the new system.

The different sources of the total loan (Rs. 100 crores) have already been explained. Speaking generally, the land held by indebted agriculturists in the different districts is of the same order. In some districts of Bengal the mortgage percentage is as high as 70 per cent or even higher.

A credit agency which could extend credit on the basis of mortgage and also assume responsibility for a large part of the agricultural debt now covered by simple bond or unspecified sources would serve the needs of the agricultural community far more effectively than the present Land Mortgage Bank with its limited operations. With the help and guidance of the proposed community marketing agency, there is no apparent reason why it could not function for the benefit of all concerned, including the Government, which would derive a suitable revenue from its operation.

It should be possible to increase the mortgage percentage of the agricultural loan and decrease the simple bond percentage, thus reducing the risk of extending credit. In the event of the formation and proper functioning of the proposed commodity marketing agency, I suggest as an objective that 67 per cent of the total loan, instead of the present 54 per cent, be based on mortgage, (now 62 per cent long term cridit), 11 per cent on co-operative undertakings, instead of 4. 33 per cent and only 19 per cent instead of the persent 34.67 per cent on simple bonds. As stated above, the agriculturists' land, however, is valued at Rs 690 crores.

I propose, then, the organization of a credit agency with a capacity to deal with at least 85 per cent of the total indebtedness of agriculturists in Bengal, or for Rs. 85 crores, for twelve years. This agency will have the following objectives:

(1) To extend long term credit to agiculturists on land mortgage ;

(2) To extend long term credit to agriculturists against security of the proposed commodity marketing agency for the portion of the credit required which cannot be covered by land mortgage;

(3) (a) To help to bring the present 54 per cent or as proposed 67 per cent mortgage loan into a co-operative land mortgage credit seheme;

(b) To help to bring the present 34. 67 per cent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or as proposed 19 per cent simple bond loan into a co-operative credit scheme;

(4) To maintain operation by

(a) Compulsory payments of interest from season to season in the year, with an extension allowance of five months;

(b) Compulsory small part payments of principal from season to season in the year, such parts to be fixed from time to time depending on commodity prices and debentures, with an extension allowance of twelve months.

Although a term of twelve years for repayment of loans will be guaranteed to agriculturists, the rate of interest will be subject to change every three or four years, since debentures will be floated for such periods. Thus opportunity will be afforded to change the working plan into one of co-operative credit, or co-operative land mortgage credit.

The question arises whether by bank rules advances can be made against the security of a marketing agency for the 19 per cent simple bond portion of the loan. It is an established fact that banks do advance short term money against hypothecation of pure crops. Since the new scheme will substitute a long term loan, not only the crops but the livestock and other assets of the family can be made to serve as security. Moreover, since the borrower's land will be mortgaged to the same agency, the credit agency will be in a more secure position.

It may be assumed, then, that the Government will authorize a credit agency to finance loans against the security of the marketing agency, when necessary, taking hypothecation of additional assets of the family, until the co-operative basis of the credit agency can be established. If, however, the question of this 19 per cent of the loan cannot immediately be agreed to by the Government, in spite of the fact that failure to provide for the simple bond portion of the loan will weaken the general position of the agencies at the start, we must proceed in any case with the marketing agency and its allied storing organization in rural areas, the completion of which will strengthen the credit agency and place it on a firmer basis.

To ensure an effective flow of co-operative credit, a strong commodity marketing agency under Government control, registered under the Companies Act, must be organized with branches throughout the rural area. It should have the following objectives:

(1) To reduce the prices paid by the consumers and to increase the agriculturists' share in the final price. The agency will have to buy commodities directly from the agriculturists and supply directly to the consumers, stocking same at the consuming market.

(2) To protect agriculturists from seasonal slumps in the prices of commodities. The agency will be required to stock surplus commodities in the rural areas in available godowns or, where unavoidable, to put up temporary buildings to serve as commodity storehouses, and it will also from time to time, when necessary, make part and advance payments through the credit agency, until the commodities are sold at a satisfactory price, when the accounts of advances can be adjusted and the balance handed over to the agriculturists.

(3) To render services required to stimulate production and when advisable control same and introduce new crops.

(4) To develop a special department for leasing available godowns and, where necessary, to build new ones in rural areas, and also for leasing godowns in Calcutta, the consuming market.

(5) To organize a department to store (a) raw materials for cottage industries, (b) salt, (c) cloth, (d) kerosene oil. Such supplies of necessaries easily made accessible to agriculturists will cement the working of the general scheme, since agriculturists prefer to buy their principal necessaries of life from the same place at which they sell or arrange to sell their commodities. Such a centre will serve as a commodity exchange and ultimately will help to establish more pleasant relations between all parties. To avoid risks involved in the fluctuation of prices, articles should be stored only to the extent of thirty days' requirements.

As previously pointed out, all these departmental activities should be so planned as to permit their future development as co-operative commodity marketing and co-operative stores.

It is unnecessary to elaborate here all the details of the financial working of the proposed scheme. As far as the credit agency is concerned it could be launched through arrangement with the Government of India for a sum amounting to 10 per cent of the capacity of the credit agency, at not more than 4 per cent interest. Of this, one quarter or $2\frac{1}{2}$ per cent might be granted immediately, and the balance secured at subsequent periods. The working capital, guaranteed by the Government, could be floated through debentures issued by the Imperial Bank of India at $3\frac{1}{2}$ or 4 per cent interest. This rate might be raised, however, as commodity prices rose. The rate of interest charged for agricultural loans should not exceed 6 per cent which is the maximum amount the agriculturists can afford to pay. We may note here that with the existence of a commodity marketing agency and commodity storing in rural areas the establishment cost of the credit agency would be less than that commonly accepted for large scale rural banks. In the event of the formation and proper functioning of the proposed agencies, the bulk of the capital now forming agriculturists' indebtedness in Bengal, when repaid, would reflow to the same borrower through the debentures of the proposed credit agency, and, further, it may be expected that these debentures would be accepted in repayment of loans.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A rough estimate of the required capital investment can be set down as: (a) For establishing a credit agency, Rs. 8·5 crores, (b) For estsblishing a commodity marketing agency with necessary godowns in rural areas, Rs. 8·5 crores.

Of this total of Rs. 17 crores, 25 per cent. or about Rs. 4·25 crores, may be granted at the start.

With the proposed reorgranization of the present credit and marketing agencies and the creation of a suitable storing organization, I estimate that the agriculturists' income can be increased 12 to 36 per cent by proper credit facilities, according to the different "debt classes", 8 per cent by efficient marketing of commodities, 8 per cent by control of seasonal price slumps through storage of surplus commodities. These figures, which are moderate, would thus jointly increase the agriculturist's income by at least 28 per cent.

Substitution of a Sales Depôt for a Commodity Marketing Agency

In case Government do not approve undertaking commodity marketing on a large scale, we must have recourse to a third alternative, which will substitute a sales depôt, with some dozens of sales departments in each district in all the suitable and important places. Since the problem of reducing agricultural indebtedness depends, in the first instance, on a provision for the flow of easy term credit, a credit agency must be established, but instead of working in conjunction with a commodity marketing agency, it will have to operate with the sales depôt.

It should be the duties of such a depôt to stimulate and, when necessary, to control production, to introduce new and improved crops, and, above all, to secure for the agriculturists better prices for their commodities. The actual marketing of products to consumers, in this case, will be left to the existing agencies of the mahajans. If nothing more, however, the organization of efficient sales departments for agriculturists throughout the rural areas will bring a very desirable change in the whole structure of the existing agencies of the mahajans, and will prevent the present malpractices during the time of assembling the commodities. Competition in buying the commodity at the sales depôt will almost at once increase the income of the agriculturist, 5 to 10 per cent, since at present he suffers not only from the monopoly control of the mahajans but from his own ignorance as to the prevailing commodity prices. A sales depôt will also create a field and atmosphere suitable to co-operative activity, and other joint enterprises can subsequently be developed without great difficulty.

Though the credit agency should at the earliest possible moment be placed on a co-operative basis, this should preferably not be compulsory at the start. It should, however, have a department in connection with its mortgage operations, through which it may either possess godowns or supply the agriculturists with galvanized iron sheets, bolts, nuts, etc., or the equivalent cash, to enable them to build for themselves their little godowns, thus minimizing the cost, and the credit agency or bank could take hypothecation of these when necessary as security for loans. With the help of the village panchayats and chowkidars and with the good feeling engendered in the agriculturist by the assistance rendered him, an arrangement might be made for stocking surplus commodities and advancing from time to time part value of the commodity stocked. When this was finally disposed of through the sales depôt at a satisfactory rate, the account with the bank could be adjusted.

In the event that factors should arise interfering with the development of the required volume of transactions by this system, general legislation might be enacted to sanction compulsory sale of all agricultural commodities through the sales depôt wherever credit is to be extended to an agricultural family without mortgage of real property. In addition, the credit agency could further safeguard its operations by making a valuation of the annual resources of each of the families seeking its help and taking hypothecation of the same. Since a definite relation will be set up between the credit agency and the sales depôt, security will thus be provided to enable the credit agency to extend credit for such portion of any loan as cannot be covered by mortgage.

With the proposed credit facilities we now estimate that the agriculturist's income will be increased, as in the previous case, 12 or 36 per cent, according to debt class, 8 per cent, by the organization for storing commodities in the rural areas, and 5 to 10 per cent through the sale of commodities at the sales depôt. Jointly, we obtain an estimated increase in the agriculturist's income of 25 per cent.

Thus with either of these two schemes, even with existing unfavourable world conditions and low price levels, the agriculturists of Bengal would be able not only to meet their present 10 per cent deficit but to secure a margin of 15 to 18 per cent to meet other dues and possibly obtain for themselves a little ease and comfort.

PLASTIC FORM IN BENGAL CLAY

By G. S. DUTT

THE recent revival of interest on an all-India scale in the resuscitation of the village industries of India has come none too rly. It is fortunate that it has come now fore the complete extinction, through lack of equate recognition and business organization, the hereditary artistic traditions and skill of village artisans of India. In the efforts at are being made, however, at present in rious quarters for the revival of rural indus-

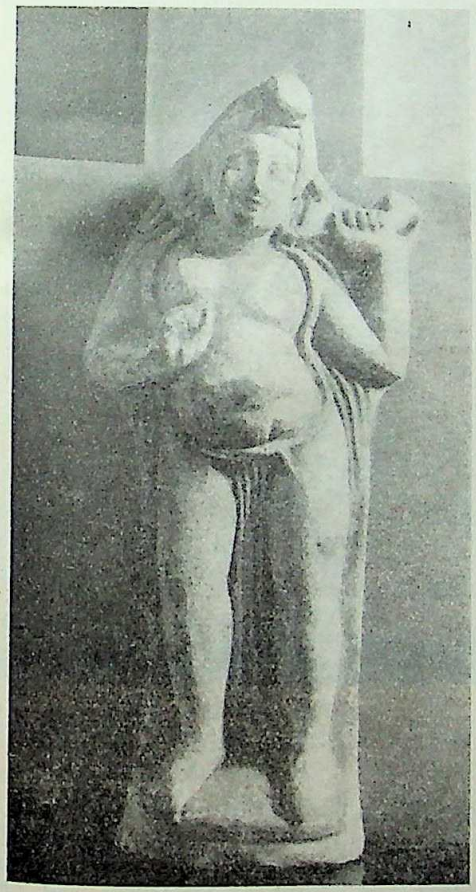

Fig. 1. Mahādeva

ies, one notices a singular lack of appreciation the importance of what is perhaps the most portant factor that is necessary to secure in der to enable village industries to withstand mpetition with the factory industries; namely, e conservation of the traditional artistic skill the village artisans. It is mainly by their herent artistic quality that village industries ill not only hold their own against the factory dustries but will capture the most lucrative arkets by catering to the demands of the people with taste and discrimination. From this point of view too much stress cannot be laid on the importance of conserving the hereditary artistic genius of the rural artisans of the villages of India and particularly of Bengal which has been for several centuries past sadly neglected owing partly to mis-education of our monied classes and partly to the poverty and want of organization of the artisans themselves. Once this traditional artistic genius is lost it would take many generations to bring about its rebirth, whereas by discriminating encouragement of the traditional skill of the indigenous village artists it is possible to give the products of village industries their peculiar national stamp and thereby a unique market value.

A striking illustration of the survival of the hereditary traditional skill and artistic genius of village artisans, inspite of centuries of neglect, is afforded by the clay images which are even now

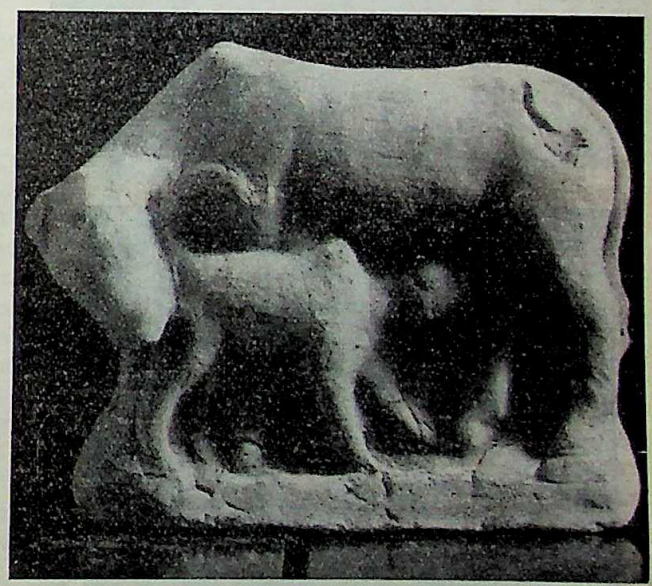

Fig. 2. Mother and child

turned out in many parts of Bengal by the village potters. In the case of the recently discovered Mathurapur monument in the district of Faridpur I had occasion to show how in the sphere of architecture and red terracotta sculpture the village potters of Bengal achieved results which challenge comparison with the famous stone sculptures of Western India. In the present article a few examples are given of clay images by contemporary potters in Eastern and Northern Bengal which exhibit plastic

Fig. 3. Jagaddhātri.

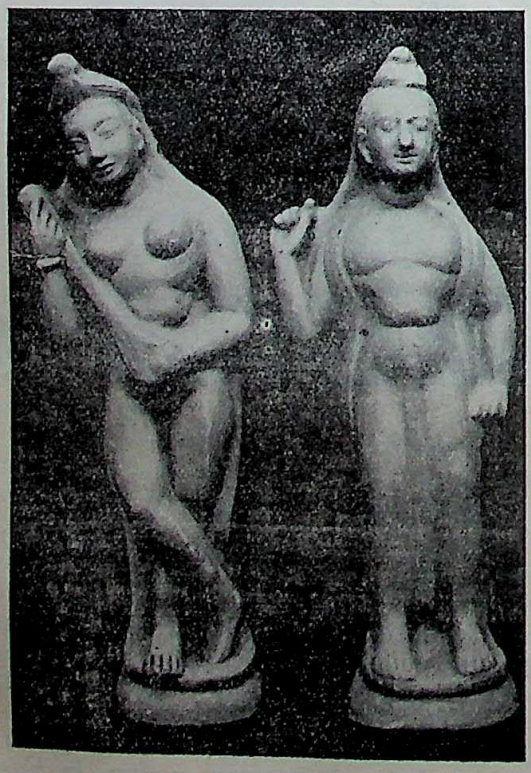

Fig. 4. Saraswati Gauranga

talent of a remarkable character and which demonstrate that among the poor illiterate village potters of Bengal there still survives a precious art tradition inherited from the master artists of medieval Bengal by virtue of which they can produce, out of the humble native clay of Bengal, images which throb with life and movement and exhibit as high a degree of plastic genius as has ever been found in any sculpture wrought out of the more aristocratic medium of stone or marble.

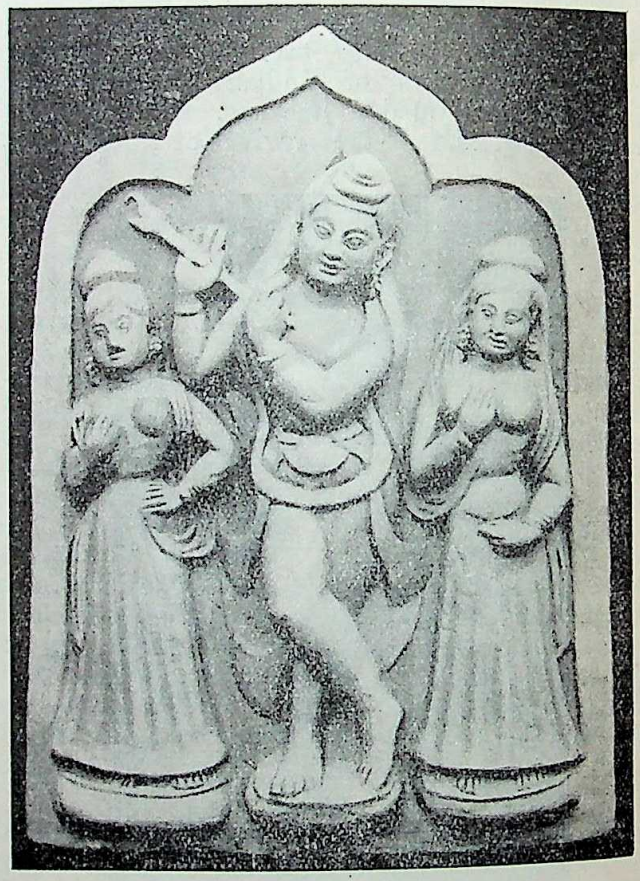

Fig. 5. Krishna and Gopinis

Perhaps the most remarkable of these images which are in my collection and of which reproductions are given here, is the burnt clay image of Mahadeva (*Fig. 1*). This was discovered by me twelve months ago in the village of Mathurapur in the district of Faridpur under the very shadow of the Mathurapur monument. This Mahadeva image is the work of a contemporary potter of the village who is the direct lineal descendant of the master artists who produced the Mathurapur monument. An exquisite plastic quality is shown in the dignity, repose, grace and balance of its pose, in the easy rhythm of its limbs and in the strength, determination and robustness of the stance of its legs. The image is remarkable for the spiritual quality of its form conveying a state of transcendental ease and a supreme detachment from worldliness which is the essence of the Siva

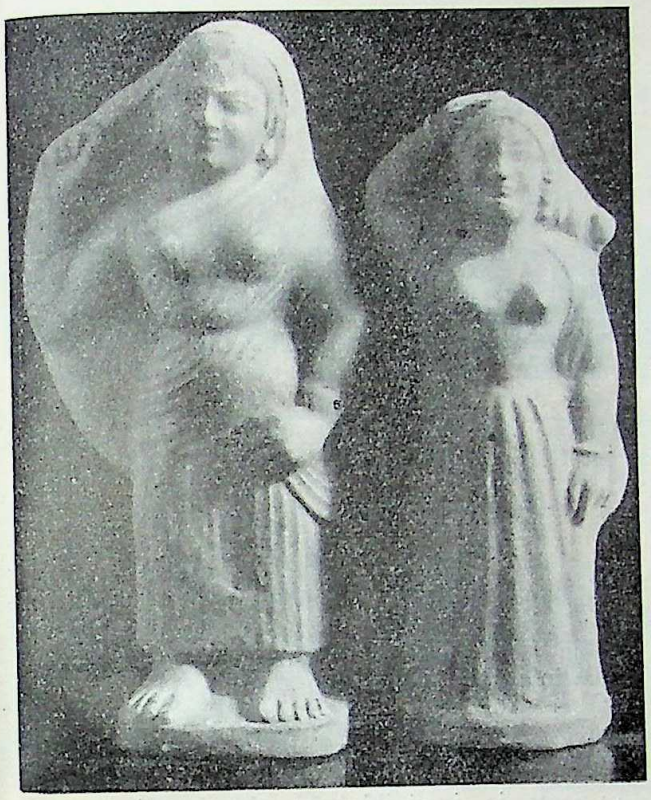

Fig. 6. Two women

conception. In the image of the suckling cow and calf (*Fig. 2*) is embodied the eternal mother and child theme in living clay. This remarkable piece of moulded clay was procured by me from the district of Rangpur. The youthfulness, energy and vigour of the calf, the motherly pride, tenderness, protectiveness and affection of the cow have been here brought out by a few bold and simple touches of the artist's fingers without any effort whatever in bringing out any anatomical details, with the result that in the significant sweeps of its lines and in the harmonious rhythm with which the various parts of the design have been welded into one single whole, this image might be described as a masterly creation of form in what appears at first sight to be a formless lump of clay. Indeed, these two images of Mahadeva and the cow and calf may aptly be described as classics in clay.

Fig. 3 representing the Goddess Jagaddhatri riding on two lions; *fig. 4* repre-enting Saraswati playing on a Vina and Gouranga; *fig. 5* representing Krishna with a Gopini on each side; *fig. 6* representing two women and *fig. 7* representing Krishna in the act of attempting to regain the love of Radha with the traditional benevolent *Baraiburi* solicitously hoping for his success in his endeavour, are specimens collected from the village of Nalia in the district of Faridpur. They all exhibit, although perhaps in a less remarkable degree than in the specimens already dealt with, the village potter's skill in plastic design. The quality of robustness is a typical feature in all these specimens of the village potter's art unlike the usual all-too-neurotic and effeminate products of the urban artists of modern Bengal. The type of lions represented as the mount of the Goddess Jagaddhatri is perhaps a survival of the traditional lion *motif* of ancient India from the time of the Asoka pillar at Sarnath. There is a simplicity and sweetness in the representations of Saraswati and Gouranga which is peculiar to the work of

Fig. 7. Māna lilā

the village artists of Bengal. The skilful plastic composition in the *mana lila* group and the rhythmic harmony with which the three separate figures as well as the crowning arch with its graceful curve have been welded into a unity and wrought into one single whole reveals the artist's traditional genius for plastic design.

It is by fostering this hereditary artistic skill and the precious art traditions of the village artisans that a value can be conferred on the products of the village industries which will place them above competition from factory products. The examples given here are only a few random instances of the remarkable art tradition that still survives in the villages of Bengal but which, unless duly encouraged forthwith, will before long become extinct beyond recovery.

ENGLAND-AUSTRALIA AIR RACE

THE England-Australia Air Race has been also called the London-Melbourne Air Race and the Mildenhall-Melbourne Air Race. The competitors started from the R. A. F. aerodrome at Meldenhall, Sussex, England. This race is connected with the Melbourne centenary celebrations, in connection with which there will also be a World Press Conference.

According to *The Indian*, Melbourne was founded in 1834 as a village.

The honours for the first permanent settlement of Melbourne have been divided between Edward Henty and John Batman. Thomas Henty, a Sussex farmer, and his seven sons were settlers in Tasmania, and in 1834 part of this family, led by Edward Henty, crossed to Port Phillip Bay in Victoria. In the following year Batman, inspired by the Hentys, landed at Port Phillip, found the Yarra River, and picked out as his site for a village the site on which Melbourne now stands. None of the other capital cities in Australia stands today on the same site as was originally intended. Batman found some natives, and he entered into an agreement with them whereby he purchased 600,000 acres of land (an area eight times as large as the whole City of London) for the following articles: 40 pairs of blankets, 130 knives, 42 tomahawks, 18 red shirts, 40 mirrors, 62 pairs of scissors, 250 handkerchiefs, 4 flannel coats, 4 suits, and 150lb. of flour.

The news of these settlements spread and by 1836 the population of Melbourne was 236. Today the population is 992,000 and that of Victoria 1,800,000.

The race was divided into two sections: one—a speed contest for a first prize of £10,000 and a gold cup valued at £650, a second prize of £1,500 and a third prize of £500; and a handicap race for prizes of £2,000 and £1,000. The donor of the prizes, totalling £15,000, was Sir MacPherson Robertson, the Melbourne millionaire chocolate manufacturer. All nations could enter the lists, with any type or power of machines. Originally sixty-four entrants wanted to compete; but some of them withdrew from the contest later. It was arranged that, for checking purposes, landings must be made at the control points at Baghdad, Allahabad (air station Bamrauli), Singapore, Darwin and Charleville, and there were other checking stations *en route* for the convenience of competitors. The total distance to be covered was 11,333 miles, divided into hops of 2,554 miles to Bagbdad, 2,299 miles to Allahabad, 2,219 miles to Singapore, 2,084 miles to Darwin, 1,389 miles to Charleville, and 791 miles to Melbourne. A map of the direct route is given here with acknowledgments to *Flight*.

Scott and Black were the first to reach Melbourne, thus becoming entitled to the first prize in the speed race.

Final Speed Results

Melbourne, Nov. 5.

Official placings in Mildenhall-Melbourne handicap race are:

Scott and Black	...	...	I
Parmentier	...	...	II
Melrose ...	...	...	III

Handicap Result

As Scott is ineligible for the handicap prize money, Parmentier and Melrose take the first and second prizes, respectively.

Timings of Journey

Melbourne, Nov. 5.

Cathcart Jones and Waller have been awarded third speed prize in the air race according to official results. The second prize goes to Americans Roscoe Turner and Pangborne owing to the decision of Dutchmen Parmentier and Moll to accept first prize for the handicap race instead of second speed prize.

The official times are:

Scott and Black: Whole journey 70 hours 54 minutes 18 seconds. Flying time: 65-24-13, Nett handicap flying time: 68-48 49.

Parmentier and Moll: Whole journey 90-13-36, Flying time: 81-10-36, Nett Handicap flying time: 76-38-12.

Handicap race flying times are:
Melrose 79-17-55.
Stodart and Stodart 79-32-30.
Macgregor and Walker 82-43-34.
Hewett and Kay 85-42-28.
Hanson 87-45-21.

Apart from questions of national glory and prestige, this air race has strategic, political and commercial importance.

NOTES

General Condemnation of Joint Parliamentary Committee's Report

From the point of view of the Indian nation—the aggregate of all the races and communities constituting the people of India—the "Report of the Joint Select Committee of Parliament on the proposals contained in the White Paper on Indian Constitutional Reforms" deserves very strong condemnation. And such condemnation it has received from all those who have considered it from the national point of view. Though nobody started a competition in the use of strong language in characterizing it, the sense of dissatisfaction and resentment has been so great in our midst that publicists and public men in general appear to have naturally and spontaneously vied with one another as it were in delivering severe verbal attacks on the Report. It may be considered a sufficient condemnation of the Report to say that it is worse than the White Paper.

Mountain in Labour Produces Plague-infected Rat

Old Æsop wrote a fable about a mountain, which was in labour, producing a mouse.

If the bodies of men, of whom the British element formed the dominant and controlling section and had real power, and who were variously styled commission, conference and committee, had after six years of labour really produced a little mouse able to free India from the meshes of subjection by nibbling at them, that is, had given to Indians a self-expanding constitution with the smallest beginnings of automatically developing self-rule—some little real final power, however small, which could have grown automatically—that would have been some satisfaction. But they have not produced even such a mouse—they have not recommended the giving to Indians the smallest modicum of self-expanding final power.

Instead, they have produced a plague-infected rat, a constitution infested with communalism and other disruptive and disintegrating poisons.

Starting with Falsehoods

Falsehoods, explicit or implied, persistently repeated, sometimes come to be accepted or acquiesced in even by those who know their true character. Take, for example, the expression "Indian Round Table Conference." Properly speaking, a round table conference is "a conference between political parties in which each has equal authority, and at which it is agreed that the questions in dispute shall be settled amicably and with the maximum amount of 'give and take' on each side." This makes it clear that the so-called "Indian Round Table Conference" was not a round table conference at all. Hence, we have repeatedly used the word 'so-called' before 'Round Table Conference', when referring to it, though it is rather tiresome to do so. Take next the expression "Communal Award." When Mr. Ramsay MacDonald gave his decision on the Indian communal problem, he did not call it a communal award. He used the words "decision on communal representation." Moreover, the "Proceedings of the fourth meeting of the Consultative Committee of the Round Table Conference, held in the Committee Room in the Viceroy's House, Delhi, at 10-30 a. m. on the 24th February, 1932,"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with His Excellency Lord Willingdon in the chair, show conclusively that it was not an arbitral award. The Chairman brought that meeting to a close by saying that the Prime Minister's offer to arbitrate was not accepted. His Excellency's exact words were : "I am advised that at that time the Prime Minister made an offer as Chairman of the Committee, but that was not accepted." Therefore, the Communal Decision should not be called an Award. It is not binding on anybody. But recently the Director of Public Information has tried to show that it was an award. And now we find the J. P. C. Report calls it the Communal Award in paragraphs 118-120. But no amount of repetition can convert an untruth into a truth.

These two examples will show that persistent repetition of falsehoods may deceive people into believing them to be true.

The first paragraph of the summary of the Report of the Joint Select Committee supplied to the Press runs thus :

> "In presenting their Report to Parliament the Joint Select Committee place on record their appreciation of the help derived from their discussions with the Indian delegates. Particular mention is made of the Joint Memorandum signed by all the British Indian delegates which is stated to have been of great service to the Committee as focussing British Indian views."

The paragraph in the Report (vol. i, part i, p. vii) in which this has been done runs as follows :

> "We desire to place on record our appreciation of the assistance which we have derived from our full and frank discussions with the Delegates, for many of whom so long an absence from their own country must have caused great personal inconvenience and sacrifice. Their advice and co-operation have been of the greatest value to us. Many of them have furnished us with separate memoranda on various points, but we would mention in particular the Joint Memorandum signed by all the British Indian delegates who were still in England, which has been of great service to us as focussing British Indian views and to which we shall have occasion often to refer in the course of our Report."

The Committee know that the Indian gentlemen referred to were only nominees of the British Government. As "delegate" means "elected representative sent to conference" and as these persons were not elected by any group of Indians, large or small, in British India, it is wrong to call them British Indian delegates. Their views cannot be rightly regarded "as focussing British Indian views."

The signatories to the Joint Memorandum were the Aga Khan, Abdur Rahim, Shafaat Ahmed Khan, A. H. Ghuznavi, Zafrullah Khan, Henry Gidney, Phiroze Sethna, Buta Singh, M. R. Jayakar, H. S. Gour, B. R. Ambedkar, and N. M. Joshi. There is no Congressmen among them. The opinions of any body of men none of whom is a Congressman cannot be rightly called Indian views, though they may be called "opinions of some Indians." Only a few years ago the Governor-General of India spoke of the Congress as the most important political organization in India. And today, after the elections to the Assembly, nobody can deny that Congress is by far the largest and most representative organization in India. And yet the views of twelve non-Congressmen are referred to as British Indian views ! British perhaps they are. But how far Indian, need not be said.

The Committee profess to attach great value to the Joint Memorandum of these Indian gentlemen. They have considered it so valuable that almost every one of the suggestions contained in it has been rejected !

Why J. P. C. Valued Joint Memorandum

As indicated above, the value which the Joint Select Committee of Parliament attached to the Joint Memorandum which the so-called delegates from British India submitted, is not obvious, for the Committee have rejected almost all their suggestions or proposals. Perhaps the Committee valued the Memorandum for some peculiar reason. Perhaps they thought that even the proposals and suggestions, embodying the irreducible demands of a body of Moderates, contained in them the seeds of India's political and economic freedom, and Indian ingenuity might be able to make these seeds germinate and grow up into mighty trees. Therefore, the Committee's task of preventing the evolution of India's political and economic freedom was made easier by the rejection of those minimum demands. The value of the Joint Memorandum lay in presenting within a brief compass the least which would satisfy even very moderate opinion in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India. By rejecting even these minimum demands, the Committee have been able axiomatically to reject the demand of *Purna Swaraj* made by the Congress.

Superiority of J. P. C. Report over White Paper

Though the recommendations of the J. P. Committee are worse than the White Paper proposals, the J. P. C. Report is in one respect superior to the White Paper—it possesses higher literary merits. But its higher literary value does not make it more acceptable to India.

J. P. Committee's Unwarranted Assumptions and Sophistry

English is a highly developed lauguage, and has been used for centuries for diplomatic and imperialistic purposes. Its ample resources can, therefore, be used for purposes of sophistry and obfuscation.

By unwarranted assumptions, and sophistry, the J. P. Committee have tried to produce the impression that the "safe-guards" are like substitutes for some of the conventions which have grown up in Great Britain's parliamentary procedure and administrative operations, but which are not to be found in that country's written constitution, and that the dictatorial powers recommended by the Committee to be given to the Governor-General and the provincial Governors are like the executive powers possessed, for example, by the President of the United States of America !

No Indian, no body of Indians, possesses at present, the power to counteract the mischievous attempt of the Committee to prevent India from attaining self-rule. But that Committee may rest assured that the Indian intellect has not been and cannot be obfuscated by their Report. Its sophistry and unwarranted assumptions can all be exposed. They will be and are being exposed to a considerable extent, though not fully.

Why Thorough Exposure of J. P. C. Report Is Impracticable and Perhaps Waste of Energy

If there be not a thoroughgoing criticism and exposure of the J. P. C. Report, it will not be because the intellect and the fund of political knowledge and information of politically-minded Indians are not equal to the task. It will be because sufficient time will not be available and cannot be given for its performance. And perhaps to some extent the penal laws and the uncertainty of their interpretation and administration may be some discouragement.

The present long-drawn endeavour to keep Britain's political and economic grip over India unimpaired, of which the J. P. C. Report is the latest manifestation, began some six years ago with the Simon Commission. There were auxiliary committees to assist in its work. The Government of India took a long time to consider its report and give expression to their opinions. Then followed the so-called Round Table Conferences. The Joint Select Committee themselves, during their two sessions in 1932-33 and 1933-34 in the course of eighteen months, have held 159 meetings in all and have examined over 120 witnesses. The two parts of Volume I, Report and Proceedings, contain more than a thousand pages. The three booklets of Records contain more than a hundred pages of small print. We have not yet recieved Volume II, which contains the Records of the Joint Committee [*Session 1933-34*]. The Proceedings, Evidence and Records of the Committee [*Session 1932-33*] are to be found in other parliamentary publications.

To master all the literature produced by the J. P. C. alone in 18 months, not to speak of those produced by other bodies mentioned above, is a task which cannot be performed in the course of a few days or weeks or months. And the Bill, forming the draft of the future Government of India Act, will be before Parliament till July, 1935, after its introduction in January, 1935. Assuming, what is not true, that any Indian criticism can effectively influence the present House of Commons, the time at the disposal of any Indian or any Indian representative body is not sufficient for a thorough examination and exposure of the views of the J. P. C. Such criticism and exposure would require at least as much printed space as the thousand and odd pages of Vol. I. of the J. P. C. Report and Proceedings. No Indian newspaper or

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

periodical can devote so much space to the task.

But supposing so much space could be given, would it be worth while? The answer must be in the negative. The same practical contempt for and indifference to Indian opinion which characterize the J. P. C. Report are characteristics of the majority of sitting M. P.'s.

Nevertheless, as the majority of politically-minded Indians, including our readers, do not possess the leisure and the opportunities to get acquainted with and to study the facts and arguments at first-hand which newspaper men possess, we shall in succeeding issues, with the help of our kind contributors, present our readers with some detailed criticism of the J. P. C. Report. Of course, this is being done already by the leading newspapers.

Imperial Splendour of the Mogul Empire and the British Empire

Paragraph 6 of the J. P. C. Report records "the British Achievement." Paragraph 7 is devoted to the Mogul Empire. That paragraph contains the words: "The imperial splendour became the measure of the people's poverty." That could be said also of the Czarist regime in Russia.

It cannot be doubted that the British Empire also possesses "imperial splendour." Look at the palaces of the State in New Delhi and the provincial capitals and the Victoria Memorial in Calcutta.

As regards the material condition of the people, only two official statements need be quoted:

(1) The Montagu-Chelmsford Report, signed by Mr. Montagu, the then Secretary of State for India, and Lord Chelmsford, the then Governor-General, states in section 132 that "the immense masses of the people [of India] are poor, ignorant, and helpless far beyond the standard of Europe."

(2) The J. P. C. Report itself states in paragraph 2 that in India "the average standard of living is low and can scarcely be compared even with that of the more backward countries of Europe."

Whether "imperial splendour" has any universal and necessary connection with "popular squalor" cannot be definitely asserted without examining the condition of the subject people under all empires, past and present. But there appears to be some such connection in some cases at any rate.

"The Educational and Material Progress of India."

It is stated in paragraph 9 of the J. P. C. Report:

> "...it can be claimed with certainty that in the period which has elapsed since 1858, when the Crown assumed supremacy over all the territories of the East India Company, the educational and material progress of India has been greater than it ever was within her power to achieve during any other period of her long and chequered history."

Regarding educational progress, let it be assumed that the claim has been rightly and correctly made. What is the extent of this educational achievement? In the Report itself it is admitted in paragraph 2:

> "Literacy is rare outside urban areas, and even in these the number of literates bears but a small proportion to the total population."

To be exact, only 8 per cent of the population are literate and 92 per cent are illiterate. Among civilized countries India holds the record for illiteracy. Japan began to be "modernized" by her native rulers much later than India was intentionally or unintentionally subjected to "modernization" by her foreign ones. Yet, except among infants, literacy is practically nniversal in Japan among both sexes, and no country at present surpasses her in literacy. The aboriginal Negroes in Africa were an alphabetless and literatureless people. Those of them who were sold into slavery in America and their descendants could be educated legally only after December 11, 1865, the date of their emancipation. Before that date it was a penal offence to teach them or for them to receive education. Yet in sixty-five years since 1865, education spread among them to such an extent that in 1930 only 16.3 per cent of them were illiterate. In Russia in 1926 the percentage of illiterates was 48.7. At the end of 1930 it was 33. And at the end of 1933 it was only 10.

These statistics show that the authors of the J. P. C. Report should have avoided

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

referring to educational progress in India. Such progress can and ought to be measured only by the spread of education among the masses, of however rudimentary a character; not by the production of a number of graduates and undergraduates. That being so, perhaps it may be said that there has been little educational *progress* in India worth mentioning so far as the masses are concerned. For the late Mr. Keir Hardie wrote in his work on *India*, page 5:

> "MaxMuller, on the strength of official documents and a missionary report concerning education in Bengal prior to the British occupation, asserts that there were then 80,000 native schools in Bengal, or one for every 400 of the population."

There is not in Bengal even now an educational institution of any kind or grade for every 400 of the population.

Keir Hardie continues:

> "Ludlow in his history of British India says that 'in every Hindoo village which has retained its old form I am assured that the children generally are able to read, write, and cipher, but where we have swept away the village system, as in Bengal, there the village school has also disappeared'."

Mr. Edward J. Thompson writes in *The Reconstruction of India*, published in 1930, p. 255, that in pre-British India, "there was more literacy, if of a low kind, than until within the last ten years." But even now there is practically literacy only of a low kind among only 8 per cent of the population; and we have adduced evidence above to show that there was more of it before. If there is at present a small class of English-book-learned men, there was formerly a similar small Sanskrit-book-learned or Persian-book-learned class.

Mr. Thompson speaks of the state of things "ten years ago," that is in 1920. Well, in 1921 the percentage of illiteracy in India was 92·9, and in 1931 it had become 92. And even this imperceptible progress is illusory. For whereas in 1921 there were 29,34,31,580 illiterates in the country, the number of illiterates in 1931 had increased to 32,16,28,003.

In the previous note we have given two official statements relating to the material condition of the masses, who form the vast bulk of the people. An indication of the material condition of the people of a country is afforded by their "expectation of life" in years at birth. A table of the "expectation of life" in different countries is reproduced below from the Census of India, 1931, Vol. I, Part I, pages 171-172:—

Country.	Expectation of Life at Birth in Years. Males.	Females.
Australia	55·20	58·84
Denmark	54·9	57·9
England	48·53	52·38
France	45·74	49·13
Germany	44·82	48·33
Holland	51·0	53 4
India	22·59	23·31
Italy	44·24	44·83
Japan	43·97	44·85
Norway	54·84	57·72
Sweden	54·53	55·98
Switzerland	49·25	52·15
United States of America	49·32	52·54

What the J. P. C. Report Recommends

It is difficult to state briefly what the J. P. C. Report recommends. Such reports generally give at the end of the chapters or at the end of the volumes the recommendations in collected form. This report does nothing of the kind. By having the introductory matter and the Proposals printed in separate sections the White Paper made it easy for the reader to find out the proposals. In the case of the J. P. C. Report one has to wade through the entire contents of the first part of Volume I to find out what the Committee's recommendations and suggestions are. The summary officially supplied to the Press is necessarily meagre.

In going through the Report proper, the reader will find that the Committee recommends the shadow of self-government to be given instead of the substance. It would be mockery to call it constitutional reform.

Far from recommending the grant of Dominion Status and Responsible Government the Report does not even theoretically accept these as the distant ideal or goal.

It fully maintains the control of the Government of India from Britain.

The future Indian legislature will not be competent to amend the constitution.

Defence, External Affairs, and practically also finance, currency, exchange, etc., will be outside the jurisdiction of the Central Legislature, the Governor-General being expressly or by implication invested with dictatorial powers over these matters.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There is to be no statutory declaration of fundamental rights.

Like the present Government of India and Central Legislature the future Federal Government and Legislature will have no power to accelerate the Indianization of the army, or to reduce the white garrison or to reduce the present extravagant military expenditure.

All national governments possess and, when necessary, exercise powers to promote national industry and commerce by legislative and administrative means. In order to "hang" all such methods of promoting the economic interests of India, the White Paper and the J. P. C. Report give them the "bad name" of "commercial discrimination." In this matter the Committee go further than the White Paper.

> "The Committee accept the White Paper proposal that the Governor-General and Governors should have a special responsibility for the prevention of discrimination, but consider it should be made clear in the Act that this responsibility would extend to the prevention of administrative discrimination in any of the matters in respect of which provision is made against legislative discrimination."

Not the Government of India and its Legislature but a statutory railway authority almost independent of them will have control over state railways. Hence the promotion of Indian industry and commerce and the convenience and comfort of Indian passengers through these railways will be beyond the power of the Indian legislature if the statutory railway authority be not merciful.

There is to be no direct election to the Assembly, but the method of indirect election discarded in 1919 is to be adopted with the additional disadvantage of separate communal election by provincial legislatures.

The Communal Decision of the Prime Minister is accepted in full.

There is no knowing when Federation is to come, and, when it comes, the autocratic rulers of the states and the bureaucracy will have complete power to hold Indian nationalism in check.

> "Federation should not come into existence until the Rulers of States representing not less than half the total population of the States and entitled to not less than half the seats alloted to the States in the Federal Upper Chamber have signified their desire to accede." "The accession of a State cannot take place otherwise than by the voluntary act of its Ruler." "There can be no question of compulsion so far as the States are concerned."

The Rulers of the States (and others who have inside knowledge) know that these exalted personages are not exactly free agents. They know that they cannot go against the wishes of the Residents and Political Agents in any important political matter. Therefore, it is clear that it will be possible for the latter to postpone the birth of Federation as long as may be considered necessary by preventing the 'voluntary' accession of a sufficient number of States.

In the meantime there is to be so-called provincial autonomy.

> The Committee endorse the general plan of the White Paper for a statutory delimitation of the respective spheres of government between the Central and Provincial Governments. However carefully the lists of subjects of legislation are drawn up including a list of subjects of concurrent jurisdiction, nevertheless a residue is inevitable. Accepting the White Paper proposal, the Committee agree that the allocation of the residue should be left to the Governor-General.
>
> The White Paper plan to create new Provinces of Sind and Orissa is approved.

These deficit Provinces will be subsidized by the Central Government. Provincial autonomy will be nominal. For the Ministers will be dummies and the Governors will have dictatorial powers. "Safe-guards," "special responsibilities," "Governors' Acts," the power to withold assent to legislation, and so on, are mere cloaks for investing the Governors with such powers. "The Committee agree that for the discharge of his special responsibilities the Governor will need power to secure finance and legislation."

Ministers and the Legislature will have no power over officers of the Indian Civil Service and the Indian Police Service. Ministers will not be competent to amend Police Acts or even revise Police Regulations without the concurrence of the Governor.

Not only Bengal, Bihar and the United Provinces but also Bombay and Madras are to have second chambers.

The Governor-General and Viceroy is to be the Super-dictator. He is to be a greater Dictator than he is now.

Burma is to be separated from India simultaneously with the inauguration of "reforms" in the Indian provinces, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

prevailing Burmese anti-separatist opinion being ignored or brushed aside.

Unity of India Jeopardized

In order that India may be free and remain free it is necessary that she should be united and remain united. One of the reasons why she could be enslaved so often was that she was not united. But the J. P. C. Report divides her into separate units by giving her the semblance of provincial autonomy and relegating the federation of these units with the States to an indefinitely distant future. And even when, if ever, this federation comes, it will be, not a federation, but a sort of confederation, with the foreign autocrats and bureaucrats lording it over the whole of India with the rulers of the States at their beck and call.

British autocratic and bureaucratic rule was, perhaps unintentionally, accelerating the unification of India in various ways. The mock provincial autonomy intended to be given to India will reverse that process and may end in her disruption and disintegration unless the people of India are able to exert all their powers to remain united and become free.

Danger to India of Provincial Autonomy

Provincial autonomy, or rather its semblance, has all along been liked by British Imperialists, as, for example, the following extract from Major B. D. Basu's *Consolidation of the Christian Power in India* will show :

> One of the proposals for the consolidation of the Christian power in India, after the suppression of the Indian Mutiny, was what was euphemistically called "provincial autonomy," but which was really the policy of "Divide and rule." Before the Parliamentary Committee on the Colonization and Settlement of the Britishers in India, Major G. Wingate, who appeared as a witness on 13th July, 1858, on being asked, "7771. You speak of the dangers that arise from a central government and you say that it leads to a community of aims and feelings that might be dangerous ?"
>
> answered :
>
> "Yes. I think that, if there be any one subject in which the whole population of India would be interested, that is more likely to be dangerous to the foreign authority, than if a question were simply agitated in one division of the empire ; if a question were agitated throughout the length and breadth of the empire, it would surely be much more dangerous to the foreign authority than a question which interested one Presidency only."
>
> "7772. *Mr. Danby Seymour*—
>
> "Is what you mean this, that all the people of India might be excited about the same thing at the same time ?"
>
> "Yes."

On these questions and answers Major Basu's comments in his book are :

> He (Major G. Wingate) gave expression to the feeling which was uppermost in the minds of the Britishers at that time, not to do anything which might "amalgamate" the different creeds and castes and provinces of India. So everything was being done to prevent the growing up of a community of feelings and interests throughout India which would make the people of India politically a nation. Of course, they have been a nation in a different sense since antiquity.

These extracts may indicate the conscious or sub-conscious feeling which has perhaps led the J. P. Committee to grant the "boon" of so-called provincial autonomy at once to the people of India, relegating federation to an uncertain future.

Disintegration and Re-integration

It has been generally recognized, and that rightly, that Mr. Attlee's Draft Report is statesmanlike and better than the J. P. C. Report. Mr. Attlee writes in his Draft with reference to the disintegration and re-integration involved in provincial autonomy and federation respectively :

> "The Indian Statutory Commission pointed out that the formation of a Federation entailed a double process : that of the creation of autonomous Provinces and their re-integration in a Federation. We have no doubt that the double process must be embodied in the same Statute and that the time lag which may be necessary between the establishment of Provincial autonomy and the creation of the federation should be no longer than that which is absolutely dictated by administrative necessity."

Mr. Attlee evidently knows that without Federation provincial autonomy would destroy the unity and power of India. He, therefore, does not agree that the accession of a sufficient number of States should be a condition precedent to Federation. Says he :

> "The White Paper suggests that a federation which comprised the Provinces and only a small number of the States would hardly be deserving of the name. We are unable to agree. We consider that the forces making for Federation are so strong that it is certain that before long a majority of the States, in numbers and population, will accede."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

So far as the feelings of the Rulers themselves of the States are concerned, the last-quoted sentence is most probably correct. But if their masters, the Residents and Political Agents, will otherwise, the result may be different.

Mr. Attlee continues :

> "At the same time it is possible that there might be some hesitation at the beginning and we see no reason why the rest of India should wait for a certain number of Rulers of States to change their opinions before enjoying responsibility at the Centre. We would prefer that the Federation should start with a very large proportion of the Indian States included in it, but we believe that in any event a start should be made and that it should be possible to build up a Federation by a gradual accretion of States."

But Mr. Attlee's draft was summarily rejected and the opinions and policy of the would-be disintegrators of India have prevailed.

Does J. P. C. Deliberately Want to Destroy Indian Unity ?

The Joint Parliamentary Committee know that Provincial Autonomy would have a disruptive effect without Federation being brought about. Yet they do not insist upon Federation even half as strongly as on Provincial Autonomy. Why, they do not even really believe in Indian unity while professing to do so ! We quote below a few sentences from their Report in support of our observations.

> "We have spoken of unity as perhaps the greatest gift which British rule has conferred on India ; but, in transferring so many of the powers of Government to the Provinces, and in encouraging them to develop a vigorous and independent life of their own, we have been running the inevitable risk of weakening or even destroying that unity. Provincial Autonomy is, in fact, an inconceivable policy unless it is accompanied by such an adaptation of the structure of the Central Legislature as will bind these autonomous units together."

The men who say that unity is the greatest gift of British rule also say the following !

> "A completely united Indian polity cannot, it is true, be established either now or, so far as human foresight can extend, at any time."
>
> "...a responsible British-India Centre is not a possible solution of the constitutional problem, or would, at most, only be possible at the price of very large deductions from the scope of its responsibility."

Shipping in the Joint Parliamentary Committee's Report

In the section dealing with commercial and other forms of discrimination, the Joint Committee devote a short paragraph to shipping. Shipping is singled out for the application of the principle of reciprocity, partly because of the special nature of shipping legislation and partly because of the vital importance of shipping to British economic life, not to mention the desire to prevent any legislation like reservation of Indian coastal trade for Indian-owned shipping in future. The principle of reciprocity which is to regulate shipping registered in British India and the United Kingdom is one that cannot bear scrutiny. Reciprocity as a basis of economic relationship between England and India, especially in an industry like shipping, is meaningless because of the disparity between the interests which Indians have or could have in England and the interests which Britishers have and will continue to have in India. Moreover, the divergence in the economic development of the two countries and the fact that British shipping dominates not only the overseas but the coastal trade of India make the plea of reciprocity simply preposterous. The inferiority of Indians, as compared to Britishers, whether in India or in England, rests not on legal principles but on economic facts. It is because Great Britain has nothing to fear from a weak and industrially backward India that she is prepared to concede this formal but unreal reciprocity. As Mr. G. L. Mehta remarked in his article on "Commercial Discrimination," published in this journal in April 1933, "to grant to Indians the right to start steel works in Sheffield or cotton mills in Lancashire or shipping firms in Liverpool in return for the same privilege to Britishers in India is a joke which may be entertaining to its makers but seems cruel to Indians."

The White Paper recommended in paragraph 123 that provision will be made on the same lines for equal treatment on a reciprocal basis of ships registered respectively in British India and the United Kingdom. The Joint Committee in paragraph 354 deal, therefore, with the same point. It will be noticed that "ships registered in the United

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Kingdom are not to be subjected by law in British India to any discrimination whatsoever as regards the ship, officers or crew or her passengers or cargo, to which ships registered in British India would not be subjected in the United Kingdom." If, for instance, in order to give effect to the policy of Indianization of marine services and to assist the employment of Indian navigation officers and engineers trained in the "Dufferin" and elsewhere, the Government of India propose to make the employment of Indian technical staff as a condition precedent to plying on the Indian coast or receiving mail subsidy, it will have no power to do so, because no corresponding legislation exists in England. Similarly, if owing to Japanese or other foreign competition or owing to rate-wars between British and Indian shipping companies plying on the coast, the Government want to introduce a licensing system laying down conditions under which ships could be engaged in the maritime trade of India, the Government would be precluded from doing so. Coastal reservation would, of course, be rendered impossible and the Government of India would be deprived in future of the powers which they possess even at present, because in theory, at any rate, there is nothing to prevent the present Legislature passing a measure like the Coastal Reservation Bill. It is a patent argument of British interests that Britain herself does not protect her coastal trade against foreigners. This is absolutely irrelevant, because as stated by Mon. Reny Mausaize in his work on shipping, the real reason for throwing the English coast open to all ships was not a matter of principle but an urgent necessity for domestic industries, especially coal, to be properly served. In fact, however, British shipping is so strong that more than 90% of British coastal trade is carried on by British vessels alone. Nevertheless, even in recent years there have been proposals of reserving the British coastal trade to British shipping and even the inter-Imperial trade to vessels flying the British flag, in which, of course, the shipping of the United Kingdom being the largest would have the lion's share. We are aware of the passion for reciprocity and partnership which has suddenly inspired Whitehall and Delhi, but we are afraid their desire for equality is taking rather ominously fantastic and inequitable forms!

Indirect Election to the Federal Legislature through the Provincial Legislatures

The indirect method of election to the Central Legislature, adopted in the Minto-Morley reforms, was discarded in 1919 and the direct method adopted instead. But the J. P. C. Report reverts to the indirect method. Lord Reading, Lord Ker and Mr. Foot moved an amendment in favour of the direct method. They opposed the indirect method for five main and very weighty reasons. These are stated and elaborated in a long paragraph (pp. 373-375, vol i, part ii). We shall quote only the reasons.

> In the first place it means that the provinces, in effect, will be able to control the Central Legislature and therefore the Ministry. The supreme problem in India is the maintenance of its constitutional unity. The breakdown of its central government is the greatest catastrophe which could overtake the country. Yet to constitute the central legislature by what, in effect, will be provincial delegations, the majority of whom will hold their seats on the nomination, and at times of re-election at the discretion, of the Provincial Governments and the parties which support them in office, would, in our view, aggravate the tendency to provincial separatism which already exists and endanger the unity of India... In the second place the system inevitably involves the confusion of provincial and all-India issues at times of election with bad results for both central and provincial legislatures....In the third place the system inevitably opens the door to corruption, for it means that each member of the central legislature, which will deal with matters vitally affecting business and finance, will be elected by a number of provincial electors on the average not more than 7 or 8 in number. . . . . Fourthly, the system of electing the central legislature by the provincial legislatures is bound to be extremely intricate and confusing with its combination of electoral colleges elected by enormous constituencies in some provinces with election by the provincial Upper Houses which are themselves elected in part by the Provincial Assemblies, in others. It is likely to be caucus-ridden and it will inevitably make necessary large numbers of provincial bye-elections whenever an election to the central legislature takes place, with possibly unfortunate results on the stability of the provincial ministries. Finally, this form of indirect system involves reversing a system which has already been in operation for the Indian Legislative Assembly not unsuccessfully for thirteen years and which has the support of the great majority of Indian political leaders."

But with their practical contempt for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian public opinion the J. P. C. could not possibly be influenced by the fact of the direct system being supported by the great majority of Indian political leaders.

In their first and second reasons Lord Reading and his two colleagues wanted that members of the central legislature should be men of a National, an all-India, outlook, and not of a merely provincial outlook. But such reasoning could not possibly find favour with the majority of the members of the J. P. C., who wanted to destroy Indian Nationhood and establish separatism and parochialism in its stead.

Inconsistencies in J. P. C. Report

There are so many good principles laid down in the J. P. C. Report with recommendations of an opposite character that it would be difficult to enumerate them. Nor have we space to do so. We must rest content with simply mentioning the fact.

Public Opinion Disregarded, though its Existence is Admitted

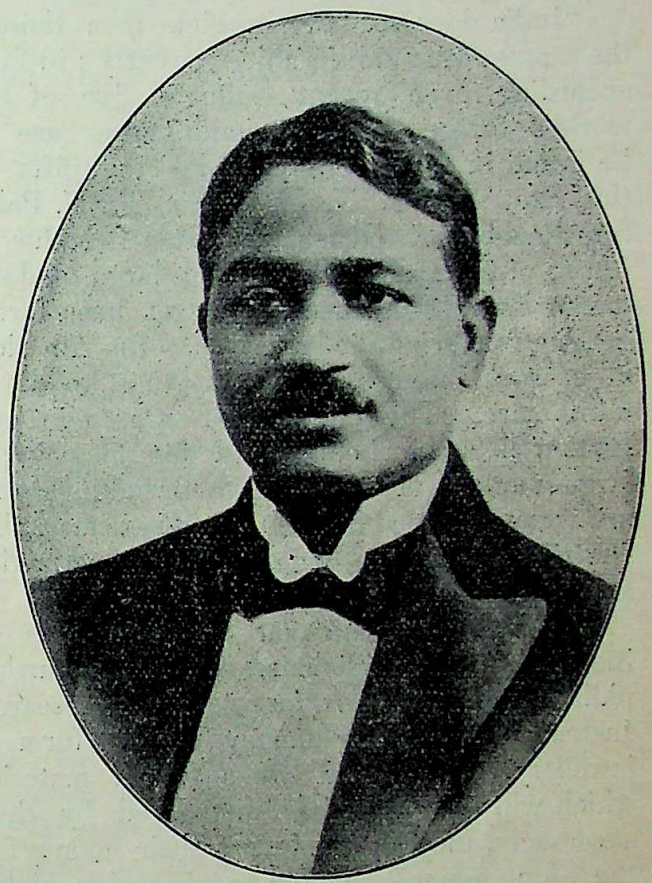
The J. P. Committee recognize the reality of Indian political aspirations, though in a very grudging spirit. They also admit that in India "a public opinion does exist." Yet their contempt for it is so great that, far from accepting to the smallest extent the opinions of the Congress, which represents the largest number of courageous and self-sacrificing politically-minded citizens, the Committee observe :

> "Indeed, we recognize that even moderate opinion in India has advocated and hoped for a simpler and more sweeping transfer of power than we have felt able to recommend. Moreover, it must not be forgotten that there is a section of opinion in India with whom the prospect of agreement appears to be remote."

Is it this that the Committee appear to drive at, that, as there is no chance of placating Congressmen, who alone count, there is no need of rallying the Moderates, who do not count? Whatever the answer to this question may be, the J. P. C. console themselves with the discovery of the emergence of "a body of central opinion." Precious discovery!

Professor S. S. Bhatnagar's Self-Sacrifice

We print below a note by Prof. M. N. Saha, F. R.S., on the munificent donation of Prof. S. S. Bhatnagar for the encouragement of chemical research in the Panjab University.



Prof. S. S. Bhatnagar

"The princely donation of the sum of a lakh and a half of rupees by Prof. S. S. Bhatnagar to the Panjab University is a unique event in the history of education in India. For Prof. Bhatnagar is neither a Rajah nor a millionaire, but comes from the hungry middle class ; he had to struggle through early years of comparative want to his present position as Professor of Chemistry at Lahore, which he won through sheer industry and merit, and, like many other Indian Professors in a like position, he has to provide for his family and numerous poor relations and needy students. The sum of a lakh and a half may not be anything to a millionaire, but is a fortune to Bhatnagar ; but with rare largeness of heart, he has handed over the sum to his alma mater for scientific work.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"There is one unique precedent for such a donation by a teacher of science for the promotion of scientific reseach alone, *viz.*, the gift of Sir P. C. Ray to the Calcutta University, whose example, the writer is informed in a private letter, has been the source of inspiration to Bhatnagar.

"India does not lack in rich men though the masses are sunk in abject poverty ; in fact, according to a recent estimate, five of the world's fifteen foremost millionaires are to be found in India. But, besides the gifts of the late Mr. J. N. Tata, Sir T. N. Palit, Sir Rashbehari Ghosh, and Rao Bahadur D. Lakshmi Narayana of C. P., no large endowments from rich men have yet been forthcoming for scientific research. In America, it is considered to be a disgrace to die a millionaire. The millions of Carnegie and Rockefeller are being used for financing a large number of scientific undertakings and are responsible for the recent remarkable contributions of the United States of America to the progress of Science.

"The gift of Bhatnagar should act as an incentive to our millionaires for making further philanthrophic gifts for scientific research. Instead of hoarding money in the form of jewellery, bullion and other frozen material, which will one day be squandered by their successors, they should invest their money in the young generations, for provision for higher education of the coming generation is the best investment for the future. The writer has the experience of half a generation of young men eager to do scientific work and get a name for themselves and their country. They can give as good an account of themselves as any European or American youth, provided they are helped in their work by gifts and organizations like the Carnegie and Rockefeller Trusts of America."

The "Statesman" on Minorities

In its editorial on the above subject of November 15th last *The Statesman* has probably referred to me in the following words : "We hope that the Professor of Economics who lately accused Great Britain of a violation of international law knows more of economics than he does of international law." But the reference is sadly mistaken both in its form and in its contents. I happen to be a Professor of History whose business is to deal with its sources and documents. A special study of these has led me to the following conclusions :

(1) The States-members of the League of Nations (including India and England) have agreed that "the problem of minorities is to be treated as a matter of international concern and not as a domestic concern of any individual sovereign State."

(2) Those Minorities alone are eligible for protection who form "a considerable proportion of the population," at least 20 to 25 per cent of the population.

(3) The protection of Minorities who satisfy the above numerical test is to be strictly confined only to their linguistic, racial, and religious differences and interests.

(4) Minorities should not be protected to a fault and in a manner which is subversive of the State itself.

These conclusions embodied in regular treaties, known as Minorities Guarantee Treaties, rule out separate electorate and communal reservations of representation.

Sir Austen Chamberlain states these conclusions thus : "It was certainly not my intention or of those who had devised this system of Minority protection to establish in the midst of a nation a community which would remain permanently estranged from national life."

This is echoed thus by another State representative : "We must avoid creating a State within a State. We must prevent the Minority from transforming itself into a privileged caste and taking definite form as a foreign group, instead of becoming fused in the society in which it lives."

The number of complaints being lodged with the League of Nations by European Minorities lead *The Statesman* to conclude that the system is not working well in Europe. It does not know the fact that the complaints are due to supposed violations of the treaties and not to the treaties themselves or their provisions. But the chief source of the complaints lies in the fact that the treaties are treated as being only one-sided, and as binding on one set of Powers, the vanguished in the Great War, and not on the victorious Powers (including

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India and England) who imposed the treaties on the vanquished. The ground of this complaint was admitted both by France and England, who explained that "they have not signed any such Minorities Treaties because they had no Minorities. To find Minorities in France or England, they would have to be created in imagination." Ultimately a compromise was effected by the Victors and the Vanguished by resolving that the States not legally bound by the Minorities Treaties are nevertheless morally bound by their principles in the treatment of their respective Minorities.

The situation was further clenched by Arthur Henderson as President of the League Council by his declaration that "the League's scheme of Minority Protection now forms a part of the Public Law of Europe and of the world."

Perhaps *The Statesman* considers that India is not a part of that world and lies outside the domain of International Law. Perhaps *The Statesman* does not like India to continue as a member of the League with all its cultural burden and international obligations.

RADHA KUMUD MOOKERJI

Congress Victory in the General Elections

In the general elections Congress has proved its claim to be by far the predominant representative organization in the country. In the new Assembly Congress Members, of the Congress Parliamentary Board Party and the Congress Nationalist Party combined, will be the largest single political party.

The New Assembly & J. P. C. Report

The strength of the Congress group in the new Assembly is, no doubt, not such as will enable them to carry any of their motions without the help of members of other groups. But nevertheless they will be a powerful body. And so far as the J. P. C. scheme of "reforms" is concerned, they are likely to be joined by some M. L. A.s of other groups either in wholesale or piecemeal condemnation of it. If such a condemnatory motion be carried in the Assembly, or, in any case, if the majority of elected members vote in favour of such a motion, what will the British Government do? Colonel Wedgwood tried to sound Sir Samuel Hoare on the matter, with no satisfactory result, as the following questions and answers show :

LONDON, Nov. 26.

In the House of Commons Col. Wedgwood asked whether official nominated members of the Legislative Assembly will be authorized to vote on the issue of acceptance of the new Federal constitution.

Sir Samuel Hoare replied, Col. Wedgwood will hardly expect an answer to the question without knowing the terms of any resolution which may be moved in the Legislative Assembly on the subject of constitutional reform.

Col. Wedgwood asked: "May we take it that the measure will not come into force unless passed by a majority of the elected members?

Sir Samuel Hoare:—I cannot give an assurance of that kind. You are raising a hypothetical issue.

Col. Wedgwood: Have you not yet considered that position?

Sir Samuel Hoare: I have considered it and many other questions.

Col. Wedgwood: Have you come to any conclusion?

Sir Samuel Hoare did not reply.

The Cabinet held a special meeting yesterday morning and it is understood discussed the business connected with the Select Committee report.—*Reuter.*

Congress Nationalist Victory in Bengal

All the six seats in the Assembly open to Hindus in Bengal have been won by candidates of the Congress Nationalist party. It shows that Bengal Congressmen are for the unequivocal condemnation and rejection of the Prime Minister's communal decision. The Congress bureaucracy should note this fact. While doing so, they should also bear in mind the fact that Bengal Congressmen have not been backward in undergoing suffering and sacrifice for the Congress cause and that members of the Congress Nationalist party are as much Congressmen as others.

Non-inclusion of Any Bengali Congressman in Working Committee

We do not think the non-inclusion of any Bengali Congressman in the Congress Working Committee was due to any deliberate intention to spite or slight Bengal. But the fact is to be deplored nevertheless. Congress has divided India into twenty-one linguistic provinces, but the number of ordinary members of the Working Committee is only 14. Therefore, the non-inclusion in the Committee of the representatives of at least

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

7 provinces in any year is certain ; and more provinces may be excluded, as generally some provinces have more than one member in it. We have, therefore, urged before, and do so again that the number of C. W. C. members should be raised to 25, or at least to 21. Twenty-five is not a very large number for a large country like India.

The Congress provinces are linguistic provinces. In India the numbers of speakers of the principal languages above two crores are: Hindusthani languages, 121,254,000; Bengali, 53,468,000; Telugu, 26,373,000; Panjabi and Lahnda, 24,660,000; Marathi and Konkani, 21,361,000; Tamil, 20,411,000. The language which is spoken by the largest number of persons next to the Hindusthani languages should not go unrepresented in the Congress Working Committee.

A British Periodical's Appreciation of Dr. Sunderland

Town and Country Review, a London illustrated monthly magazine, has published an appreciative character-sketch of the Rev. J. T. Sunderland, who is by birth an Englishman and by naturalization an American. In India he is generally known as the author of "India in Bondage." There are other facts regarding his life and work which are worth knowing and are reproduced below from the above-mentioned British periodical.

Dr. Jabez T. Sunderland is of particular interest to Englishmen for two especial reasons—he was born in Yorkshire, England, as long ago as 1842, being taken to America by his parents at the age of two years, and as the author of "India in Bondage, ..."

Dr. Sunderland was educated at the University of Chicago, from which he was graduated in 1867 with the degree of B.A. He obtained his Master's degree in 1869, and holds the degree of D.D. of Tufts University.

He was ordained to the Baptist Ministry in 1870, and has been pastor at a number of important churches in the United States and Canada. He went to India in 1895 on commission from the British Unitarian Association to study and report upon the educational, social and religious conditions of the Indian people, and has been the non-resident Lecturer on sociology and the religions of India in Theological Schools in Meadsville, Pennsylvania, and Canton, New York. Since his return from India he has been a devoted student of Indian History, Literature, Art, Civilization, and especially Social, Political and Economic Problems.

In 1913-14, he was Billings Lecturer of the American Unitarian Association to India, China and Japan. While in India, was president of the All-India Theistic Conference. Has been President of the India Information Bureau of New York (1918-22); Editor of Young India (New York, 1918-21), and President of the India Society of America (1923-28). Is now Honorary President of "The American League for India's Freedom" and Vice-President of "The All-World Gandhi Fellowship." He contributes extensively to Indian periodicals, and is the author of twenty books, five of which are published in India. . . . . .

In other schools of thought and teaching, Dr. Sunderland has also been active. In his early Ministry, he established, and for twelve years edited "The Unitarian," a monthly magazine which obtained a large circulation among the Unitarian Churches of the United States and also a considerable circulation in England. In this connection he is the author of "What Do Unitarians Believe?" a statement which he wrote and had printed in Ann Arbor, Michigan, for use in connection with his student work there, and 85,000 copies were circulated before the booklet was published by the American Unitarian Association (25, Beacon Street, Boston) who now issue it as No. 11 of their publications, the pamphlet, which has reached a circulation of more than 300,000, being made available through the fund for the distribution of free literature. Copies may therefore be obtained from the American Unitarian Association.

Dr. Sunderland has written profusely since 1878, when he produced "A Rational Faith" and "What is the Bible?" right along up to 1925 when his "Evolution and Religion" was published. His two religious books which are the most popular and have the largest sale are his "Origin and Character of the Bible" and "The Bible and Bible Country." The former has been translated into the Russian and Bulgarian languages.

As might be expected, Dr. Sunderland has always been deeply interested in Foreign Missions. No other Unitarian has done so much to carry liberal Christian thought to the Orient. During all of his ministry Dr. Sunderland has laboured steadily to bring lovers of religious liberty into sympathy and co-operation. His pulpit exchanges have been not only with Unitarians, but with Universalists, Liberal Jews and to some extent with liberal ministers of orthodox churches.

He has always secured a great following. In Toronto his Sunday evening addresses were such as to give him the unique experience of being visited by the Chief of Police and informed that unless measures were taken to overcome the crowding of his church, the law would be enforced upon him and his congregation!

Lord Zetland on the Communal Decision as Affecting Bengal

It appears from the proceedings of the Joint Select Committee, June 29, 1934, that the Marquess of Zetland (formerly Lord Ronaldshay, ex-Governor of Bengal) moved an amendment to lessen the injustice done to Bengal Hindus—particularly the "caste" Hindus

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by the Communal Decision and the Poona Pact combined. Nine members, including Lord Zetland and Lord Lytton (ex-Governors of Bengal), Lord Hardinge (ex-Viceroy) and Sir Reginald Craddock (ex-Governor of the Central Provinces), voted for the amendment. Fourteen members, including two ex-Viceroys, who had no experience of Bengal, voted against it. So the amendment was lost. The amendment and the reasons for it are to be found in the paragraphs, pp. 338-341 of part ii, vol. i of the J. P. C. Report, quoted below. They are long, but will amply repay perusal. It will be seen that Lord Zetland's arguments are in many cases the same as those which we have urged in these columns.

("121. We have found ourselves in some difficulty in dealing with this aspect of the problem, owing to the declaration of the Government, referred to in paragraph 119, that they would entertain no suggestions for the alteration of their Award which had not the support of all the parties affected, and we might well have felt justified in the circumstances in holding that the matter was one which had been placed beyond our purview. This course was rendered difficult however, by the representations of those who desired to give evidence before us, as to its effect upon the development of responsible self-government particularly in the Presidency of Bengal; and by deciding, as we did, that such evidence was admissible, we automatically brought the matter within the scope of our enquiry. The original Award was strongly criticised by more than one witness who appeared before us on the ground that it must operate inequitably in the case of Bengal; and it was urged that the disadvantage at which the caste Hindus would be placed under it would be greatly intensified as a result of the adoption of the Poona Pact. Particular objection was taken to the reservation of seats and the employment of separate communal electorates in a province in which the community in whose interest the reservation is made forms a majority of the population. We cannot but be impressed by the force of this contention and we think it desirable that we should set forth our views as to the purpose for which the reservation of seats and the device of separate electorates should be employed.

"The system was introduced at the time of the Minto-Morley Reforms of 1909 with a view to safeguarding the interests of minorities and in particular the Moslem Minority; and while, on general grounds, we may deplore the necessity for such a device we have reluctantly come to the conclusion that in existing circumstances in India the necessity persists. We do not, therefore, propose to elaborate the objections which may be urged against the system as a whole. But it is one thing to concede separate communal electorates for the purpose of giving Minorities reasonable representation in the various legislatures; it is an entirely different thing to employ the system for the purpose of conferring upon a majority community in any particular province a permanent majority in the legislature unalterable by any appeal to the electorate. Such a course has never hitherto been adopted. It was considered and rejected by the Statutory Commission, who declared that a claim submitted to them which in Bengal and the Punjab would give to the Moslem community a fixed and unalterable majority in the *general constituency* seats, was one which they could not entertain; 'it would be unfair', they wrote, 'that Muhammadans should retain the very considerable weightage they now enjoy in the six provinces and that there should at the same time be imposed, in face of Hindu and Sikh Opposition, a definite Moslem majority in the Punjab and in Bengal unalterable by any appeal to the electorate.' This is the position which will arise if the distribution of seats proposed in the White Paper for the Legislative Assembly of Bengal, is given effect to. The Legislative Assembly is to consist of 250 seats. Of these 51 are allotted to Special interests, leaving 199 general seats. Of these general seats 119 are to be reserved for Moslems leaving 80 for the Hindus. But under the terms of the Poona Pact 30 of these 80 seats are to be reserved for the so-called depressed classes, hereafter to be known as the Scheduled Castes, and the number of general seats open to the Caste Hindus is thus reduced to 50. It is probable that in the case of the 20 special interest seats which are open to Moslems and Hindus, the great majority will fall to the Hindus; but even if the Caste Hindus were to secure the whole 20 seats they would still be arbitrarily limited by Statute to 70 seats in a Legislative Assembly of 250. To restrict in this way the possible share in the government of the province, of the community which plays a predominant part in its intellectual and political life, seems to us to be both unwise and unfair. Before making our recommendations we have one further comment to make on the effect in Bengal of the Poona Pact. The object of reserving seats for the depressed classes should be in our view, to secure to the real depressed classes—that is to say the Sudras, or outcasts—a voice in the legislature. We believe that in Bengal the number of such people is small; and we fear that the result of extending the list of scheduled castes as proposed in the White Paper, will be to defeat the object in view, for it will not then be members of the real depressed classes who will be returned for the Scheduled Caste Seats, but members of the powerful Namasudra and Rajbansi Castes who experience no difficulty in getting returned to the legislature even now without any reservation of seats at all, and whose interests are as much opposed to those of the untouchables as are the interests of the highest castes themselves.

"We have now to submit our recommendations. With the Moslems in a majority in any particular province, we think that no reservation of seats for them ought to be necessary, and the logical solution of the problem would be to make no provision for a separate Moslem electorate but to throw the whole of the *general* seats open to Moslems and Hindus, so that candidates whether Moslems or Hindus would have to stand on their merits and make their appeal to the electors at large. We realise, however, that in this case that which is desirable is not necessarily expedient and we feel constrained to suggest a less radical alteration. We therefore, recommend as a general principle that in any province in which seats are reserved for a community which constitutes a majority of the population, a decision whether election in the case of the general seats, including

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

those reserved for the majority community, should be by separate or by joint electorate, should rest with the minority.

"There remains the question of the Poona Pact. We need not recall the circumstances in which the so-called pact was concluded. We do not think that those who were parties to it can be said to have been accredited representatives of the caste Hindus or to have possessed any mandate to effect a settlement. We think that the arrangements for the representation of the depressed classes contained in the original award of His Majesty's Government were preferable and we recommend their adoption. In the appropriate place we give tables setting forth the distribution of seats in the legislatures in accordance with our proposals.

"Apart from the general alteration in the distribution of seats due to a return to the original Communal Award in the case of the Depressed Classes, our proposals involve some further redistribution of the seats in the case of the Legislative Assembly of Bengal and we think it desirable to explain here the reasons for the alteration which we propose. Under the proposals contained in the White Paper the Assembly in Bengal will consist of 250 members. Of these 250 seats 51 will be reserved for the representation of special interests, leaving 199 general territorial constituencies. Of these general seats 119 are to be reserved for Moslems leaving 80 only for the Hindu community including the Depressed Classes. Since the population ratio is approximately 55 per cent. Moslem and 45 per cent. Hindu it follows that so far as the general territorial constituencies are concerned the Moslems are being given ten seats more and the Hindus ten seats less than they would be entitled to on a population basis. It is true that this disparity will almost certainly be lessened as a result of the elections to the special interest seats which will be open to Moslems and Hindus. These number 20 and various estimates of the proportions of them which will be won by Moslems and Hindus respectively were submitted to us in the course of the evidence which was laid before us. We think that the Moslems may be expected to secure six of the 20 seats, which would bring their total representation up to 125 seats as compared with 94 seats in the case of the Caste Hindus and the Depressed Classes taken together. But even supposing that the Moslems were to secure none of the 20 seats they would still fill 119 seats as compared with 110 which is the maximum number of seats open to the Caste Hindus and the Depressed Classes combined under the proposals of the White Paper.

"We have already stated our objections to conferring upon a community by statute a definite majority unalterable by any appeal to the electorate. When the relative position of the two communities in Bengal in everything except actual numbers is taken into account, it will be seen that the reasons against placing the Hindu community in a position of permanent statutory inferiority in the legislature are particularly strong. Under British rule the Hindus have played an enormously predominant part in the intellectual, the cultural, the political, the professional and the commercial life of the province. More than 64 per cent. of those who are literate in Bengal are Hindus; nearly 80 per cent. of the students attending High Schools, nearly 83 per cent. of those in Degree classes, and nearly 86 per cent. of the postgraduate and research students are Hindus. A similar preponderance is found in the case of the professions, and in the case of Banking, Insurance and Exchange. In all previous Constitutions the significance of these facts has been admitted. Under the Lucknow Pact (an agreement between Moslems and Hindus arrived at in 1916) the Moslems in Bengal were allotted no more than 40 per cent. of the seats proposed to be filled by Indians by election; and under the Constitution now in force there are reserved for them only 46 per cent. of the general territorial constituencies.

"In the circumstances set forth above we should have felt justified, had the slate upon which we have to write been a clean one, in recommending that in Bengal all general territorial constituencies should be open to candidates of both communities without reservation of seats or separate electorates (except in the case of the 10 seats reserved for the Depressed Classes). But as we have already pointed out, the slate upon which we have to write is very far from being a clean one, and we have felt obliged to steer a middle course between the claims of the Hindus and the expectations which have been aroused in the minds of the Moslems. Broadly speaking, as will be seen from an examination of the Appendix, the effect of the changes which we proposed in the scheme of the White Paper will be as follows:—

(1) To give to Moslems or to Hindus, whichever is the minority community in any particular province, the right to decide whether election in the case of the general territorial constituencies shall be by separate or by joint electorates;

(2) In the case of Bengal to allot the general territorial seats between Moslems and Hindus on a population basis; and

(3) To give to the Depressed Classes in all provinces the representation given to them by the Government under their original Award before it was modified by the Poona Pact.

There is one other point to which we wish to refer. Under the provisions of the White Paper* no change in the distribution of seats under the Communal Award is to be made during the first ten years during which the Constitution is in operation, and thereafter no proposals for modification will be taken into consideration which do not carry with them the assent of the communities affected. We think that it is unlikely that such assent will be given by a community entrenched in a position of statutory superiority in the legislature; and we recommend, therefore, that it should be open to either community at the expiration of ten years to petition Parliament to modify the Award.")

The only change in the Communal Decision to which the J. P. C. have agreed is contained in the following words of their Report (p. 68, part i, vol. i):

". . . . . objections to the (Poona) Pact in relation to Bengal have since been strongly urged by caste Hindus from that Province; and if by agreement between the communities concerned, some reduction were made in the number of seats reserved to the Depressed Classes in Bengal, possibly with a compensatory increase in the number of their seats in other Provinces where a small addition

* Paragraph 49 of the Introduction to the White Paper.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in favour of the Depressed Classes would not be likely materially to affect the balance of communities in the Legislature, we are disposed to think that the working of the new Constitution in Bengal would be facilitated."

We may be permitted *now* to quote the following extract from a letter written to us by Mr. C. F. Andrews on September 27, 1934 :

"Last year when I left Allahabad I tried my utmost to help in the two matters I mentioned to you—the excess of European seats and the excess of Harijan seats, which reduced the Hindus of Bengal to an insignificant minority compared with the number of seats in the Council. I saw different Europeans about their excessive number of 25, but found very little response. Dr. Ambedkar agreed with me about the excess in Bengal of Harijan seats and was prepared to surrender some of them if other provinces would add to their own numbers . . . As you know, I took up these points purely because of the injustice which was to me so flagrantly apparent in the present position."

It may be added that Mr. Andrews was convinced as regards the injustice after he had listened to our arguments and seen some official papers placed before him by us at Allahabad. It will be noticed that the amendment which the J. P. C. are prepared to accept is the same to which Dr. Ambedkar agreed. It is not known whether Sir Samuel Hoare consulted Dr. Ambedkar.

Pandharpur Orphanage and Asylum for Homeless Widows

Pandharpur is a well-known place of pilgrimage in the Bombay presidency. But many widows who, falling victims to seduction, become mothers, go there for a different purpose. Hence many foundlings have to be provided for in that place. Moreover, those widows who are not taken back into their homes by their relatives after delivery have to be given shelter and maintained. The orphanage and asylum at Pandharpur serve these very humane and philanthropic purposes. They require new buildings, for which funds are needed. We cordially associate ourselves with the Appeal issued for the purpose, which will be found printed among advertisements in this issue.

Indian Women's University

If education has made insignificant progress among the population of India in general, its progress among our girls and women is still more unsatisfactory. Hence, whatever differences of opinion there may be as to co-education or separate education for the sexes, the same curricula or partly different curricula for them, and the same universities or different universities for men and women, advantage should be taken of all methods, curricula and institutions. The Indian Women's University of Poona and Bombay, founded by Professor D. K. Karve, who has devoted himself to the cause of women's education during his long life with exemplary self-sacrifice, persistence and industry, is an institution worthy of every support. Owing to the interest of the donation of Rs. 15 lakhs made to it by the late Sir Vithaldas D. Thackersey having been withheld, the university has had huge deficits during the last few years. For this reason, public support has become all the more necessary. An appeal for help has been issued signed by many well-known public men. It has our entire support. It will be found printed among the advertisements in this issue.

Professor Dwijadas Datta

Professor Dwijadas Datta of Comilla died last month at the age of 82 years. He was active till the last. After obtaining the degree of M. A. of the Calcutta university he proceeded to England as a State scholar to receive education in agriculture at Cirencester College. On returning to India after finishing his education there, he was appointed a Deputy Collector. Later he became a professor at the Government Engineering College at Sibpur. He was a great friend of the peasants and supported peasant proprietorship of land. He wrote a series of articles on the cultivation of jute in the Bengali monthly *Prabasi*, which were later published in book form, in which, among other things, he showed that the jute crop was not really profitable to the peasants, as they did not generally get more than their wages as labourers and the cost of maintenance

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of their plough and cart cattle—sometimes they did not get even that. He wrote from personal knowledge and experience.

He was a great scholar and had a sound knowledge of Sanskrit and Arabic. He devoted the last years of his life to showing that there was essential harmony between the Vedic teachings of Hinduism and the teachings of the Koran. He was a man of sterling independence and purity of character.

B. N. Sasmal

It is a tragedy that just when the election of B. N. Sasmal, barrister-at-law, to the Assembly by a large majority of votes was announced he had an attack of apoplexy and passed away after hovering between life and death for six days. His death at the present juncture is a great loss to the public life of the country—particularly to his native district of Midnapur in Bengal, for which he worked so hard and suffered so much, including imprisonment. His leadership in his own district during Non-co-operation days was so effective that the district magistrate had to pass an order prohibiting him from entering it.

At public meetings and at a meeting of the Calcutta Corporation eloquent tributes have been paid to his worth. Presiding over a meeting convened by the All-Bengal Radical Party, Mrs. Nellie Sen Gupta said in part:

> Birendranath, a born fighter all his life, fought unfailingly in the cause of truth and justice. In the pursuit of truth he had occasionally to alienate his best friends and devoted colleagues. But that did not matter to him. To him truth was far above all the rest.
>
> For the maintenance of the right of his people Sasmal was always in the forefront of the struggle. So long as he realized that to be a true and just cause he never gave it up. Nothing could move him from that. Whenever the oppressed and down-trodden cried for help Birendranath with his indomitable courage stood out against the oppressor. To the afflicted and distressed he lent his helping hand without fail.
>
> His victories were great. Two years ago he had won a remarkable victory in the Corporation election. A few days ago he won another victory.
>
> Birendranath was a great friend of both the Hindus and the Mahommedans. In him there existed no communal feeling. In his death the Mussalmans had lost a true ally.
>
> It was disastrous that we had lost him at such a moment when the country's need for him was the greatest. It seemed our destiny to lose our leaders when their need was the most.
>
> Striking a personal note the president referred to the day when in 1923, after the memorable Assam-Bengal Railway strike she with her illustrious husband was met at the steamer station by Sj. Sasmal. During the non-co-operation movement, when enthusiasm was at its height, in response to a query from Deshapriya whether all those sacrifices would not lead them to the goal Sj. Sasmal decisively replied, "No, we are to go through tremendous sacrifices before we attain Swaraj."
>
> All through his life Birendranath never bowed down to anybody; in death too he kept his head erect.

At the Calcutta Corporation meeting, Mr. Nalini Ranjan Sarker, the Mayor, observed in part:

> In party politics many of us, and I am one of them, have exchanged blows with Mr. Sasmal; but he was as great in dealing one as he was generous in enduring another. Mr. Sasmal will be respectfully and affectionately remembered even by his opponents as a kind and sincere friend. His supporters and followers will cherish him as a valiant comrade with whom it was a privilege and pride to work.
>
> In all his actions Mr. Sasmal was unconcerned about being unpopular whether inside his party and with his fellow-workers or with the outside public, if he felt his cause to be right. He was the last man ever to temporize. And in these circumstances his enormous hold on his supporters, his acquisition of an authoritative position in the political circle, and the respect he commanded from his opponents as well, were truly remarkable. Even in the work of the Corporation we have found that he knew no deviation or compromise, and he used to insist always on his own method. Divergence of opinion and adoption of different methods are inevitable in politics, as in almost every other walk of life, but Mr. Sasmal will be respectfully and affectionately remembered even by his opponents as a kind and sincere friend. His supporters and followers will cherish his memory as a valiant comrade with whom it was a privilege and pride to work.
>
> I think I express the sentiments of you all in saying that the outstanding quality of Mr. Sasmal's character, which, in fact, guided all his actions was that in any matter, big or small, he was absolutely unbending and unflinching, irrespective of any consequence to himself when he knew or believed in its justice or correctness. Such straightforward and unequivocal honesty of purpose, such fearlessness in giving expression to his own opinion, even if it pushed him to the borderline of being disregarded, are not the qualities very frequently to be observed in the public life of the country. In our present conditions particularly, I feel, such plain speaking and straight action according to conviction have become quite imperative. Mr. Sasmal's example, I hope and trust, will bear fruit.

Mr. Sasmal's compatriots of his own district of Midnapur did not yield to any one else in their appreciation and praise of their leader. At a condolence meeting, his worthy rival for the seat in the Assembly, Mr. Manmathanath Das, said:

Sj. Sasmal was Midnapore's guardian angel, always protecting her against all dangers and difficulties. He was Midnapore's trusted friend and leader—one to whom the people of Midnapore could look forward with confidence to give them a helping hand in their troubles and difficulties. Sj. Sasmal had no parallel: He was a type by himself and could be compared to himself alone. What was most striking about him was his indomitable will and grim determination to do what he thought right in the face of all difficulties and obstacles.

Chinese Attack On Mount Everest

SHANGHAI, (By Mail).

Armed with a letter of introduction from the Panchenlama to the Tibetan authorities, four young Chinese explorers have left Peiping for Tibet with the avowed intention of climbing Mount Everest, the highest peak in the world. They expect to be gone for about six months. The youthful explorers intend also to study the customs and modes of living of the people in China's border districts.—*Reuter.*

The example of these four enterprising Chinese young men ought to inspire some Indian young men—particularly those who live nearest to Mount Everest—to do likewise.

No Contribution for Bihar Relief from British Exchequer "Necessary"!

LONDON, Nov. 26.

Questioned by Mr. Morgan Jones (Lab.—Glamorg.) in the House of Commons today, Sir Samuel Hoare (Secretary of State for India) replied that he did not think it necessary to ask the British Exchequer for a contribution towards relief of the victims of the earthquake in North Bihar.

Sir Samuel Hoare said that no request had been made to him in that connection, but, even if it had been made, he would say that it was not necessary to accede to it. He pointed out that, in addition to £690,000 voluntarily subscribed, large sums were being sent to the Government of Bihar and Orissa from the Central India Exchequer and there was no reason to suppose that adequate funds would not be available.—*Reuter.*

British contributions for Bihar relief, including that by His Majesty King George V., have not been commensurate with Britain's wealth or Bihar's sore need. The £690,000 voluntarily subscribed has not come from Britain. That the British Exchequer would not be asked to contribute, and would not contribute even if asked, was known too well to require to be stated. But it is not at all correct to say that adequate funds would be given from the Central Indian Exchequer.

Pandit Tarakeswar Ganguli

By the sudden and untimely death of Pandit Tarakeswar Ganguli the Mayurbhanj State in Orissa has lost a devoted servant and true friend. He worked as confidential adviser to His Highness the present Maharaja and his predecessor. He did much in various ways to enable them to attain a higher status. In their domestic matters, too, his wise advice and exertions could always be counted upon. He was directly instrumental in making known to the public the ancient contribution of Mayurbhanj to Indian architecture and sculpture.

Allahabad University Music Conference

The fifth session of the Allahabad University Music Conference opened formally on the 5th November last at the Senate House. Mr. Sachchidananda Sinha presided and Sir J. P. Srivastava, Minister for Education, inaugurated the conference. In concluding his inaugural speech, the Minister observed :

"The present need is propaganda. Such a conference as this annual conference of the Allahabad University does much to popularise the art, and during the five years of its existence it had accomplished a great deal in this direction. I hope that it will go from strength to strength, year by year attracting more musicians to demonstrate their genius." Concluding he paid a tribute to Dr. Bhattacharya.

Mr. Sinha observed in the course of his address :

'Of the importance of music in a system of education the ancient Greeks had no doubt. They divided education into the two branches, of gymnastic and music, and these, they held, should be so balanced and proportioned that the man should become a harmonious whole.'

'You have had for the past several years music classes here, and you hope before long to institute, I understand, a diploma in music. In the West, as you are doubtless aware, several universities award even doctorates in music. It is my fervent hope that, in the fulness of years, here too music will form a subject for a University degree.'

'To Dr. Dakshina Ranjan Bhattacharya, who has so successfully organized these conferences, our thanks are due in special measure and I am sure you all will join me in conveying to him our sense of appreciation of his great work in this matter.'

Before distributing the prizes to the winning competitors Kunwar Jagdish Prasad, the Home Member, made a brief speech, in the course of which he said, among other things :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There were certain things which were lacking for the proper development of music, in this province. The absence of a faculty of music in the University was the one disadvantage.

Another point which the speaker impressed upon the audience was that in their desire to propagate the art of music they should not forget the professional. In the West unless people devoted their whole life to the profession of music, no advance was possible. All that they had to see was that the profession was not only lucrative but honourable.

In conclusion, Kunwar Jagdish Prasad paid a tribute to Dr. Bhattacharya for the labour and care which he had taken in organizing the conference.

As the result of the competitions, the Bhattacharya family was again judged to be the best and was awarded the best musical institution prize, having secured 78 marks. The second and third institution prizes were awarded to the Allahabad University and Crosthwaite Girls' College, which secured 51 and 32 marks respectively. The teachers' first prize was given to Prof. Shankar Rao Tewari (46 marks) and the second prize to Mr. Har Narain (28 marks). —*The Leader.*

The number of competitors who enrolled themselves for competition was over 300, of whom about 100 were declared to be prize winners. Nearly a hundred musicians, amateur and professional, from all parts of India attended the Conference. The following competitors secured over 70 per cent. marks:

Class I. Vocal.
1. Miss Shanti Lata Banerji.
2. Miss Provabati Mittra.
3. Miss Shantana Bhattacharya.

Dancing.
1. Miss Shantana Bhattacharya.

Sitar.
1. Miss Usha Devi Govila.

Class II. Violin.
1. Master Samir Kumar Banerji.

Dancing.
1. Master Niranjan Bhattacharya.

Class III. Dancing.
1. Miss Maya Bhattacharya.
2. Miss Shova Bhattacharya.

Sitar.
1. Miss Renuka Saha.

Class IV. Vocal.
1. Master Sudhir Lal Chakravarty.

Harmonium.
1. Master Hem Chandra Joshi.
2. Master Jagdish.

Tabla.
1. Master Phulu Mukerji.
2. Master Hem Chandra Joshi.
3. Master Nishitesh Banerji.

Class V. Vocal.
1. Miss S. Champak Lakshmi.

Class VI. Vocal.
1. Mr. N. R. Bhattacharya.

Tabla.
1. Mr. Suraj Kumar Paul.

Sitar.
1. Mr. N. R. Bhattacharya.

Sarod.
1. Mr. Radhika Mohan Moitra.

Class VII. Vocal.
1. Mr. Chandra Shekhar Pant.

Tabla.
1. Mr. S. R. Bhattacharya.

Class VIII. A. (a) Vocal.
1. Kumari Gouri Rani Ghosh.
2. Miss Binapani Mukerji.

Harmonium.
1. Miss Binapani Mukerji.

Class VIII. A. (b) Vocal.
1. Miss Susama Dey.

Harmonium.
1. Miss Bindubasini Roy.

Class VIII. B. (a) Vocal.
1. Master Devi Prasad Bhattacharya.

Class VIII. B. (b) Vocal.
1. Mr. Rathindra Nath Chatterji.
2. Mr. K. C. Majumdar.
3. Mr. V. J. Joshi.

Pakhawaj.
1. Mr. Pratap Narayan Moitra.

Tabla.
1. Mr. Anath Nath Mukerji.
2. Mr. Gyanada Nath Majumdar.

Baroda Government's Lead

BARODA, Nov. 17.

The Government of Baroda have issued orders asking the public and State servants to show the defects of the working of Government Departments and suggest constructive proposals.

The Government have also issued a notification asking for support of the public to stamp out the evil of Ankfarak Gambling.

The Government, it is understood, propose to enact a Bill for regulation of building of religious institutions in order to ensure complete communal harmony. Orders have also been issued to the person or persons controlling religious funds to submit details of receipts and expenditure to the Government.—(*United Press*).

Government Interference in Jubbulpore Municipal Affairs

NAGPUR, Nov. 17.

The Central Provinces Government has announced to-day that the Jubbulpore Municipality has been excepted from the application of certain provisions of the C. P. Municipalities Act and new rule framed whereby the president of the said committee shall be appointed by the Government. Accordingly Pandit Dwarka Prasad Mishra has been removed from office and Rai Saheb Murli Manohar Prasad Seth, E. A. C., Jubbulpore, has been appointed president of the committee.

This development is the sequel to Pandit Mishra's refusal to carry out Government's order reinstating Mr. Sharma, Secretary to the Municipal Committee, in the place of Mr. N. N. Sil.—(*A. P.*).

JUBBULPORE, Nov. 17.

After a constitutional struggle for the last five days by Mr. Dwarka Prasad Mishra, President of the Jubbulpore Municipality, who refused to carry out the orders of the Local Government reinstating Mr. Chiranjilal Sharma as Secretary while the C. P. Municipal Act existed in its present form, curtain was at last rung down this evening by removal of Mr. Dwarka Prasad Mishra from presidentship.

Interviewed Mr. Mishra stated that it was no occasion to express regret for his removal from presidentship and Government's action was a confession that whatever he had done was strictly in accordance with the provisions of law.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. Mishra further stated that this ordinance in the shape of Government notification had deprived the local Municipality of the right to elect its chairman. This undoubtedly was Government's admission of the confidence reposed in him by the local tax-payers.—(United Press).

Government action in the Central Provinces in this matter has been arbitrary. If the C. P. Government thought that Mr. Mishra had acted against the law, they ought to have asked the Jubbulpore Municipality to elect another president after he had been removed.

Is the Simon Commission Report Free From Mistakes ?

The Report of the Joint Parliamentary Committee on Indian Reforms opens with the following statement :

"The conditions of the problem with the examination of which we have been entrusted are brilliantly described in the comprehensive survey which forms Volume I of the Report of the Statutory commission. We are not aware that the accuracy of this survey has been impeached, and we are content to take it both as the starting point and the text book of our own investigation." [P. 1, Vol. I, Part 1.]

The Simon Commission's two volumes do contain several serious mistakes. Some of them have been noticed in official publications, and many more in non-official criticisms. When the J. P. C. say : "We are not aware &c." challengingly, we poor Indians may take them not to have read even the official documents.

We shall give one or two examples below :

The Simon Commission in Vol. I, Part III, Chapter 6, dealing with "the course of Indian Politics since 1920 in the light of the Reforms," says with regard to the Central Provinces at p. 260, paragraph 215 :

"The Third Central Provinces Council met in January, 1927. A Ministry was appointed, but lasted only a few days. Once more the transfer of subjects was suspended, and all departments were administered by the Governor-in-Council up to February, 1928. Since then there have been two Ministries with an interval, during which dyarchy was again suspended."

This they were penning in London on the 12th May, 1930.

The Chief Secretary to the Central Provinces Government writing on the 12th August 1930, in the Views of the Local Governments on the Recommendations of the Simon Commission, says :

"The statement in paragraph 285 of Volume I of the Commission's report that the ministry appointed in January. 1927, in the Central Provinces lasted only a few days is incorrect. The ministry lasted for nearly two years. It is not necessary to elaborate the matter, but the Commission has missed the *whole point* of the constitutionally interesting Central Provinces experience." [See p. 368, foot-note.]

The italics are mine. What a fine compliment to the Simon Commission after their two years' tour in India !

The Bihar and Orissa Government, in their Views of the Local Governments, &c., at p. 347, say :

"The local Government notice that in the second volume of their Report, the Commission have omitted Angul from the list of backward tracts in this province. This omission must be due to inadvertence, as parts of Angul, particularly the Khondmals, are among the most backward parts of the province."

J. M. DATTA.

Sloyd in Santiniketan

We are glad to learn from *Visva-bharati News* for November that the Sloyd Association of Sweden has sent Miss Jeanson with a full complement of looms, instruments, etc., for running the Sloyd department in Santiniketan. Sloyd is a system of manual training, originally Finnish, which has made great progress in Sweden.

"The Mother of Parliaments"

Englishmen generally think and say that their parliament is the mother of all parliaments elsewhere. But Swedes claim that they had parliamentary institutions before the British parliament came into existence. A note received from the *Swedish International Press Bureau*, dated October 24, 1934, says :

"Sweden could celebrate the thousandth anniversary of parliamentary institutions in the time of Gustav Vasa (400 years ago)," declares Professor Sune Lindqvist in an interview in a Stockholm newspaper.

The Professor has carefully sifted the evidence of archæological research and of old chronicles. He has rejected all conclusions which he considers based on insufficient evidence.

All-Inaia Bengali Cultural Conference

The annual conference known by the name of "Prabasi Banga-Sahitya Sammelan" is really an all-India Bengali

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cultural conference in which Bengalis residing in different provinces in India take part. The proceedings are conducted and addresses delivered, poems recited or read and papers read in Bengali. The conference is non-political and non-sectarian. The subjects of the speeches and papers are Bengali language and literature, science, philosophy, history, arts and crafts, music, pedagogy, journalism, economics and industry, Bengali settlers outside Bengal, etc.

This year the conference will be held in Calcutta on the 27th, 28th, 29th and 30th of the current month of December. Sir Lal Gopal Mukherji, retired Judge of the Allahabad High Court, will preside. Besides the general president, there are sectional presidents. The sectional presidents so far selected are: Literature, Mr. Kedarnath Banerji, novelist and story-writer; Science, Professor Dr. Biman Bihari Dey, Presidency College, Madras; Economics, Professor Dr. Bhanubhushan Das Gupta, Lecturer, Colombo University, and Secretary, Ceylon Banking Commission; Arts and Crafts, Mr. Devi Prasad Roy Chaudhuri, Principal, Madras Government School of Arts; Journalism, Mr. Suresh Chandra Bhattacharjee, Editor, *The Rangoon Mail*, Rangoon; Pedagogy, Professor Dr. Subimal Chandra Sarkar, Head of the Department of History, Patna University; History, Professor Dr. Bijan Raj Chatterjee, Meerut College; Philosophy, Professor Nishi Kanta Sen, Registrar, Delhi University; Ladies Section, Srimati Sailabala Devi (Mrs. J. K. Sen), New Delhi.

Dr. Rabindranath Tagore will open the conference, which will be held in the Calcutta Town Hall. Mr. Ramananda Chatterjee has been chosen chairman of the reception committee.

The League of Nations' System of Minorities Protection

The Statesman in its leader of the 15th November last referred to what the Polish delegate to the Assembly of the League of Nations "recently" said at Geneva with regard to the League's system of minorities protection. We reproduce below the whole passage in the League of Nations' *News for Overseas*, September, 1934, devoted to the subject of Minorities discussed in the recent fifteenth Assembly of the League:

> The question of universalising the system of minorities protection provoked considerable discussion at the Assembly. A proposal to this effect was submitted by the Polish delegation, which argued that it was unfair that this system should apply only to certain States and added that until other countries accepted similar obligations the Polish Government would not co-operate in the application of the minorities treaties. This led to statements by the British, French and Italian delegates, who pointed out that the minorities treaties were concluded between Poland and certain other countries at the Peace Conference and that these countries could not admit the right of unilateral repudiation. Repudiation was not, however, they added, a construction that need necessarily be put upon the Polish statement.
>
> In the subsequent discussion, the Polish representative said he would not press for a vote on the universalisation of the minorities system or even its extension to the whole of Europe, because it was clear that although there was considerable support for the proposal there was also a good deal of opposition.

Explorations in Sind

We welcome the publication of *Explorations in Sind* by Mr. N. G. Majumdar, M.A., Assistant Superintendent, Archæological Survey of India, being No. 48 of Memoirs of the Archæological Survey of India. Ever since the discovery, as a pre-historic site, of Mohen-jo-Daro and its excavation by the late Mr. R. D. Banerji, following the excavation of and unearthing of finds in Harappa by Rai Bahadur Daya Ram Sahni, the "Indus Valley Civilization," as it has been called, has excited great curiosity. Since then explorations and excavations have been made in Sind and Baluchistan by several archæologists, Indian and European. The work of the Indian officers of the department has not been less important than that of the European archæologists. We are here concerned with Mr. N. G. Majumdar's work. Without intending to anticipate the views of what qualified reviewers will say of his achievement in our pages, we may be allowed to observe that he has shown great capacity for spotting, exploring and excavating sites. His labours have yielded splendid results, as set forth in the very well got-up and fully illustrated volume before us.

Considering the work done by the late Mr. R. D. Banerji, Rai Bahadur Daya Ram

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sahni, Mr. K. N. Dikshit, Mr. N. G. Majumdar and others, we do not see any reason for the Government of India's giving licences to foreign archæologists to explore and excavate sites and carry away precious finds out of India. Our archæologists in India are quite competent to do such work. The expense, too, is not at all prohibitive. In fact, considering the value and importance of archæological work, the expense is insignificant.

Our universities should train every year a few postgraduate students in archæological work. Some Indian States have archæological departments of their own, and no State of even moderate size should be without one. It is satisfactory, therefore, to note that Baroda has added an archæological department to its existing educational, historical and cultural departments.

Does Homage to Soviet Flag Amount to Sedition ?

On the 24th of November last Mr. Sukumar Sen, I. C. S., Chief Presidency Magistrate of Calcutta, acquitted Mr. Niharendu Dutta-Majumdar, Bar-at-Law, and four other labour leaders of the charge of conspiracy to commit sedition and class hatred for their having hoisted the Soviet Russian Flag at the last annual conference of the Port and Dock Workers' Union held on April 29 on a plot of land off Chittaranjan Avenue, Calcutta, and for having extolled the flag with salutes and shouts of revolutionary slogans. The Magistrate delivered an important and lengthy judgment, in the course of which he ovserved :

> "Great stress has been laid by the prosecution on the hoisting of the Soviet Flag and the homage paid to it. This is said to amount to sedition. I fail to see how this is so. Soviet Russia is a country at peace with His Majesty's Government and extollation of the Soviet Union or its flag cannot be said to be any more objectionable than the extollation of, say, the Nazi regime in Germany or the Fascist regime in Italy or the Republican system of Government in France or the United States of America. I do not agree that such extollation gives rise to any implication of contempt or hatred of the existing system of Government in India."

Mr. Subhas Chandra Bose Not Permitted to Return

On account of the very serious illness of Mr. Subhas Chandra Bose's father, his (Mr. Subhas Bose's) mother had asked Government to permit him to return to India to enable him to see his father. "The *Associated Press* understands on inquiries made in responsible quarters that Mr. Subhas Chandra Bose will not be permitted to return to India at the present moment." Government's decision is to be regretted. Mr. Subhas Chandra Bose's return and stay in India for a few days would not have injured the State to any extent.

Probable Future Status of Irish Citizens

An Irish Citizenship Bill has been introduced in the Irish Free State Dail. Its passage may be taken to be certain. With reference to such an event *Reuter* has sent the following cable :

> LONDON, Nov. 29.
>
> 'After the Citizenship Bill becomes law, nobody in the Irish Free State will be a British subject', declared Mr. de Valera in the Dail yesterday; "otherwise all the principles agreed upon by previous Imperial Conferences would go by the board."
>
> Continuing, Mr. de Valera said, "It will be impertinence for the British to call Free State nationals British subjects after the Bill becomes law."—*Reuter.*

Bengal Cotton Mills Faced with Crisis

The Bengal National Chamber of Commerce have addressed a lengthy representation to the Government of India, Commerce Department, on the subject of the proposed reduction of import duties on British piece-goods, which concludes thus :

> "The Bengal Mills would be the worst sufferer in case any further reduction is allowed on the duties of British cotton goods. The Bengal Mills drawing their supply of cotton from distant provinces at considerable cost supply the local markets and the proximity of the latter to the Calcutta port dangerously expose the mills in this Province to foreign competition in so far as any reduction in the duties on imported goods must, from the very nature of the case, bear its fullest effects on port markets as well as places within easy reach of ports. While thus a reduction in duty would threaten the Bengal mills with the most intense form of foreign competition the latter are the least equipped to withstand and survive the shock as the cotton industry in this province is not fully developed and must yet take some time to attain its deserved measure of expansion and consolidation."

Madras Women's Conference Support Sarda Act

> MADRAS, Nov. 3.
>
> "Our conference does not engage itself in party politics but deals with all questions relating to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

welfare of women and children. Hence women of all shades of opinion and all parties may find a place in this body," observed Mrs. Muthulakshmi Reddi addressing the annual conference of the Women of the Madras constituency of the All-India Women's Conference in the Senate House today. The conference passed a resolution expressing its wholehearted support to the Sarda Act, and pledging itself to ensure its successful operation. At the same time the conference urged it was absolutely essential for the operation of the Act that it should be amended to render its working more effective.

A Course in Journalism

The Indian Express of Madras writes :

At the Senate Meeting of the Madras University, a resolution was moved by Mr. V. Ramanathan asking the Syndicate to take early steps to institute a degree in journalism in consultation with the Academic Council. The idea was warmly supported and the resolution has been referred to the Syndicate for consideration and report.

As was remarked by one speaker, the profession of journalism is bound to be of increasing importance in our country. When literacy spreads, it will be able to absorb annually thousands of gifted young men and women. It is, therefore, but just that the University should make a beginning in the provision of facilities for entering a journalistic career.

Efforts are also being made to introduce courses in journalism in the Calcutta, Bombay and Annamalai Universities.

Legal Disabilities of Women

November 24 last was fixed by the All-India Women's Conference for the observance of an All-India Day for discussing the legal disabilities of women. Meetings were accordingly held at various important centres. The Calcutta meeting was attended by men and women alike. Lady Sircar, wife of Dr. Sir Nilratan Sircar, presided. She pointed out that

"Indian women of the present day did not base their claim for the removal of legal disabilities on the great rights and privileges enjoyed by Indian women in the past. It did not matter whether the Sastras sanctioned their claims or not. The women's demand for the removal of the legal disabilities was based upon justice and equity. It was high time that Indian women asserted themselves for the removal of their legal disabilities."

Other speakers followed. A resolution urging the Government to appoint an All-India Commission to enquire into the legal disabilities of women with a view to amending the existing laws was unanimously adopted. Such a commission should be appointed. It is hoped that the ladies who ask for just rights, and quite justly and naturally so, will be prepared to perform the duties attaching thereto and shoulder the domestic and public burdens which are bound up with those rights.

William Carey Centenary

On Saturday the 24th November last a crowded public meeting was held in Overtoun Hall to celebrate the centenary of the death of William Carey, the pioneer Protestant Christian Missionary in Bengal. Mr. Ramananda Chatterjee presided. The proceedings began with a hymn of praise in English sung by "children of many lands," appropriately dressed. Principal J. R. Banerjea spoke in English on Carey as a Missionary. Miss Jyotirmayi Ganguli, M. A., paid her homage of respect to Carey as a social reformer. She spoke in Bengali. Mr. Arthur Moore, editor of *The Statesman*, traced the close connexion of his paper with Carey, who was the founder of the *Friend of India*, which was now merged in the *Statesman*. Professor Priya Ranjan Sen, speaking in Bengali, confined himself to describing Carey's contribution to Bengali literature. Carey helped the growth of the Bengali language, said Mr. Sen, not only by his translations but also by writing a Bengali grammar and a Bengali dictionary. Dr. Urquhart dealt with Carey's educational activities, observing that it was his work as a missionary which made him an educationalist. Recalling that Carey was the founder of the Agri-Horticultural Society of India, Mr. Percy-Lancaster said that he was mainly instrumental in popularizing the cultivation of European vegetables, such as green-peas, carrots, cauliflowers, cabbages, etc., in this country. Sir Hasan Suhrawardy said that Carey's life held the great message for the India of today that there were many spheres in which men of all races and religions could work in harmony for the progress of the motherland. Principal Angus referred to the genesis of the founding of the Serampore College. Carey established 126 Vernaculer schools with 10,000 pupils.

After describing how Carey and his colleagues founded the college at a cost of £15,000, all contributed by themselves, and how the Royal Charter was obtained by Marsden from the then King of Denmark, Mr. Angus said that when they thought over Carey's educational work what struck them most was his comprehensiveness and the modernness of his views. "Most of all Carey wanted to see run through all his educational work the spirit of religion," concluded the speaker.

The president, speaking in Bengali, said that on reviewing Carey's life, the thought that impressed itself on his mind was that although he came to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a foreign land, he served it wholeheartedly. "If we Indians, each one of us according to his capacity, do our little bit for our country, then we will be paying true tribute to his memory."

He also referred to his great versatility, and pointed out that, just as Carey, the cobbler, was revered, so were many Indian saints of lowly origin revered, nay, worshipped, in this country.

Rev. W. Carey, a great-grandson of Carey, speaking both in Bengali and English, said that if his illustrious ancestor had been present at the meeting, he would have been grateful for the kindly feeling displayed towards him by the audience.

At intervals of speeches there were Bengali songs sung.

Hindu Widows' Home at Puri

The Bihar and Orissa Government have done the right thing by sanctioning a monthly grant of Rs. 50 to the Lady Basanta Kumari Hindu Widows' Home at Puri. Perhaps when financial stringency will be over, that Government will increase the grant.

Congress and the Indian States

In a statement issued by him Babu Rajendra Prasad, the Congress President, has explained the attitude of the Congress towards the Indian States. Says he :

> The position remains unchanged since the Calcutta session of the Congress defined its attitude towards the States in 1928. By the resolution which it passed at that session the Congress urged the ruling Princes in the Indian States "to introduce responsible Government, based on representative institutions, in the States and immediately issue proclamations or enact laws guaranteeing the elementary and fundamental rights of citizenship, free speech, free press and security of person and property." It also assured the people of the States of its sympathy with the support to their legitimate and peaceful struggle for the attainment of full responsible Government in the States.

This is a correct statement of the Congress attitude and policy six years ago. But on account of the possibility of an All-India Federation, autocratic rule may be indefinitely prolonged and strengthened. Will Congress do nothing actively to enable the people of the States to obtain at least as much freedom as the people of British India ? Will Congress remain satisfied with merely exhorting the Princes to be constitutional rulers and with assuring their subjects of its sympathy ? These questions have to be answered.

Crimes Against Women

A resolution adopted at the annual meeting of the Calcutta constituency of the All-India Women's Conference stressed the necessity for taking special measures to put down the growing evil of crimes against women. Public opinion has for years demanded effective measures. But nothing has yet been done. Of course, the law as it stands may be more effective, if properly enforced. In a recent case at Howrah Mr. S. N. Modak, I.C.S., sentenced one scoundrel, guilty of abduction and rape, to transportation for life. That is the kind of deterrent punishment needed. In addition there may be flogging, and also emasculation, as in Germany.

Mahatma Gandhi on Village Industries

> "As the author of the Congress resolutions on village industries and as the sole guide of the association that is being formed for their promotion, it is but meet that I should, as far as possible, share with the public the ideas that are uppermost in my mind regarding these industries and the moral and hygienic uplift that is intimately associated with them."

Mahatma Gandhi begins with these words an article on village industries in *Harijan*. He elucidates in the following passage his opinion that cotton mills have taken the bread out of the mouths of villagers :

> Mechanization is good when the hands are too few for the work intended to be accomplished. It is an evil when there are more hands than required for the work, as is the case in India. I may not use a plough for digging a few square yards of a plot of land. The problem with us is not how to find leisure for the teeming millions inhabiting our villages. The problem is how to utilise their idle hours, which are equal to the working days of six months in the year. Strange as it may appear, every mill generally is a menace to the villagers. I have not worked out the figures, but I am quite safe in saying that every mill-hand does the work of at least ten labourers doing the same work in their villages. In other words, he earns more than he did in his village at the expense of ten fellow-villagers. Thus spinning and weaving mills have deprived the villagers of a substantial means of livelihood. It is no answer in reply to say that they turn out cheaper, better cloth, if they do so at all. For, if they have displaced thousands of workers, the cheapest mill cloth is dearer than the dearest khadi woven in the villages.

Indianization of the "Indian" Army !

LONDON, Nov. 7.

In the House of Lords today, replying to Lord Strabolgi, who asked for information regarding the progress of the Indianization of the army and enquired what developments were contemplated, Lord Halifax, for the Government, reminded the House that the interests of India were too vital to allow of any step which would endanger the efficiency of her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

defence forces, but, subject only to this, it was the British Government's purpose to continue the programme recently laid down, with the approval of the Government of India and the British Government, by the Commander-in-Chief in India, and any suggestions that hesitation to proceed more rapidly arose from prejudice or vested interests were entirely without any solid foundation.—*Reuter.*

Indian public opinion cannot accept the plea that it is only in the interests of India and in order to keep the army in a state of efficiency that it has not been Indianized. Nor is it at all obvious that the present Commander-in-Chief, Sir Philip Chetwode, whose scheme postpones indefinitely—perhaps to the Greek Kalends—the complete Indianization of the army and who asked on September 5 in reply to a critic in the Council of State, "Do he and his friends think that a war-worn and war-wise nation like the British, who won their empire at the point of the sword and have kept it by the sword all these years, are to be turned aside by arm-chair critics?" is free from prejudice and uninfluenced by "vested interests." Is keeping India for Britain "by the sword", to use his words, a disinterested act, or has it got anything to do with vested interests? It is a funny idea that the most intelligent, best informed and most patriotic Indians care less for the interests of India than any Englishman!

As for "efficiency," the Shea Committee, all of whose members were experienced and seasoned military officers, thought that the Indian army could be completely Indianized in thirty years, and of course without impairment of efficiency. Another Committee, presided over by Sir Andrew Skeen, also a distinguished military officer, thought that the army could be Indianized to the extent of 50 per cent by 1952 without loss of efficiency. Why were the opinions of these committees brushed aside? And if their opinions were to be brushed aside, why were they at all appointed?

Dictionaries of Indian Languages

Some time ago we read the following two paragraphs in some papers:

It is understood that the Government of India have lately forwarded a letter, which in their turn they had received from the India Office, London, written to the latter by several important literary associations in England; including the Royal Asiatic Society of Great Britain and Ireland, the Council of the Philosophical Society and the Academic Board of the School of Oriental Studies, to all Provincial Governments, asking them to bring to the notice of the educational bodies in their respective provinces the desirability of encouraging lexicographical and other work on the languages of India.

The points which these bodies have particularly stressed are that some of the important languages of India lack satisfactory dictionaries; that the existing good lexicons are in urgent need of revision and that many of the less known languages and dialects are likely to die out without ever having been adequately recorded. The London School of Oriental Studies, it has been further pointed out in the letter, is prepared to lend advice and co-operation of a body of scholars engaged in the teaching of and research into the Indian languages.

Some years ago the Nagari-pracharini Sabha of Benares undertook to publish a comprehensive dictionary of Hindi. Perhaps it has now been completely published. Under the munificent patronage of the Maharaja of Gondal a comprehensive lexicon of Gujarati was projected some years ago. Perhaps this, too, is complete. Mr. Gopal Chandra Praharaj of Cuttack has been publishing a large Oriya dictionary, with Hindi, Bengali and English equivalents, with the help of the Maharaja of Mayurbhanj and the Bihar and Orissa Government. We have seen and noticed three volumes of it. We also saw at Cuttack last year that the fourth volume was much advanced. Perhaps all the six volumes are now available. A comprehensive dictionary of Bengali is being published by Pandit Hari Charan Bandyopadhyay of Santiniketan at his own expense. It is too costly an undertaking for a poor pandit. The Government of Bengal, the Tripura State, the Cooch Behar State, and the rich men of Bengal could have helped him.

Abolition and Existence of Slavery

A century ago, on and from the 1st of August 1834, slavery was abolished in the British Empire. But Lady Simon has recently written in *The Manchester Guardian* that "today there are probably more than five million persons over whom somebody holds a 'property' right."
